Yes, but hooking up the video key to a video converter may give you what you
want. BTW, just what are you trying to do?

I know this is a dumb question, so forgive me for asking, but it is
plugged onto the keyboard header correctly, right?

Reason I ask is I made the same mistake myself when I was re-casing my
Falcon in a Wizztronics rack case.

It acted something like you describe.

How did you find out?

Are they connected with the SETI Classic Team Atari?

>>
>Its still there
>
```

>http://setiathome2.ssl.berkeley.edu/fcgi-bin/fcgi?cmd=team_lookup&name=Team%20At
>ari
>
>Mark

The Classic web site can be accessed here -

Http://seticlassic.ssl.berkeley.edu/

The new BOINC-SETI 16 membered Team Atari web page is at -

http://setiweb.ssl.berkeley.edu/team_display.php?teamid=30472

I fully support the "working together" appeal to join the current Team
Atari i9f moving to BOINC. When I settle down I will.

I have a extra Expose Digitiser original Manual and original Disk
software if anyone is interested.

This manual and software is for use with the Titan Designs Expose
Digitiser.

This is the Digitiser/Splitter setup Manual and Disk only.
No digitizer or Splitter.
The Disk includes Demos, and a few programs for use with the
Digitiser such as FALCAM, which puts the Video Display from the
Digitiser on the Falcons DeskTop.

I have around 3 of these and will part with one Original Manual and
Original
Disk with software that came with the actual Expose Digitiser and
Splitter.

This is a nice item for collectors, or for someone with ApexMedia.

If anyone is interested, I may trade to Atari STe-Falcon Items or Cash.

If interested send list of items for trade or amount of offer to me at:
phantomm@bellsouth.net

Looking for something like SoundPools DSP hardware for the Falcon030 that allows more inputs and outputs that has better electronics for D2D/Music Recording.

A number of companies made similar hardware devices such as Steinberg, Line Audio with the JAM 8, or the FAD.

Something similar to these to connect to a Falcons DSP.

Also looking for the Digital Home Studio with or without the CD.

I have various items to trade or cash if price is right.

Contact me in private e-mail at:
phantomm@bellsouth.net

I have been looking for a program for the Falcon030 called 4T/FX and D2D Edit.

This program is by the same folks that did the Falcon D2D program, that was supplied on the Original Falcon Disk when one bought a Falcon new.

It is listed in the Toad Catalog page 43. Its a small ad on the bottom of the page in the Version 3.42 Catalog. (Yellow Cover)

Anyway, its a program that I'd really like to get.

If anyone has it and wants to make a deal or trade for it, do contact me at phantomm@bellsouth.net

```

This will be my last posting for awhile to give you all a break.

I am still in the market for Non-working Atari Falcon030s and related hardware.

Just about any Atari hardware even upgrades are wanted.

Contact me if ya have something that ya no longer want.

phantomm@bellsouth.net

I have not CT60, I tried it on clean Falcon.

best regards

If it works for others on plain Falcons and even works on upgraded Falcons
then I'd wonder if maybe it wasn't corrupted somehow when you downloaded
it? Download it again and see. Wouldn't hurt and you'd rule out another
cause.

Good luck.

What settings did you use? I couldn't get it to run, no matter what I
did, on my CT60. It ran fine on 030 mode, though. So I thought it had
some odd compatibility issue with the 060.

Also, for previous poster, I'm using a mulisync VGA monitor. As long as

I'm running it in standard 030 mode, it runs fine on it, so RGB/TV
isn't necessary.

Thanks!

Hey Patrice! It works fine!!! Thanks for this new compilation. Just 3
comments:

- It runs only if I add the '-audio off' parameter. Otherwise it
freezes at the splash screen.
- It is definetly slower than the previous version. Even slower than
pmQuake.
- On exit it generates a bus error and fails to restore the color
palette. (complaining about something like 'SDL Parachuting')

Thanks again for your efforts !

Yep, audio makes it crash.

I know that.

Mint 1.16.1, N.AES 2, NVDI 5, N.Thing
CT60@95MHz, accelerated bus

During gamplay I experienced no errors, only on exit.

I just have had a very short try with pmdoom.
It seems to run on Hades (freeMiNT 1.16.3/XaAES latest CVS version).
At least I can launch it but playing is almost impossible. Deadly slow.
But as I only tried it very short it can be I've to set a parameter.

Another info:

H20 seems very sensitive about CPU clock. Runs on 66mhz, but on 100 or 90 it jump in loop after i enter the name...

None. There was no Arari ST 1024.

But, theere was Atari 1040 ST, and it used TOS 1.02 and 1.04 IIRC. You could also upgrade it on your own to 1.06, 1.62, 2.05 or 2.06.

I think you mean the 1040. It began using TOS 1.0. I have a 1040STe that uses
1.6.

Hi NG

I have found a pleothora of original classic Atari ST Games, that some of you may be interested in:

The hole lot can be your�s for the symbolic price of 10 usd/eur depending on what you prefer! (excluding shipping).
I only sell the whole lot!

All games come boxed with full documentation and memorabilia! Most of them have never been used.

See picture here: www.msystem.dk/images/AtariGames.jpg

Sincerely
Peter Hjorth Feddersen

Gamelist:
The Ancient Art of War in the Skies: The World War 1 Strategy & Action Game by MicroProse Simulation Software (1992)

SDI: Now the odds are even by SEGA/AcTiVision

MicroLeague Wrestling by MicroProse Simulation Software (1987)

Their Finest Hour: The battle of Brittain by Lawrence Holland - An historically accurate, action-packed air combat simulation by Lucasfilm Games (1989)

Skyfox by Ray Tobey/Electronic Arts/Ariolasoft (1984)

Skyfox II - The Cygnus Conflict by Dynamix/Electronic Arts (1987)

Terminator 2 - Judgment Day by Ocean (1991)

Corporation by Core Design Limited (1990)

The light corridor by Infogames (1990)

Pinball Dreams by Digital Illusions/21st Century Entertainment Ltd. (1991)

Cruise for a Corpse by Delphine Software (1991)

StarBlade by Simarilis (1990)

Cybercon III by U.S. Gold (1991)

Infestation by Psygnosis (1989)

Crime Does not Pay by Titus Software (1990)

Carrier Command by Rainbird Strategy Simulation (1988)

520 STe Turbo Pack :
Games Disk 1: Indiana Jones & the last crusade by Lucasfilm Ltd. (1989)
Games Disk 2: Dragons Breath by Palace Software (1990)
Games Disk 3: Blood Money by Psygnosis (1989)
Games Disk 4: Anarchy by Psygnosis (1990)
Games Disk 5: Outrun and Super Cycle by SEGA (1986)
Games Disk 6: Impossible Mission II by Epyx Inc. (1988) and Human Killing Machine by U.S. Gold Limited (1989)

```

Would anyone be interested in a 4.2 GIG SCSI III 68pin Baracudda Hard
Drive?

I bought a LOT of these and have a few that I don't need.

These are in like new condition. These are 3.5 drives and are great for
D2D recording on
the Falcon, or for use on a TT or other Atari using HD Driver.

If interested, contact me for price. I may let up to 3 of them go.

These are fairly hard to find in like new condition.

If interested contact me at:
phantomm@bellsouth.net

>Which TOS version did the Atari ST 1024 use?  Thanks.  :o)

Was there such a machine? I thought all 1024 were at least STFMs
or STEs. But the likely answer is 1.02 or 1.04 for later ones.

Regards, /Peter/

How do you upgrade a 1040 to TOS v2.06. I mean TOS 2.06 comes on a pair og Eproms, whereas the older TOS in 1040 fills out 6 Eproms or so!

Sincerely
Peter, Denmark

To fit TOS to a STFM you need a bit of address decoding to get it to work,
since 206 is larger than TOS 1.4.
Fitting 206 to a STE you just alter a couple of jumper links and bung in
your Eproms.

Chris

One megabyte is 1,048,578 bytes. So the Atari 1040 ST is actually
rounding *down* for the number of bytes. Of course, 1024 kilobytes
is one megabyte, so...

I guess the proper answer is which evcer was current when it was made. Were
any 1meg machines produced with disk TOS?

I have a extra Atari VIDEOMASTER FALCON Cartridge with the
RGB SPLITTER and Original Software and BOX.

This is the Falcon only version.

The Cartridge and Splitter and Manual is in like new condition.

These are fairly rare now.

This is the only unit that I know of that will record video and Audio at
the
same time and put it all into a playable format.
Comes with a PD player so you can give out your demos.

It will also, take TC Color Images from a Still Image source such as a
VCR, DVD, Video Camera or etc.

The software has great Audio features alone.
The software for the video will allow you to import color stills.

There are several Video, Audio, and picture outputs.

Don't miss this one if you are into Video with Audio on the Falcon!!

Contact me at:
phantomm@bellsouth.net

Patrice,

Great work! This one now works perfectly fine on my 66MHz/25MHz bus CT60 Falcon running Magic 6. I haven't seen it crash yet, which is more than I can say for previous versions. Unfortunately, as many have noted, including you, it's pretty slow compared to older versions. Still very playable, but not as fun. It's about as fast for me as Running was on a stock 030/DSP machine. Both GEM and Full-screen modes work well now.

Hello,

For a wiki currently in the works, I need a bit of information about
various TOS versions:

ST: 1.00
MegaSTE: 2.02,2.62
TT: 3.01,3.05,3.06
Falcon: 4.00,4.01,4.03
Medusa/Hades/Milan: any version

For each version, I need date of creation, language/country, gemdos
version and aes version. You can have it with any sysinfo-type
program. Thanks.

You can have a look at the current page there:
http://removers.free.fr/wikipendium/wakka.php?wiki=TOS

Yes, the 520ST+ in 1986. It was a 520ST with 1MB of RAM and diskbased
TOS so the machine was at least partially usable.

Hi NG

I have two MEGA STe�s. One with an English TOS 2.06 and one with TOS 2.05 in german.

I want to reprogram the German TOS 2.05 with the english one. Is it legal?

How do I make two separate binary files containing the English TOS2.06, both EE and EO?

I have tried a number of TosDump programs, but they only seem to generate one single *.img file containing both EPROMS (mainly for use in emulatoin programs)!

Any help would be appreciated!

Thanks.

Peter, Denmark

????? Why do you even bother to ask? You own both machines!

>How do I make two separate binary files containing the English TOS2.06, bo=
th EE and EO?

>I have tried a number of TosDump programs, but they only seem to generate =

rograms)!

Either use an eprom programmer to dump each chip seperately, or get a
program off the net that will split the TOSDUMP image into its high and
low counterparts. If you are sending the eproms and code to someone to
burn them, they will probably do this for you anyway.

Theres a TOS ROM site somewhere, I can't remember the URL though it has them
all I think... maybe someone here can point you to it, or you could google

for it...

Hey Barry, is this the one/format you used for that animation of the
clouds passing by? The one you uploaded to my BBS a few years ago?

Just curious. :-)

So I've bought the Compact Flash cards and the dosh will be sent off to Paskud later on this week ..

The only sticking point I can see is how am I going to power up the Compact Flash cards (they need small IDE floppy psu cables) .. do I get a cheap and cheerful PC PSU and just use the floppy ports from that or is there a way to cobble together a 3.5" USB h/drive adapter to make it work that way?

You could quote just the item numbers, use a Tiny or similar service,
or put the URL in angle brackets like this: <http://www.notarealurl.com>

It can be done. But you'll need software that is aware of this, otherwise
it's useless.

>Are you saying that the clock (8 or 16 Mhz) of the FDC chip

>switch in the floppy drive is at?

Yes. But not exactly from the switch itself. From the HD signal at the
Shugart connector.

Ron,

Found the manual, I will scan it in tonight and post a link. I will
try B&w scan with jpg or PDF if possible.

Hi all,

```
Yes the ICD site is for information only. They do PC stuff only now.
Its been about 2-3 years since I talked face to face with Tom Harker.
I actually got the last 2 ICD Link II's ever made. I had to do some
serious arm twisting, but drove to Rockford and picked them up.

There were several versions of the ICD host adapters, some custom made
for Hybrid Arts hardware. Some would only recognize smalll hard drives
for the digital recorders. I just had one mysteriously die last week.
I'm going to try and do a parts pull/replace type of repair.

Hello,

Just wondered if anyone had rack mounted an STFM/Falcon board and gubbins?

Seems feasible. Not sure why though, why not I guess. Might fit in with a MIDI pro setup with a MSTE / TT keyboard.

<http://www.maplin.co.uk/Module.aspx?ModuleNo=34159&doy=5m7>

http://www.old-computers.com/museum/computer.asp?st=1&c=789

http://www.keychange.co.uk/ (oooh yummy)

http://www.myatari.net/issues/nov2002/spcase.htm

I wonder how many ST's on here will become 19" monsters having read this..

Basically the concept behind Wizztronics rack mount case for the Falcon.
I've got one, its awesome, (too expensive) but awesome, none-the-less.

I think i have one of these kicking around from the Cosby Show.  I'll see if
I still have the software.

Thanks
David

Why open a new service with custom protocols and overhead when there is
already IRC available? One can choose the client to use and it offers
all what one can expect for chatting....and IRC networks tend to be up
all time while a single custom server might be down for some time, esp.
when running over your private cable line ;)

You can get power from the PSU of your atari. I could feed an 3.5' HDD
using my MegaST's PSU.

I have accomplished booting from compact flash with my 1040STe. The hardware I am using is as follows:
ICD Link II, Apple CD-ROM, Microtech Digital Photoalbum P, PCMCIA adaptor for compact flash, 64 MB compact flash. The Apple CD-ROM provides termination power for the Link II. I am booting with ICD Pro drivers, although HDdriver may be a better solution. I haven't tried it yet. The one thing I "tweeked" - I set retries to 4 in the driver. This setup is totally silent, and surprisingly fast. Only time will tell how reliable it will be.

This also provides me with a silent 130XE, as I use 800XLDeeJay software on the STe with an SIO2PC cable to serve files and programs to my 130XE.

I know it is slower that previous versions (at least when you don't have
FastRam). Maybe the program flags are not taken into account. In next
version, I will force allocation to FastRam if available.

> Under FreeMiNT (botch Xaaes and Naes) I get black screen (in plannar

> CTYL-ALT-DEL.

If it is slow, maybe you are not waiting long enough, try to run with:
'-devparm -audio off -warp 1 1' to start first level.

Why should everyone use IRC? I for one do not like it that much, and
cannot connect to IRC from work anyway, whereas Telnet, I can.

Anyway, why cant the man set up his own chat server? Thats like saying
dont bother designing another car, because there are so many good ones
already.

Coda

Yup, I'm going to put a Mega STe in a 19" rack enclosure.
It's a little bit too wide to fit the normal way (it's around
60cm wide if I recall correctly), but if I find a very deep
enclosure it'll work fine by placing it sideways, which is what
I'm going to do.

I've asked around, and apparently there's no general limitations
to the 19" standard when it comes to the depth of a unit.

I still haven't found a 19" rack enclosure to fit my specs
though, so who knows -maybe I'll end up building my own.

I have to say, I'm glad he did. I've not been able to connect to atariscne
once from where I'm at, despite numerous attempts at help from others on
this list. I had just about given up directly chatting to fellow Atari
users (other than the 1 to 1 chat on my BBS).

According to Robert Schaffner's faq, the pinouts are the following:

```
Standard PC power connector : red    + 5V
                              yellow + 12V
                              black  GND
ST, STE, MEGA, MEGASTE, TT  : red    + 5V
                              yellow + 12V
                              black  GND
```

You can simple solder the power cable to the PSU of your atari. (double check not to mix the cables !!!!!)

Hope this helps.

You could always use a standard open rack frame which will allow a server
to protrude in the rear.  I can't imagine though that our 1U HP servers
are longer than an ST in a rack mount case would be mounted sideways (so
ports on the motherboard face left or right side).

Thanks,
Mark

Hi,

> Genesi made it. Pegasos is not sold

I took a look at the homepage of bplan and genesis. The board of the Pegasos
was made by the german company bplan. The company is not far away from my home.
Genesis assembled the Pegasus based on the bplan board.

> as Amiga, but it is a clone.

Yes, it was not really exact what i wrote.

Regards
Michael

Is there anyway you can post a piccy of the card? I may have one
floating around i don't need (got 1 in a EBAY bundle) it might be what
your looking for

Have you checked the wide of an STFM board. If I remember properly its just

too wide to fit easily in a 19" rack.
Not sure how Barry manages it. His case looks the right price...

Hi
I also have some similar hardware without any manuals or software.

An ADAP Soundrack that plugs into the cartridge port, and a Digital F/X Digital Master EX system. No leads/cables or software/instructions. Only just got it and still figuring it out.

Rory, is this the same system you have?

I've found reference to a review in Electronic Musician April '93,
but living in the UK that mag is hard to find.

Any help would be much appreciated.

Mark (II ?)

Good point ;)

The game still crashes, giving the following error under FreeMiNT/XaAES:

```
pid   39 (doom): PRIVILEGE VIOLATION: User PC=17B6D9E
(basepage=1770000, text=1770100, data=17E7C94, bss=180681C)
```

(At first, after the game has initialized, I get a black screen. If I hit ALT+CTRL+TAB to switch to another process, I see some garbled up graphics in a GEM window. Less than a second later, I see the crash message as qouted above)

Regards,

/Joakim

Mark,

I have two ADAP II's and a Digital Master setup. I may have a Digital

Master zip file somebody had sent me some time ago. I am in the
process of looking for it.

Apparently the manuals are big and hard to find. i have the connecting
pcb to the cart port. It is a straight through ide cable surrounded by
copper foil for shielding. It has to be a short run due to buffering i
believe. I also think the cable connecting the hardware is a straight
through serial cable.

I wont know for sure until I can find the software. Im sure somebody
has a working setup of these things...

Rory

Is it just the clock that's changed? ISTR that you also had to
alter the step-rate from 3 to 6 ms for HD disks to counteract the
higher clock-speed (or is it the other way round?). I had an HD
conversion fitted on my old STFM and ISTR it made some strange
noises with the 'wrong' step-rate, and also slow access if left
on 6 ms with DD disks - but it's years ago and though I still have
the machine as a spare I haven't used it for yonks!

Regards, /Peter/

Its the right price, but make sure you get one thats more or less finished, or else you will spend hours/days in the garage with a angle grinder, drill, file etc. The other thing to watch is that there is no way to screw in both sides of the floppy drive AND the cd drive, its one or the other.

It's already done with two Falcons and their CT60, here are some
pictures:

http://strider.mjjprod.free.fr/photos/hardware/rack_gwile/
http://strider.mjjprod.free.fr/photos/hardware/rack_shazz/

These racks are SpaceCases, as mentionned in MyAtari's article, really good
racks for Falcon indeed.

See you
St�phane

Does anyone know what the last version of Band in a Box for atari was,
and do you like it? Is it useful? I'm a CAF man, but I had someone
suggest that BIAB was a good tool for learning jazz piano, and wondered
about it for my Falcon.

You were told you were buying a bare case and it would need about 10 hrs work and basic metalworking skills.

What do you expect for �25?

> The other thing to watch is that there is no way to screw in both sides
> of the floppy drive AND the cd drive, its
> one or the other.

Wrong, you just couldn't figure it out.

For Info.

The case is specially made to take the ST and Falcon mobos. There is also a way to make a Mega STE mobo fit but again you need basic metalworking skills.

I have a few cases left, email for pics and assembly details.

Cod, before you spout any more c**p send me pics of what you did to my case.

Sweetie Pie, just don't....

Hi all,

Yesterday, I have download new game for falcon.
But I have problem with it. I could launch I have seen title screen I
choose play, enter the name and then I see only black screen, the sound
stop. Does anybody have the similar problem or only on my computer ?

Best regards

Piotr Mietniowski

Actually I think there's a better chance of finding other ADAP II users in *music* related newsgroups. Just because it runs on the Atari ST platform doesn't mean that everybody who uses it is an Atari enthusiast.

I run the Notator mailing list (C-Lab/Emagic "Notator SL" and "Creator SL" MIDI sequencing software), and I dare say most of the members there don't hang out in any Atari related forums. They just use Notator as a musical tool which happens to run on the Atari ST.
By the way, if anyone's interested in joining or checking out the website, here's the URL: http://www.notator.org

There are several computer-music/synth related newsgroups. I'd suggest posting to this one first: rec.music.makers.synth

Hi all,

Once, I have had a pretty good (German) disassembler for the ST called
"LOKOMOTIVE".
Then I damaged that program because I didn't know what I'm doing...
maybe while experimenting with a resource editor.
The executable file was named "DETECTIV.PRG". Does somebody know where
can I find it again?

Thank

I found the source of the problem: Xaaes does not generate MU_TIMER events, so I am stuck in a neverending loop (except when you open a menu, try this!).

Similar problem with CT60/Mint/NAES.
+ Watching the demo of the game, there is garbage pixels around the sprite of my "flying man".

I don't know if the game should work with CT60. I'll try it in 030 mode.

What else would you like to know? It's working great, just like a
hard drive, but silent. The Microtech Digital Photoalbum P card
reader is the single slot variety, accepting type II or III pcmcia
cards. It's an external device. I can eventually put a picture on

my website. I was surprised to find that the card reader even provides termination power to the Link II, so you don't need any other SCSI devices attached. The reader itself fits in the palm of your hand, so it would be a great option for carrying your data with you to try on other systems. I also tested the reader on my Falcon with HDDriver, and it worked great there as well.

Hi Barry,

Just a friendly advice: By using such comments yourself, you are most definately ruining our own repuation in public here. Keep in mind that someone running a business, is there for the customers - not the other way around.

Regards,

Joakim

I get the CT63 2 days ago, and there is a big problem :
A short-circuit between the 3.3V and GND planes !
I don't know if it is inside the PCB or external... Maybe the cards must be thrown away or if it will be possible to modify them.
I think it is a PCB manufacturing problem... not a problem from soldering from assembler or design from me.

I cannot give now the new delay to ship the boards.

Unlikely it's you since it's same design as the perfect CT60. And that's
a tough mistake for the assembler to make over and over again (unless they
use robotics).

Barrie.

I asked you several times to show me just how you are supposed to screw in both sides of the floppy drive AND cd drive. You never responded with anything other than insults. As I dont like taking abuse from morons I didnt press the matter, so YES I havent figured it out. However, I will be at Jagfest UK this year, with my Falcon, so you are welcome to come down and demonstrate the solution - not that I believe there is one that doesnt involve glue of some description.

If I can be bothered (read: find time) when I have more pressing matters, I will take pics and post them on my website for EVERYONE to see. If ppl are genuinely interested and email me for pictures, then I will oblige.

Coda

Barrie.

PS. You DID NOT SAY 10 HOURS. I would have told you to F**K OFF. 10
hours of my time is worth a lot more than =A325, I would have paid a
huge sum to get a wizztronics case from the U.S instead rather than go
through this crap with a cantankerous old narcotic smoking of
questionable hygiene looking pleb.

Have a nice day.

> supposed to screw in both sides of the floppy drive AND cd drive.
> You never responded with anything other than insults.

Moi? Insults? Never! Plain speaking maybe.

> As I don't like taking abuse from morons I didn't press the matter,
> so YES I haven't figured it out.

See below re your grossly overvalued selfworth.

> However, I will be at Jagfest UK this year, with my Falcon, so you are
welcome to come down and demonstrate the solution - not that I believe
there is one that doesnt involve glue of some description.
If I can be bothered (read: find time) when I have more pressing
matters, I will take pics and post them on my website for EVERYONE to
see. If ppl are genuinely interested and email me for pictures, then I
will oblige.

Tell you what, matey. Post the pics now and let's all (that's interested)
see your handiwork.

Anyone else want my pics, email me.

First person to suss out how to fix your problem (?) wins a coconut.

PS. You DID NOT SAY 10 HOURS.

Actually, I DID, as I tell everyone who enquires about the bare case.

I also sent you pics and the instructions.

> I would have told you to F**K OFF.

Yeah, of course you would.......1

> 10 hours of my time is worth a lot more than �25,

Judging by your literary skills methinks you grossly overvalue yourself.

> I would have paid a huge sum to get a wizztronics case from the U.S

Yeah, of course you would.......2

> instead rather than go through this crap with a cantankerous old narcotic
> smoking of
questionable hygiene looking pleb.

Attended the same (approved) school as sweetie pie?

Have a nice day

Thank you very much, ahah. Just like that, ha ha ha ha.

Where's me fez?

Next.....

It went t*ts up years ago, ask sweetie or the late vermin et co.

> Keep in mind that someone running a business,
> is there for the customers - not the other way around.

So that's what I been doin' wrong, shucks!

Seriously, this list and the Sound on Sound forum are simply sources of light entertainment for me.

Keychange Music is now a paying hobby.

If I can help somebody.........

You meet the odd idiot or 3.

You get the odd deal that goes pearshaped, usually sorted easily.

Any one want a Falcon Mk X or a TT?

Barrie.

I'd hate to think i had anything to do with your squeaky clean reputation
being tarnished, I'd never play with myself again if i did!

It's just a card with two cable connectors for atari cables on one end and a
ribbon connecter for the drive. Has ICD in big letters on board, no cover to
it at all.

Sounds nice Joe,

Something I wouldn't mind trying in the future.

Anyway have a question.

I have a SIO2PC adapter board.

Am I reading you correctly that you are using it on your STE with
the 130XE to transfer files?

If so, is only the 800XL DeeJay software needed to do this?

I have a bunch of similar software but not sure I have the
800XL DeeJay software. Can you provide a URL for it?

And is the also a Atari 8-bit software emulator for the STe?
Or am I thinking of another piece of software?

Thanks,
phantomm@bellsouth.net

Yep, thats a good way to do it.

Ya know, I have a ST Disk Library Here with 2 or 3 thousand ST disks
that have ST Software backed up
in the MSA format. Some are in ARC or LZH format. But most are complete
disk Images.

I've went thru some of them and this type of MSA Image Backup does seem
to hold up fairly well.

Alot are games and are labeled. Some are utilities and Doc disks. And
some I have no idea until I
use MSA or similar on them as they aren't labeled.

There are plenty enough for a good 2 or 3 CDs full if I could find the
time to copy the MSA IMAGEs over
to CD. Another project on the waiting list.

I do wish any one with a PC who are usings ST images without sometype of
ST would at least try and
get a 1040STe. Although they can be abit hard to find it seems.

Regarding the ICD Link and Link II.

Sure wish someone could get the rights to remake at least the Link II.

Thats a small nice piece of hardware. And a must for using decent SCSI
drives on 1040STes and etc, unless ya can get something like a Link96
which
I really know nothing about.

Does B&C or Best still have a few of these in stock if anyone knows?

Yep

The same monitor was sold under the Phillips name as well.

Ok, Do you only have one type of RCA type video input on the back of
your monitor?

Reason I ask is that mine has one for sound and one for input video
which
will work with an Atari 8-bit.

However, I wasn't sure if the RCA video input was also a OUTPUT when the
VCR button is pressed?

Of course there are also a TTL RGB port and a Lin Port. For monitor
cables.

phantomm

Buy the way, if you are in the USA, is it for sale or trade?
Contact me if so....

The main difference between the LINK96/97 and the ICD Link is that the LINK96/97 has a SCSI ID (7) of its own. This is required for some hard disk drives and other devices, which are otherwise not recognized on the bus.
In order to be compliant to the SCSI standard it is required to have this ID, and some devices rely on it when they communicate with the host.

Earlier I wrote the I use only original falcon, I had not CT60, but I
have teh problem to run this game.

I get the CT63 2 days ago, and there is a big problem :
A short-circuit between the 3.3V and GND planes !
I don't know if it is inside the PCB or external... Maybe the cards must be thrown away or if it will be possible to modify them.
I think it is a PCB manufacturing problem... not a problem from soldering from assembler or design from me.

I cannot give now the new delay to ship the boards.

Piss off

I've had to figure out that people were in Germany or france by their ISP
too so the door swings both ways.

Mark

Right. Sorry. I was replying on very little sleep.

What OS are you using? I assume you've tried it with clean TOS (booted
with Control held down)? Do you have any hardware modifications (like
SCSI or SDMA patches, or bus speeders)?

Here's my solution, it has worked with any version of Window$ I tried it: Get a program called HDCOPY. It's a DOS program, and it can happily format and write (nearly) any .ST image you throw at it. I'm currently using it with my PC running WinXP with virtually NO problems. Formatting & writing disks with 82 tracks, 10 sectors and 2 sides is not a problem.

Hope this helps

Hello,

3 days ago I get the CT63 from factory and there was a small problem (a short circuit between 3.3V and GND layers because of a VIA that were missing on the new Top layer Gerber file I furnished to factory = some trace modifications for the 2 wires for the CTCM !).
Now it is solved and the first CT63 are running fine with CTCM ...
Shipping will begin next monday.
You will receive a personnal email !
Don't ask me WHEN it will go to you !
But if you are leaving home for hollidays (lucky you are !), tell me the date and I will ship after ... or before !

PS : I'm looking for 10 FLASH memory 8Mbits missing on 10 CT63... If you have a source, let me know
References accepted and supported by flasher software are :
- Fujitsu 29F800BA-70PFTN
- AMD 29F800BB-90EC
- others : contact me.

Regards

I've tried it with clean TOS too, no I have not any modifications my
Falcon, and I do not know why I can not to run.

best regards

> Use a RGB Monitor or TV.

No need. Runs fine here on CT60+accelerated bus. Some display probs in
main menu (arrow flickering) but the game itself is ok. Nice idea actualy.
If it runs with ct60+acc'ed bus, should run fine on plain as well....

Instead of putting this on E-Bay, I thought I would offer it here first.

Here are some basic rules, I reserve the right not to sell if the
highest offer isn't enough in my opinion. Some of these Items
I have spent alot of money on even though there were used
but like new when I got them.
So, If you bid and don't win. Don't get mad at me.

I just can't give these away with the investment I have in them.
All Disks are Original and like new. All include the manuals.

For the Atari Falcon 030

RainBow MultiMedia II Original Disk and Manual.

A great Falcon MultiMedia program. You can even
Sample Sounds and Music thru the Falcons Mic. Input.
It has a Sprite Studio, Photo Studio, Picture Studio,
SlideShow Studio and even a built in Game.

This is an amazing program and is very Fast,
even on a stock Falcon, due to the language its
programmed in. Uses all of the Falcons Colors.

You can even move the menus and displays around
to your liking. The animated Sprite Studio is one of
the best I have seen.

It will install to a Hard Disk. Works on RGB and VGA/SVGA.

This is a hard to find item and a must for anyone
 into Graphics and Audio Sampling on the Falcon030.
By Addiction Software.

RAINBOW version 1.0

Version 2s   little brother.

This version came out before version II.
Includes Original Disk and Manual.
Works on RGB and VGA/SVGA.

It has a Picture Studio, Photo Studio.
and etc. by Addiction Software.

If sold, I would like both of the above to go to the
same person. But they don't have to.

ATARI ST

The Advanced OCP Art Studio
by RainBird/FireBird

Original Box, Manual, and Disk.
In NEW Condition. only shrink wrap removed
to check that the program works.

This was made for the ST series. However,
I do think it will work on a STE as well.
It has a animated Sprite Designer and a World Map
Creator. There were some games made using this
software. But it isn't a complete game creator.
It has Drawing Tools.
Sprites can be output as data ready to put in other programs.
All designs can be prepared and ported via RS232 in correct format
for 16 or 8 bit target machines.

This is another program that ya don't see every day in this condition.

These are the only 3 items I have to sell for now.
As I go thru my extras I will post them here first.

If something interests you but you want to ask a question just e-mail me.
These a for sale in the USA, but I will consider overseas offers.

E-mail offers and questions to me at:
phantomm@bellsouth.net

Here are a few other Atari Items for sale to highest offer.
I reserve the right not to sell if the highest offer isn't
enough in my opinion. So if you bid and don't win
do not take it personally.

Atari Falcon 030

Original Factory 4meg Memory Board for Atari Falcon 030.
Like new Condition.

----

2 NEW Still in original Package RGB Video Adapters for
Atari Falcon 030. This allows you to connect your Falcon030
to a ST type Monitor.

Both are new in package.
One has the attached Noise Filter for use with a SC1224 monitor,
in its own package with label instructions.

The other does not have the filter, but in most cases it's not needed
anyway. Only if you get noise on your monitor.

I will sell both together or separate to the best offer.

WhiteLine CD Series
The Complete Atari MINT 1998

Original CD and CD Box with label.
The CD isn't labeled, but is original.

This was a Expensive CD

APEX MEDIA ORIGINAL MANUAL AND BOX
(Still in Original Shrink Wrap)

*****NO SOFTWARE!! MANUAL ONLY!!*****

This manual is a must for Apex Media owners.

This manual and original Box is in MINT Condition.
It has never been used at all.

Great for collectors, or someone who needs a manual.
Includes the last minute addendum.

This Black Book with the Apex LOGO is over 230pages. If you are using Apex without the Manual then your using it crippled. There are walk thru demos, and detail explanations for all options. Even the Hidden ones.

The complete software package with manual sold for well over $150.00. Here is your chance to get a Brand new Original Manual with the Original BOX!!!.
This is the only extra one I have.
I'll never part with my other one.

Again remember, there is no software with this offer!
Manual and Box only!

Original Atari Falcon030 Manuals
(All are like NEW)

Atari Falcon030 Owners Manual
AtariWorks Users Manual
(The extra Atari Manual for the following software)
Audio Fun Machine
Falcon-D2D Recorder
System Audio Manager (SAM)
Breakout
Landmine

These are the Manuals only! No Software Included!
3 Manuals in all.
Make offer on all 3 manuals

TRUEPAINT

Original Manual and Original 3 Disk Software
For the Atari ST, STE, TT, and Falcon030 Computers.

In Like New Condition!

One of the best Paint Programs ever made for the Ataris.
Supports all resolutions on the TT and Falcon030
Supports even TrueColour!
Created by HISOFT so you know its good!

Installs to Hard Drive or setup on Floppy Disks.
Setup program guides you through the process.

Supports a Ton of Graphic Image types such as
JPEG, GIF, TGA, GIF, Degas, Image, IFF and more.

Also, includes an animation format for making animations!

Great for anyone into Graphics!

OK :)
I will have a look and see what I come up with (one looks like it plugs
into the vme slot on a mega st) will look about for the other one

Has anyone tried to use a Happy Discovery Cartridge (The Big One) on a
Falcon?

If it will not work, is it due to the software not being compatible or
the cartridge port
itself being the problem.

Also, if it doesn't work, has anyone tried using Backwards and setting
the Falcon to
STE settings and see if that helps?

Reason I ask, is that I have a important disk that is 1.44 High Density
that I would
like to copy if possible. The disk has a important program thats
protected but
abit damaged. And I'd like a copy of it, so that I can try to work on
the copy and
maybe save the program.

Also, any disk or file editors that anyone could recommened that I try
to salvage it
is appreciated.

The file got damaged during a setup program. My High Density Drive at
the time
was not up to doing this setup program with copy protection. So after an
hour
I removed the disk. The support files are fine, but the main program
has been
damaged. The setup program is gone and I'm let with this damaged file.

Although I do have another working version of this file, I would still
like to
try and get the bad one fixed if for nothing more than experience.

Can anyone suggest, what I can do to fix the file?
I can copy it to another disk to work on it.

But I would like to get the Happy Discovery Cart working on the Falcon
if possible as it
would allow me a 2nd Disk Drive.

I have a Spectre GCR Cartridge, original Manual and Software. Plus
around 50
disks of Mac software to use with it.

The GCR cartridge has the Mac 128K Roms and works fine.

Is anyone interested in this package for a possible trade for
Atari STE-Falcon Hardware/Software or for purchase?

This is the last version of the GCR cart that was made.

If interested, contact me with your offer or list of items at:
phantomm@bellsouth.net

Why? There are decent emulators in Linux, apart from aranym. StonX,
Steem and Hatari are the ones off the top of my head right now.

> Only about 20 per cent of the programs
>that run with MagiCMac are working. Can I fix this by changing some

>Any advice welcome.

Try the emulators I listed above. They might run the programs you
want.

>
>regards Ludwig

P.S. I don't pass judgement easily on people, but you should have been
more patient. A simple post like "Can you please tell me how to run
XXXX and YYYY ... Can you help? " would be better. As anyone who is or
was involved in the creation of an emulator can tell you that it's a
very difficult job. What the aranym people do is very different from
what you want. You want perfect emulation. They don't do that. It's
very easy to flame other people's work. Try the other emulators. If
they don't cover you, you can do the best thing and turn on your Atari
:)

George (rubbing his hands, awaiting for the Falcon + CT60 to arrive ;)

Verily, it was written by Ronald J. Hall <dark_lord@charter.net>:
> As per Starlord, I was told that Rich Sanchez, the last owner, released a
> final version into the public domain.
>
> I'm no programmer, so what you're describing sounds like a big deal to me
> <smile>.

If you can get a hold of the source code, I'd be happy to look it over
and see what it would take to revamp it towards STinG. I can't promise
any results other than "yeah it can be done," or "sorry, that's just
way too much work". But I'd be glad to oblige a fellow ST sysop!! ;)

Of course, if it's entirely written in assembler, I can already say it's
too much work! If it's in C or maybe GFA Basic, that'd be different..

It's a bit of a drive to get up north to best, if they are still around, I'm down here in the desert. it's an ADSCSI PLUS ST and yes it has the clock battery. My boot system and all formatting was done with the ICD tools.
It was a shot in the dark.

Sadly, I don't know if the source code is available or what its written in.

I have a CT60 Falcon with Mintnet/Cab SSL OVL and still haven't been
able to use Paypal, so good luck.  I think Javascript re-directs
are used.  Keep at it Highwire team!

Hi all,

Looking for Hybrid Arts ADAP II software. I have the hardware, but no
software. You can send it to: remove nospam:

rorymcmahon@nospamgmail.com

Thanks
Rory

I haven't gone to the Amberley events, infact I only went to a few of the Corby events, I know they have them in Derby now which is only a few miles up the road from me, not been to any since Corby though..

>
> The group there would have made a killing selling Telsa coil kits :-)

Maybe, anyone could put together a kit, though its the time involved, plus cost of parts, it soon adds up to a fair old sum...... Even though most people dont like the saying, but if they dont have the skill to build one, then they shouldn't build one!

I think on the 99 corby event the UK record was set, I think they got up to 10feet or something like that, and that thing was LOUD! very good to see also ;-)

Everyone (well kinda) are getting into the solid state coils now, a lot harder but gives ppl summert to do I suppose ;-))

> There's a portable method for this in C99. #include <stdint.h> and then
> use uint16_t, int16_t, uint32_t and int32_t.

Thanks for the suggestion. But unfortunately many popular compilers are not C99 compliant and don't support <stdint.h>.

I guess I could include it conditionally, but I'm not aware of any predefined macro for testing the presence of stdint. Not sure is worth anyway. But feel free to change the typedefs and include it for your own use.

Btw, there are two mistakes in the code. One is just a typo in the comment, the other is an actual bug but is exposed only in some compilers:

```
<snip>
***** div68kCycleAccurate.c

// Change this depending on architecture
// This code assumes long is 32 bits and short is 16 bits

***** old\div68kCycleAccurate.c

// Change this depending on architecture
// This code assumes long is 32 bits and short is 32 bits

***** div68kCycleAccurate.c
        mcycles = 38;
        hdivisor = ((DWORD) divisor) << 16;

         for( i = 0; i < 15; i++)
***** old\div68kCycleAccurate.c
```

```
        mcycles = 38;
        hdivisor = divisor << 16;

         for( i = 0; i < 15; i++)
*****
<snip>
```

The missing cast is normally not relevant when the default int size is 32-bits, that's why I missed it in the PC. But it is usually significant when the default int size is 16-bits. And for performance reasons 16-bits is the default int size in many 68000 compilers. For the tests on real 68000 hardware I used assembler code, so I missed it again.

The corrected version follows:

Jorge

```
================================
div68kCycleAccurate.c
================================

/*
 * Compute exact number of CPU cycles taken
 * by DIVU and DIVS on a 68000 processor.

 */

/*

 The routines below take dividend and divisor as parameters.
 They return 0 if division by zero, or exact number of cycles otherwise.

 The number of cycles returned assumes a register operand.
 Effective address time must be added if memory operand.
 For 68000 only (not 68010, 68012, 68020, etc).
 Probably valid for 68008 after adding the extra prefetch cycle.

 Best and worst cases for register operand:
 (Note the difference with the documented range.)

 DIVU:

 Overflow (always): 10 cycles.
 Worst case: 136 cycles.
 Best case: 76 cycles.

 DIVS:

 Absolute overflow: 16-18 cycles.
 Signed overflow is not detected prematurely.

 Worst case: 156 cycles.
 Best case without signed overflow: 122 cycles.
 Best case with signed overflow: 120 cycles

 */

It's usually done in 'configure' script:

```
cat > tmpfile.c <<EOF
#include <stdint.h>
#include <stdlib.h>
#include <stdio.h>
int main(void) {return 0;}
EOF
gcc -c tmpfile.c >/dev/null 2>/dev/null
if test "$?" != "0" ; then
    has_stdint="no"
else
    has_stdint="yes"
fi
```

Yes, he actally told me to put it on my homepage thus some French users in a forum could download it. A forum there his friend Emrik (also here at NAS) is at. NAS is the release place for the project.

Rodolphe was here and explained the project for us with mine rgb-canon and laptop at NAS for a hour of time.

The word confidential comes from the time before the release.

The concept relay on Open Software and units that schematics are available for developers and so on. I would not say that this is a ATARI only project, but could be used as that. Its a base for every type of platforms with a "open mind"

Hi,

> Why Why why why? There's already the Pegasos?

Is this the PPC computer sold as Amiga with a board from bplan?

> Why not build something out of that?

I agree with you in using an existing board is a better way than develop one for such a small market. I had some nice ideas how to build a PPCTOS based on Linux drivers, Aranyms 68k emulator and EmuTOS to make a Atari clone. My idea dont need an underlying OS like aranym. But there is not much time left for such ideas and the last years also not enough money to by a Pegasos.

Regards
Michael

Finally, the HD drive works! Even under TOS2.05. I found an old Sony
drive in an old PC.
I did the modifications suggested by Hallvard.
The hardest part was to find the DS0 - DS1 selection circuit.
Anyway - now it works.
Thanks to Hallvard!

Peter, Denmark

Yes, SuSE provide an ARAnyM compiled for x86_64, on SuSE 9.2 (which I
use), but the blighter doesn't work...its beyond me.. <sigh>...

You're welcome :-)
That's great news!

I suppose you have the same problem as me, where the computer
doesn't automatically detect when to format HD instead of DD.

Strange actually, since the computer obviously can distinguish
between HD and DD floppy disks when reading/writing, so why not
know what kind of disk to format as well?

This depends on the hardware. I'm not sure about the details, but as far as I remember STs/STEs with HD floppy detect the media type (DD/HD) by trying to read, and by changing the FDC clock frequency in case of a read error. So this is a try and error approach that fails when the floppy disk is unformatted, because there will always be a read error. TT/Falcon have "proper" HD floppy disk hardware and do not suffer from this problem.

Do you know if it's possible to modify the hardware so that the computer already "knows" what kind of floppy is used by reading the status of the HD-detect switch?

I don't know if this is possible but I doub it, because this is such an
obviously useful modification that somebody would already have done it.

Is there any really good programm for transfer Atari ST floppies to PC?

Forget Image and STimage - work not with 20 Sector/track formats.

Wfdcopy is even worse - in XP can handle 10 Sector/track. Ignore errors is solved total falsche....

Best is probably Makedisk, but still not perfect....

Any suggestions ? Any source codes for improve - but only DOS programs (Win is crappy for such task) ?

bplan does not exist for many years. Genesi made it. Pegasos is not sold
as Amiga, but it is a clone.

It works on my Falcon with -audio off. The game is much slower then previous (0.30) versions. On 060 I felt lik playing on 030 and on 030 I didn't feel like playing at all ;)

Under FreeMiNT (botch Xaaes and Naes) I get black screen (in plannar mode), but OS seems to be operational becouse it closes cleanly after CTYL-ALT-DEL.

Check out the Warioware games for the gba. I got Warioware Twisted for
Father's day and its a very cool game. Nice simple games that a breeze
to pick up and play when you have 5-10 minutes to kill.

That's too bad :-(
I just booted my Mega STe to take a look at those parameters in
Ecopy 1.72 (it's from a German magazine several years back. I
think it was "ST computer" but don't quote me on this.
Unfortunately for me, all the menus are in German only, but I get
by though I'd prefer the English version).

Anyway, like I said previously, Ecopy has various settings for HD
and ED (extended density floppy drives: 2.88 Mbytes) modes.
Here's a screenshot: http://home.c2i.net/w-460389/ecopy.gif

It says nothing about machine specific settings except the "TT
kompatibel" setting. Do the other settings make any sense? Are
they indeed just for the TT or Falcon?

I think not just ST/STE but also the TT use the try-and-error approach.

Hmmm??? I guess some things have changed. Javascript may be the answer.
Hopefully Highwire will get it soon...

Are already formated floppies? If you have a ST with TOS 1.4 or above,
floppies formatted in the ST can be read on a PC. There are programs that will
format floppies in the older Atari's that put a PC sector on the disk.

>

Even if the price was right I would avoid this. Total Feed back 17, Only six sales, all of old DVD or VHS Tapes. No picture of item. For a "mint collectors item" I would expect many photos of the original item. I also don't think the description is correct. If it has a built in floppy drive then its an STF not a plain "ST". I wonder if its an STFM with modulator as it comes without monitor or modulator. Also says only 360K (i.e. single sided disk). This one looks much better item:-

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?
ViewItem&category=38597&item=8202057146&rd=1

However as you say plenty of optimists out there:-

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?

ViewItem&category=23784&item=7333582437&rd=1

seems a bit of a high starting price. I also like the optimism of

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?
ViewItem&category=38597&item=8201622806&rd=1

I would expect the Megafile to have died as its an MFM mechanism. Odd that
the cable has been lost....

Dave.

> too much work!  If it's in C or maybe GFA Basic, that'd be different..

Keep in mind too, that I possess the source to Octopus BBS so I can make
any desired changes and it already has the work completed to do Telnet
through STiNG :)

parcp might help, is also DOS, ST and UNIX based;
http://joy.sophics.cz/parcp/ it's practical and ultra reliable!!

wrote this below, was going to delete it thinking I was getting carried away with myself.. may help.
"
easiest way might be to use PARCP (parallel cable copy) to tranfer the files over. I'm assuming you're talking about getting standard unprotected files over rather than imaging entire disks to .ST or .MSA achives.

have a setup here which connects the PC and ST parallel ports full time. If files need to be transferred, just fire up the server end on the ST, and the client on the PC.

I still don't believe what anyone says about TOS disks being entirely DOS compatiable (not wanting to start a debate war here..), Windoze seems obsessed with wanting to format most of them, usually ok but sometimes screws up the FAT. Also stops you using custom ST formatting programs for 10 sectors etc. ...coverdisks and alike.

Best way again seems to be to use the ST for what it's intended ..reading ST formatted disks. PARCP bridges the gap perfectly, and even runs on Linux too.

Here's the link for parcp; http://joy.sophics.cz/parcp/ . The guy is still contactable via email and accepting shareware registrations. He also sells the custom cables which crossover at pins 1 and 11, with 12 thru 17 NC. Please don't register online, drop him a mail, as I've learnt that the hosting company takes 25% of anything he makes, and even takes VAT too!! Still believe in shareware here when it's well justified.

Hope this helps. I may be wrong and way off here but parallel transfer seems to make fiddling about with disks a long gone nightmare. Can easily download ST stuff from the various ftp sites to the PC, parcp over to the ST ramdisk, and play away. Also have the bulk of my ST disks backed up onto CD for immiediate recovery.

Have been getting into this a bit lately so all still fresh in my mind.

37&rd=1

Yep, mailed this guy a few days ago to ask if it included a cubase dongle with it, version etc. Hasn't replied.. Might be worth it if it was an original version of cubase, which I suspect it isn't.. Oooh, no mouse. Bit of a dispute there in the feedback 6 months ago over a mixer, feedback was left about a month later not after 2 days. Mmmmm. May be an ok seller, but dubious about him if things got tricky, ...like dongles and disputes. Would definitely have wanted an answer to that dongle question...

>
> seems a bit of a high starting price. I also like the optimism of

06&rd=1
>
> I would expect the Megafile to have died as its an MFM mechanism. Odd that
> the cable has been lost....

Mmmm, nods. Those cables aren't exactly easy to come by either. The external FDD looks good though. The ST looks utterly filthy though. Monitor looks good, but have 2 of them here (8533's) and they don't seem to yellow, mono sound-scart. Is Chelmsford, so about 30mins down the road here, actually might consider that one for the price of a family curry. Must stop collecting junk though...

Have bought these lately;

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=5210701815&rd=1 (good mutlisync monitor really, bit yellow, local pickup, seller was most interesting..)

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8198438142&rd=1 (was a local pickup. TOTALLY immaculate and complete right down to the clear sticky plastic still covering the Atari 520STFM badge next to the FDD light)

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=5205612710&rd=1
(another immaculate find, good contact that guy too)

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8195234732&rd=1
(biggest heap of junk I've bought so far, 2-3 weeks to deliver, yellow, thought about 'well you only live once' so just summed up, sod it!)

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8195233369&rd=1 (from the same seller so weighed up what I'd got, can at least backup protected disks)

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=8195233343&rd=1 (An SF314 with a single sided drive fitted in it.............(checked lots of old ST mags adverts that 314 is DSDD) same seller again, had had some good ZX Spectrum stuff off of them in the past :-(   )

Right, now must shut up, but they're some goods and bads really. One last question, how do I stop my links up there being broken up over different lines in Outlook? am guessing I'm missing something. Not wanting to drive you nice peeps insane..

night-night

zz@zz.net wrote:
> Is there any really good programm for transfer Atari ST floppies to PC?

Use a real ST, with MSAII, and link it to your PC thru the serial port, with Ghostlink (GHOSTLNK.ZIP IIRC).

You'll see your PC drives as ST drives, so the transfer can't be easier. You'll have time to drink a coffee, though, while the disk is being copied to the PC.

Simon

I use an ICD Adspeed accelerator. All I have is the "text" file on the floppy, but it does discuss installation. Send me your email address and I'll try to get a copy of the file from the ste to my windows machine to send to you. (No guarantees I can do it since my XP program fights 720k disks.

```

They don't seem to be selling any of their own Atari products but did have some Atari things for sale. So I guess you're virtually right.

Hello, Rory, I think I have the ADaP 1 software. This was to operate a
hardware sampler. If you want it I could send it to you. I also have
the ADAP 1 hardware but I am not sure it works. The software includes
some sample editing and is pretty sofisticated.
Mark

It depends on what you want to do with the disks.

By transfer, do you just want to copy ST disks to the PC hard drive
and have the programs listed on the harddrive as they were on the
ST Floppy?

Or do you want to use the ST disks in a PC drive for use with
a ST Emulator. And or just to copy files over between systems?

Or are you wanting to transfer ST disks to the PC hard drive into
sometype of Image file that has all the programs and etc of the
ST disk?

There are alot of different software and hardware made over the
years to transfer ST disks or files to the PC.

Which way is best, really depends on what you want to do with
the ST software. And or the ST Disks.
Also, the type of ST software, Original ST programs that may have
protection, ST disks that have just one Program or Game that may
not be listed in a directory normally; ST Disks with applications and

games or utilities and etc that aren't protected and can be listed
normally in a directory.

If you just want to make backup Disk Images, then the above isn't
that important except for disks that have copy protection.

Also some ST software of the Net and on normal ST Disks have
been placed on disks with Menus, especially games.
Most of these types of games have been cracked/hacked and have
non-standard was to load up the games. (The Menu Type).

In my experience, these can be hard to read by a PC drive. It has
something to do with the way the Menu looks to the PC as alot of them
mess with the boot sectors.

If you give us a little more info on what type of ST disk software and
what you want to do with it, then someone or maybe myself can suggest
a good method to handle them.

That's a way to do it. But the great thing about those Mag Pro RGB
monitors is that
you can connect a ST and 8-bit at the same time. Have both machines
running and
just press a button on front to switch between screen displays.

It saves alot of desk space. And it even has a VCR button on back. And a Green Screen button on front. And plenty of pots on front and back to control the color, contrast and etc. It's one of the best ever made in my opinion.

I never had a manual for it, so I was never quite sure what the VCR button did, unless it switched one of the ports to output to hook to a VCR.

Anyone know for sure?

It also works fine on a Atari Falcon in the RGB modes.

Mine went out on me. I can hear the whistle of a bad Cap or two and have narrowed it down around the powersupply. It's not shorted as the fuse isn't blown.

So it most likely a bad cap or two with the humming.
It just lost all power at once.

When I have time, I'll check and replace a few Caps. But would mind having another one or two of these if the price is right.

In the mean time, I am looking for a used one for sale that works.

>the status of the HD-detect switch?

Yes, it is possible, its a simple TTL signal. But it is not very useful,
and probably because of this it was never done.

It is very easy to detect the media type without any trial and error, even
when the disk is virgin unformatted. And it surprising (or not) that TOS
is not smart enough to detect this automatically.

TOS doesn't change the FDC clock. The FDC clock is automatically changed
by the hardware following the HD signal. That's precisely the reason why
it is easy to detect the media type, even without any reading or writing to
the disk.

And btw, because of this same reason, *every* TOS version (including 1.0)
supports HD disks. The only thing that you get with 2.05 and above is
built-in support for formatting HD disks. So you need a third party
formatter in previous TOS versions.

Mark,

Yes please send it. Until I can find a copy for the ADAP II, I can
hope that the ADAP I software will work...

Thanks!!!
Rory

That magnavox sounds exactly like a rebadged Philips CM8833 MkII that I
have on my shelf. The VCR switch is to select the composite video input
on the back.

Again, too bad :-(
But since it's simple, *can* it be done?
I would certainly like for the computer to automatically "know"
what kind of disk is inserted.

> TOS doesn't change the FDC clock. The FDC clock is automatically changed
> by the hardware following the HD signal. That's precisely the reason why
> it is easy to detect the media type, even without any reading or writing to

I'm not sure I understand.
Are you saying that the clock (8 or 16 Mhz) of the FDC chip
(WS-1772/AJAX) is changed, based on which position the HD-detect
switch in the floppy drive is at?
I remember messing around with the HD detect switch when I
modified the drive for my STe. I never got around to making the
HD-module though, but ended up using the same modified Sony drive
with my Mega STe, which works fine.
I don't remember the details, but I made a connection from the HD
detect switch to pin 2 of the disk drive connector (34 pin
Shugart connector). I think this had to do with the HD mode. Is
this something that can be used?

> And btw, because of this same reason, *every* TOS version (including 1.0)

In my opinion you need third party formatters in any case if you
want PC compatible disks that don't take forever to do, but
that's beyond the point ;-)

Oh well, if the floppy drive circuitry of the Mega STe can't be
modified to automatically know the disk type to be used I guess I
can set Ecopy to format HD floppies by default as that's what
I'll be using from now on anyway. No more need to hunt down
stores that sell DD floppies that cost twice as much as HD
floppies, but store half -if you can find them at all!

Aha,

So you are getting the advantages of 64bit.  Oh well ;-)  It was an idea.

Anyway, definitely no JIT for now, and you'll have to run a 32bit binary
of AraNYM compiled for non-JIT.  That's currently the only way I can get
it to work, but unfortunately I run Gentoo instead of Suse so I won't be
able to help too much.

Thanks,
Mark

Hm!  Question for you, then:  do you know if there is anyone doing any
work on BBS Express, or is the source released to the public?  If it's in
C, it shouldn't be too much of a problem to port over STinGadel's telnet
server code into BBS Express.  The only problem then would be to convert
all the single-user code that BBS Express uses to a multi-aware version.

> clients directly. It costs more than the EtherNEC (I have one of those

There would be pros and cons to both approaches; as you mentioned, not
using an EtherNEC frees up your cartridge port for other ventures.
```

However, using EtherNEC exploits the power of STinG and the availability and use of multiply-connected users. (no 'busy singals' as it were :))

> based configuration, etc, etc,.. I never tried the etherNEC, to be honest.
> It just looked like one of those "gizmos" that I would want to have

> the newer Falcon projects get completed. <grin>

It's really *really* nice. Opens up the internet to your ST in ways the original ST's designers would have *never* considered. The only pity is that the original designers didn't design the cartridge port as well as it could have been.. For example, the 8-bit xl's expansion port. Of course, the cart port was only originally intended to be read-only, but thanks to some very original and imaginative designers (a la EtherNEC, the cartrdige-to-IDE connectors, etc.), it has become far more than it was originally designed to be.

Okay, so it basically emulates a modem, complete with the Carrier Detect, RTS/CTS etc, and is otherwise a fancy interface for a null-modem serial cable. That's pretty cool.. I wondered how the C-64 telnet-able bbses were doing their thing.. heh

> If you want to see a picture of the UDS10, you can see one at my website

Not a problem at *all*!! In fact, I'm feeling pretty much the same way.. To actually get the ST to do what I had imagined it doing just tickles me pink! :D

>> image consisting on 80 tracks.
>
>Not when your using a drive on a ST, its the drive.

No, at least not for images with 80 tracks. Again, a bare drive has no relation to the number of sector or track layout. Saying that a specific drive doesnt support 10 (or 11) sectors per track doesnt make any sense. It would be the same as saying that a drive doesnt support files in Japanese. The drive doesnt know neither cares about the internal layout of a track. The only exception is drives with their own controller as USB drives.

A specific drive might have a limitation on the number of tracks though. Some drives cannot access more than 80 tracks. And most ST drives cannot access more than 82 tracks.

So if you cannot write an ST or MSA image with an ST, its either because it has more than 80 tracks, or the problem is somewhere else (could be the software). The only other possibility is if you are attempting to write an image that doesnt fit in any DD drive at all. For example, you can manually create an image with 15 sectors per tracks and use it under emulators; but obviously you cannot write it back to a physical DD disk.

And of course that you cannot write a double sided image with a single sided drive.

Hi Coda

Hm!, i had that dilemma with my machine, i wrote a bootsector to sort that, in fact i wrote a few, or rather customised it to set screen res and boot speed and cache and other stuff.

What's the chances of my finding it i wonder?

Hey as i recall isn't that one of the many features of NoRoach??

I seem to remember reading somewhere that the Atari cartridge port
was read-only (due to insufficient number of connection lines). Or
has the Paskud Interface overcome this limitation?

Regards, /Peter/

I fully agree, pros and cons for both. Bottom line, in a lot of ways to me
is that the EtherNEC is cheaper, plus (and a big one) is supported by an
actual Atarian. (Rory M.) :-)

Though, to be fair, what few times I contacted Lantronix for help, they
were nice, quick, and accurate.

Yep, that basically describes it.

I hear ya! When I shut my BBS down in '98/99 because 3 ISPs showed up in
our county (and correspondingly calls dropped off), I was really bummed
out. Now, I'm feeling pretty good about my BBS Express! ST running Mega ST
again.

See ya! :-)

Hi all,

I have the last 3 upgraded STFM's to clear, Open to resonable offers on these machines as I need to clear out some space as im very limited!
I am in the UK, I will ship overseas, though you can expect to pay �60 for cheapest shipping before anyone asks. I can take paypal (with surcharge) or cash or even cheque, you can collect or pay postage cost.

Anyone wants to contact my direct, just use my name and the website name, make sure you get my name in the body of the E-mail else it could end up anywhere or even lost.

http://www.cps-electronics.co.uk/web/clearance.asp

Chris

> No, at least not for images with 80 tracks. Again, a bare drive has no relation to the number of sector or track layout. Saying that a specific drive doesnt support 10 (or 11) sectors per track doesnt make any sense.

I dont know why, im not saying I do, but some drives will not format anything over normal tracks and sectors. Its a problem which I have seen on many PC's and Ataris, swapping the drive is the only cure. the only drive which I found which was fully upto the job was the MPF920 or in general any sony drive in MPF series. thats why people use them!! I'm sure there are other drives on the market by now which will do the job, though I tested a hell of a lot of drives and only the MPF920 did the FULL job. you may get the odd few tracks or maybe the odd extra sector or 2 out of a generic drive but I have only ever seen the sony drive do this fully. If you can offer a explination as to why a PC and atari will not format a extended floppy on particular drives,then im all ears into hearing a explination.

The PC's I had over the years would laugh at extended drives, drive capable or not, though I wasn't worried about that since I only wanted them for my ST.

> It would be the same as saying that a drive doesnt support files in Japanese. The drive doesnt know neither cares about the internal layout of a track. The only exception is drives with their own controller as USB drives.
>

If the chips they use don't support 10,11 sectors then the drive aint going to do it, probably cost cutting cheap chips on drives is all it is. most drives will probably go 10 sectors, not may ever got to 11 sectors. if I remember right 1.44s were 18 sectors, most drives will go 20 sectors, almost none will go 22 sectors... I guess its your definition of "extended" I always went for the most extended drives, only found the MPF series to beat all the rest, thats why I used um for years!

> A specific drive might have a limitation on the number of tracks though.

> Some drives cannot access more than 80 tracks. And most ST drives cannot
> access more than 82 tracks.

Some drives can't do more than 80tracks, its the drive, I am aware that most PC controllers wont do it anyway, though on a ST they will. I paid �60 out for a top of the range floppy drive a few years back, anything over normal 1.44 format and it just wouldn't do it, just crap drives. Some drives are pretty good, I think TEAC supported some nice extended formats, not as good as the sony drive tho.

>
> So if you cannot write an ST or MSA image with an ST, its either because
> it has more than 80 tracks, or the problem is somewhere else (could be the
> software). The only other possibility is if you are attempting to write an
> image that doesnt fit in any DD drive at all. For example, you can
> manually create an image with 15 sectors per tracks and use it under
> emulators; but obviously you cannot write it back to a physical DD disk.

thats something else, you only need to do a basic format to try a drive on a PC or ST. If you have the right drive on a ST then you can write any images. There is nothing worse than having a 800K image and have the drive grunt at you cos it can't do it... change the drive for a better one and all is fine..

>
> And of course that you cannot write a double sided image with a single
> sided drive.
>

ohhhhhh yesssss you can, lol....... ;-)

Actually a lot of my 1.44's are formatted to 22 sectors 83 tracks, I think that gave a nice 1.88 format....... I wonder if you are refering to 720K drives actually, most of them were good for extended formats, the epson drives were very good at even more extended formats, probably the sony 720's aswell.....

Hi there,

As I delve deeper into the Atari scene, it all seems to be changing over the last 3-6 months or so on eBay. Perhaps the feeling is that more people are jumping on the lets-sell-something bandwagon.

What's got my attention here is this lot for an Ultimate Ripper from Power Computing for �35!!
http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&category=96944&item=52148566
82&rd=1 The rom images are freely available on the net, with the 2 socket eprom boards available from 16/32 for �7.50. Admittedly an eprom burner is needed and some simple programming skills to segment up the image for the roms, but �35!! for something that was sold for �17.95 by 1993.

My latest eBay blunder has been an STE bought as 'excellent' which turned out to be cracked right through the case down the left hand side, and the most yellow ST I have out of 4.

I was wondering by asking here what the best sources you think are for Atari ST kit? I'm becoming very wary of eBay as years ago people were friendly, notifications of packages sent were common place. It's like going down to your local buy-rite store now.   Still some good kit on there but occasionally waaayyy overpriced and not particularly brilliant customer service. The main offenders seem to be the BIG sellers with thousands of sales, get-em in get-em out. The small sellers still remain excellent and often become good contacts.

Rant over, just interested to see how other people find it and get their kit?

Thanks,

Aly, Cambridge UK

Hi all!

There's a schematic PDF containing Rodolphe Czuba PowerPC project at my homepage.
Its aimed for the Nordic ATARI Computer Show in Gothenburg, Sweden tomorrow where Rodolphe him self will show off this project for the first time in public.

hes living in hopes there, tho he has for the starting price at �5, someone
will probably may pay that for it. Techie ppl can easily build one, but
most people arn't, if they want it bad enough they will pay for it.....
though saying that only some totally loony person would pay �35 for
one...... *looks out of window* hmmmm.....

> My latest eBay blunder has been an STE bought as 'excellent' which turned

indeed, you have to be carefull, even though its offtopic, but it amazes me
how insurance car right-offs with the front totally mashed in are listed as
"MINT CONDICTION" and going for the price of a new car.... I mean who is
going to buy a car with a crushed engine when they can buy a working one for
the same cash ?!?! me thinks im missing something somewhere.....

> I was wondering by asking here what the best sources you think are for
> Atari
> ST kit?

my website ;-)))) actually I dont sell any kits but the 1.44 controllers now... my upgrading atari days are at a close, hence me other post about clearning off STFM's too...... *sigh*

>I'm becoming very wary of eBay as years ago people were friendly,
> notifications of packages sent were common place. It's like going down to

oh yes, I brought a fone cable from one such guy, he was WAY in over his head, his sales were in the 10,000's and so were his negative feedbacks... the product was very poor and he even shiped pirate CD's with it and you couldn't even use the cable cos the software was so much out of date...

I've had trouble with new commers to Ebay, mostly ppl trying to con u, they are clueless and nothing ever gets sortout out. One time I listed a item twice by mistake, honest mistake, one guy bid on it and I cancled the auction, he played hell about it going on on how he promissed it to his friend who has paid him for it so he must have it, and if I dont sell it him he would take me to court and demand compensation... it went on for months, he dragged Ebay, paypal anyone he could get in touch with let alone the piles of abusive e-mails I got every hour... also threatend to come over to our house and take the item by force, I mean seesh, where do these people get off, he never even paid for it cos I ended the auction...... its not the first time ive had to deal with people like these either....
Then theres the people who try to fake the paypay payments to you, which drags out over and over.. they all seem very nice etc but fail to understand that im not *that* thick and going to accept a fake payment, then they send it again... and again... and again..... fake fake fake!!! more months of wasted time..... then eventually they get abusive cos you have not sent them the goods and then drag you though ebay and paypal, then back to abuse E-mails.....you have to ask is it really worth the bother in selling stuff.....

I have a few general items on Ebay now, though I dont like to chuck stuff out, its probably going to be a whole lot easier than trying to sell it.... I've even sent stuff to people FOR FREE and they compalin cos the item is faulty (when you said it was) and they want to take you to court cos you have sold them something which is faulty........ they failing to realise they haven't even paid for it..... then its back to abuse..... its never ending..... so really no matter what I have or its value its going in the bin in future.

> Rant over, just interested to see how other people find it and get their
> kit?
>

Very wary of anything form Ebay!! Most ppl (like me) just shout out hear,
if you can get past the trolls then you are off to a good start. if you want
anything just shout out on the forums, do homework first and see how regular
they are, or if anyone known actually knows them..... there are a lot of
known regulars in here among other places so its the safest place to start I
think!

Why Why why why? There's already the Pegasos? Why not build something out of that? It's already completely open, based on this design it looks like the only lacking part is the PCI-X on the Pegasos. It seems like a redundant work effort, but if this brings me closer to a powerpc based Atari clone, so be it :) I want one.

This doesn't seem so implausible. I see these at garage sales and flea markets all the time!

I've done about 20 sales and 60 purchases in total on eBay. Never had a problem from years ago till now. Bought from all types of sellers big and small, all types of equipment from high ticket common retail items like an Apple Powerbook G4 to the rarest of stuff including a Falcon.

It all comes down to making a reasonable assessment of whether or not the pictures of the items are stock pictures, making a reasonable assessment of the seller's desire to satisfy customer complaints, and in general being very careful. If you sell something and someone from Indonesia with poor English skills sends you an email and asks if he can buy it... You can almost taste the fraud.

Perhaps I've just gotten lucky, but I discriminate very harshly and do my homework and eBay has never mistreated me. That's the lesson to be learned really, be skeptical of everything and bid and sell very carefully.

The one thing I got semi-screwed on was I bought some BMW software on eBay that the dealerships use. Basically diagnostic/troubleshooting manuals and parts lists. It was only $15 and lo and behold when it arrived it was burned to CD-R. But it was such a professionally done job I decided to let it go ;-) - Besides I had the software that I need that BMW does NOT sell to consumers ;-) And after the price I paid for their car, I figure I should be entitled to it ;-)

eBay has had by far the bottom end prices on all things that I've bought. Compared to other places it can't be beat, that is if you're sure you want something and don't want to return it ;-)

Thanks,
Mark

> though saying that only some totally loony person would pay �35 for
> one...... *looks out of window* hmmmm.....

quite likely, plenty of 'em, wanting �60 for 17" monitors in the Free-Ads
when they're selling 'em for �49.95 at PC World. Oooh, there goes another
boat load of innocent souls.

>
> indeed, you have to be carefull, even though its offtopic, but it amazes
me

the
> first time ive had to deal with people like these either....

Mind boggles. Talk about self inflicted stress. I just let the STE thing
drop, what's the point in doing that to yourself? Life's too short.

> Then theres the people who try to fake the paypay payments to you, which
> drags out over and over.. they all seem very nice etc but fail to
understand

You can't complain about stuff that's FREE, sheeesh!! Off to someone in
Cambridge this weekend to pickup some of their Acorn stuff, specifically the
mice I'm after as they're bus driven and wayyy better than ST ones (yessss,
people, Acorn mice work on ST's ;-)) He's going to get a bottle of wine to
say 'thanks'. You can't fcuk up the good will of people within society,
it's wrong, it disheartens me to think that people just don't get it. Then
they wonder why everyone else is so fed up in the street.

Oooh thunder storms, they're well cool!! Hopefully very very soon. Thanks
to global warming anyhow. Must get me kite out, that's one of the things on
the to-do list in my life. :-))))))))) (thinking servo remote controlled
reel). Wanna come?? :-)

True, I can get a great system for around $80-$100
with quite a few carts, but around here, (SE,PA),
there aren't many old Atari systems to be found.

>>
>
> Oh do keep some back :-) An STFM, a Mega, an STE, just for the collection
> in 50 years time.

Oh I intend too, I have my Falcon with its CT60..... still n bits I might had... 2 years running I think now.... (in bits that is) A veloce STE from TUS (STE with 68020 CPU and running a bit faster with TOS 206, 1.44 drive (natually)) When I get around to it I will upgrade a STFM for my own use, will make a nice addition to my collection..... I have a ST... needs a very good clean and a PSU! also have a jaguar (no CD tho) with a massive collection of 2 games, plus a 2600 consol with a few games too... I was going to blo a 4MB eprom and add loads of switches to make it selectable, since the games were only like 32K (I think) you could fit a fair few ona 4MB chip..... never got around to that either :-\   no TT...... I do have a Milan 040 in the loft, never got around to seeing if it actually worked... I got it as faulty , though looked like broken simm socket, to which I replaced... but never tested it....... its on my "to do" list tho...

> Ya nods, saying that tho about the 10,000's sellers, some of these ones in

> Hong Kong are quite good, have had a few gems from over there.

Yeah me too, I seem to get my batteries from over there.....

> drop, what's the point in doing that to yourself? Life's too short.

life is very much too short, I'm pretty stressed these days, I try to keep
out of things as much as possible now, 9 times out of 10 I try to help
someone and all you get back is piles of abuse, this is not limited to the
atari groups either... you should see some of the arguments which have
happend over the years! its never ending :-(

> You can't complain about stuff that's FREE, sheeesh!! Off to someone in

lol, cool stuff, theres a guy in london who I write too, hes like 70 I
think, really nice guy, you should see the stuff he has collected!!! his
whole house is piled full of old computers, you name it hes probably got it,
hes not online though, been trying to get him to get on the net for years...
hes old and set in his ways ;-) one wonders if a dragon 32 can get on the
internet., hmmm.....

> people, Acorn mice work on ST's ;-)) He's going to get a bottle of wine

yup, my goodwill just keeps going down and down, but I try not to sink too low, its hard when you get constant attack of abuse from ppl for years and years...there are still good ppl out there, just few and far between these days it seems... most ppl are either ungreatfull or just plain unresonable...

>
>>
>> Very wary of anything form Ebay!! Most ppl (like me) just shout out

hehe, yeah always best to try to behave in public.... just beware of the anti troll squad, they get a bit OTT at times ;-) still.... funny tho, lol...
I got classed as a troll in some newgroups not to long ago.... that wasn't so funny :-(

ahhhhhhh, well this is what you want!

http://www.tcbouk.org.uk/corby2000/index.htm

even though you can't see me, im in the group foto, far right at the back....

http://www.electricstuff.co.uk/uktesla99.html

same on this one, I like to hide, lol, though I did get my name mentioned that time :-)

(thinking servo remote controlled
> reel). Wanna come?? :-)

yeah sure, better go out and do something before the offtopic patrol walk past, lol

Actually, it's well known that Xmas was hijacked from the pagans to aid
in the transistion to christianity. For all we know, Jesus' real
birthday could be in July!

Speaking of those, does anyone have a public domain
copy of such a file?

Most historians place it in August, although some say it might have
been in March.

Hmmmm.... If you are in CA then you are fairly close
to Best Electronics and B&C, also ATY Computers if Alex still works on
Atari stuff, he would be your best bet at getting it fixed locally.

Heck, I don't know if Best and B&C are still in business or not.
If so, one of them should have either a replacment or something
to get ya going.

Which board is it, I believe they made a few different versions.

Should be stamped on the top side of the board, some are labeled around
the edge of the board

Does it have a on board battery clock?

Phantomm

I heard that the Pegasos boards wont be around much longer, and its
incredibly difficult to get hold of one now. Dont know how much of that
is true.

I want a hawk.

Coda.

Strictlyt it is. However there are tricks you can use to write to it. You
have to loose some of the address space, but its possible. Otherwise things
like the Ethernec could not work..

Were you at Amberley last year? I attended as a first-timer and was
astounded by the sparks to be seen :-)

The group there would have made a killing selling Telsa coil kits :-)

For the 8-bit just get a Commodore monitor cable and a Video converter. Than
get ANY SVGA monitor and it will work. For the ST fet the ST-VGA monitor
adapter and use any SVGA monitor in mono.

YOu need to install Mint/Mintnet adn then get Cab with the Mintnet Cab.ovl
file. I am told the Mintnet ovl file has secure sockets and works great. I
cannot test it right at the moment, since my Mintnet partition was loaded with
error for some reason and I have to re-install it.

Okay, nobody seems to know where to look for docs/installation text etc,
for this accelerator, so is anyone using this accelerator and have the
docs? I'd be fully willing to reimburse someone for copying and mailing
them to me. Thanks!

Hi,

The software "Eureka" is updated and released on its WEB page.
It is a "2D Graph Describer and 3D Modeller". You will have to
fetch it at :

http://eureka.atari.org/eurka507.zip
That is the Complete Common Edition

http://eureka.atari.org/eurka020.zip
Is the Complete 68020 Edition

http://eureka.atari.org/eurkafpu.zip
Is the Limited FPU Edition

http://eureka.atari.org/eurklite.zip
Is the Lite Edition, working on early ST with 720kb floppy

http://eureka.atari.org/lib_dgem.zip
Are Dynamic Libraries Extensions for Eureka

http://eureka.atari.org/tiny045.zip
Is the OpenGL Extension (requires previous package)

The main novelty of this release is the add of 43 3D
FMU shapes coming from the K3DSurf software from
Abderrahman Taha.

I wish you big fun with all this new STuff !

Best regards,

-- Fran=E7ois LE COAT

Most of the drives I tested years ago wouldn't do anything over the generic
format, which is pretty sad really in this day and age.

> If there is a real solution to this I would also like to know what it

buy a better drive ;-)

Chris

This is technically not possible (unless you are talking about USB floppies or such). The *drive* has no idea about the track layout of the disk. Any drive supports extended formats with more or bigger sectors than nomal for this reason. As a matter of fact, some "extended formats" are windows standard, Microsoft used those formats for software distributed on floppies.

A specific drive might have a limitation on the number of tracks, but *not* in the number of bytes and sectors per track. The limit per track is exactly the same for all drives and it depends only on the density.

The problem is most of the time the OS. That's why you need to use Win 95,98, Linux or plain pure DOS. In some cases it might be a limitation of the controller as well. But the drive should never be a problem for an image consisting on 80 tracks.

Keep in mind that Paskud interface is not compatibile with AHDI/XHDI
(so, no Magic or MiNT or any AHDI/XHDI tool).

But yes, it should work with Comact Flash cards.

Verily, it was written by Coda <smeg_007@hotmail.com>:
> Wasnt me! :-)
>
> The reason why I would need it to listen on a different port is that I
> already run telnet on port 23, but actually I cant think of a reason
> why I cant move the telnet service instead.

grin I know it wasn't you -- it actually was someone on a MOO that
I talk to all the time. Fortunately, he was able to tell me just what
he did..

And, through the research of that, I completely revamped the telnet
preprocessing negotation/handshake routine. It is now far *FAR* more
durable and bullet-evasive than before. (it's in beta, after all, so
I can't say 'bullet-proof' *JUST* yet.. heh)

Anyway, it's back up now.

Again, thanks for the suggestion, Coda - it's on my short (but ever
growing) list of additional features. :)

> unit out see if you can verify this?

Its most likely just an issue with a local ground loop and removing the
screw eliminates this and the attendant noise /instability.

If wanting to 'dump' as .ST disk image onto a disk which can be used/bootable on an Atari ST, do the following;

1. Use DOS or a WIN95/98 DOS box as your O/S, you have to boot from a HDD!!
2. Add the crucial command to your config.sys file for this to work;
    `DRIVPARM=/D:0  /C  /H:2  /I  /S:11  /T:85`
3. Get hold of the DOS application ST2DISK, here;
    http://www.8hz.com/stdisk/

That's it!! Do note that once that DRIVPARM entry is made that you won't be able to use your disk drive with normal 720K or 1.44Mb disks so it's best to 'REM' it out except when you're using it. That means that you have to boot from a hard disk, as the PC will balk the moment the disk parameters are changed if trying to boot from floppy.

If wanting to run on anything higher than WIN98, forget it!! Also, this procedure is shaky on even WIN98 with some of those older 'integrated' baby AT motherboards. This is confirmed as working on an IBM ThinkPad 755C laptop, and also a Toshiba Tecra 8000 laptop. My oldish 98 desktop PC didn't like it one bit with the drive going crazy after a few images and needing a reboot. These laptop drives will also go to 11 sectors and 84 tracks. Actually, most older FDD drives will do 84ish tracks but the newer PC ones today aren't really Shugart industry standard drives so I've avoided them but they may work..

Also.. The creme de la creme of disk controllers are the Promise IDE/FDD Cache controller range as these support ALL of the weird and wonderful disk standards right down to SSSD.

Hope this helps. You can take any .ST image, namely the Automation cracks, and they work on an ST.

I had a look on amazon.co.uk yesterday, and they dont have them (or at
least I couldnt find them). They do have the V1 flashback at 24.99 but
who would want one of those?

Coda.

See Steve's reply, I was thinking this might have controlled a current, NOT voltage! limit. But then again a jumper would have been a better choice.

Love to see somebody do this (multi-line)with the software I use for my
BBS (BBS Express! ST). I'm afraid it would be a major job though. :-(

I have a ICD host card that worked up until the major roof leaking and flooding my machines. I was using it on my TT, which itself is ok, but the card died. Does anyone know if anyplace can repair the card? I tried ICD and got no answer back from them at all.

There is no way to use the TT's SCSI port instead? This is faster and
more powerful than ACSI with the ICD adapter anyway.

Heh, it was indeed.  the original STadel/Inner Sanctum code was purely
single-user.  I had to rip out the original guts, due to the fact
that it was single-user was *so* infused into the system as a whole.

I can imagine it would be a similar experience for BBS/Express.  I
remember logging into a lot of Express boards, though. It'd be nice to
see one of them back in action. :)

I was afraid of that. Wish I was a better programmer/had more time. I'd
love to do it.

I logged into your BBS this morning - looks like you've got a good running
start on it. As a fellow Sysop, I know how much work is involved in
running and maintaining a BBS. :-)

As far as seeing a BBS Express! ST board back in action, just telnet to mine: 24.177.23.74

Like you, I'm beta-testing from where it had been down so long but the majority of things are okay now.

See ya! :-)

I will try this solution too.
After the weekend i can say if it works. #Time is very limited under the week ;)#
I never have a problem writing "cracked" game disks back to a real ST. I tried the Diks you mentioned, and others too.
The only #damn##grrr#mistdinger#ill#things-Images which will not work the way i want are many of the newer and bigger Demos ;)
So i have to work out a few solutions...
Thanks so much for help
Tolkin

```
news:da0gen$fi4$1@nwrdmz01.dmz.ncs.ea.ibs-infra.bt.com...
| If wanting to 'dump' as .ST disk image onto a disk which can be
| used/bootable on an Atari ST, do the following;
|
| 1. Use DOS or a WIN95/98 DOS box as your O/S, you have to boot from a
HDD!!
| 2. Add the crucial command to your config.sys file for this to work;
|    DRIVPARM=/D:0  /C  /H:2  /I  /S:11  /T:85
| 3. Get hold of the DOS application ST2DISK, here;
|    http://www.8hz.com/stdisk/
|
| That's it!!  Do note that once that DRIVPARM entry is made that you won't
be
| able to use your disk drive with normal 720K or 1.44Mb disks so it's best
to
| 'REM' it out except when you're using it.  That means that you have to
boot
| from a hard disk, as the PC will balk the moment the disk parameters are
| changed if trying to boot from floppy.
|
| If wanting to run on anything higher than WIN98, forget it!!  Also, this
| procedure is shaky on even WIN98 with some of those older 'integrated'
baby
| AT motherboards.  This is confirmed as working on an IBM ThinkPad 755C
| laptop, and also a Toshiba Tecra 8000 laptop.  My oldish 98 desktop PC
| didn't like it one bit with the drive going crazy after a few images and
| needing a reboot.  These laptop drives will also go to 11 sectors and 84
| tracks.  Actually, most older FDD drives will do 84ish tracks but the
newer
| PC ones today aren't really Shugart industry standard drives so I've
avoided
| them but they may work..
|
| Also..  The creme de la creme of disk controllers are the Promise IDE/FDD
| Cache controller range as these support ALL of the weird and wonderful
disk
| standards right down to SSSD.
|
| Hope this helps.  You can take any .ST image, namely the Automation
cracks,
| and they work on an ST.
|
|

Don't know.. It must work for someone ;) just not me ;) Maybe we have
socket 754 versus 939 or 940 and there's differences.

Anyway, a lot of things run faster on amd64 in 32bit mode. Maybe you
should consider running 32 bit linux?

Thanks,
Mark

Below is attached source code for computing the exact number of cycles taken by a specific division on the Motorola 68000 CPU. As far as I know this information was not (publicly) available before.

Current emulators for 68000-based machines (Amiga, Atari ST, MAC, MAME, etc) reached an amazing level of accuracy. The exact timing of the division instructions remained as one of the main inaccuracies because this is not documented in the available manuals. Hopefully, with this issue solved now, 68000 emulation can take one-step forward.

The code and algorithm was only partially tested. It is not feasible to do an exhaustive test on real hardware in a single machine.

Please note the cross-post in several newsgroups before replying.
Thanks to Toni Wilen (WinUAE), Russ Hayward (Steem) and Leonard (Saint).

The source code below is also available at:

http://pasti.fxatari.com/docs/div68kCycleAccurate.c

Jorge Cwik

 */

/*

 The routines below take dividend and divisor as parameters.
 They return 0 if division by zero, or exact number of cycles otherwise.

 The number of cycles returned assumes a register operand.
 Effective address time must be added if memory operand.

 For 68000 only (not 68010, 68012, 68020, etc).
 Probably valid for 68008 after adding the extra prefetch cycle.

 Best and worst cases for register operand:
 (Note the difference with the documented range.)

 DIVU:

 Overflow (always): 10 cycles.
 Worst case: 136 cycles.
 Best case: 76 cycles.

 DIVS:

 Absolute overflow: 16-18 cycles.
 Signed overflow is not detected prematurely.

 Worst case: 156 cycles.
 Best case without signed overflow: 122 cycles.
 Best case with signed overflow: 120 cycles

 */

I've used both ports, the host card had an old BIG ( size not storage) ibm
drive on it and it worked fine with the host. Plus as my bootup was set up
with ICH ult's I don't have the catching now nor the extra folders beyond
the 64 limit without the host. I wanted to fire up that drive and see if I
could recover the files I put on it and transfer them to the 2ga one inside
the machine.

I was surprised to see that the Mega STe doesn't automatically
detect if a HD or a DD floppy is inserted into the drive, or is it?

When formatting a HD floppy using the TOS desktop formatter,
"double density" came up as default as it always has.

Using Ecopy I found some settings regarding this issue. Can't
remember the exact details as I'm not in front of the Mega STe
right now, but there was an "automatic" setting as well as
several "high bit" and "low bit" settings.

Anyone know more about this?

There's a portable method for this in C99. #include <stdint.h> and then use uint16_t, int16_t, uint32_t and int32_t.

Hy, i have found this side yesterday, and tried a few progs there, but none of them worked with the demos i wanted to view :(
But i stay tuned on this, so if i find dth. i will tell.
Bye
Tolkin

Are you using an EtherNEC, then? If I may ask, how is Express seeing the connection?

Sadly it didn't work either...drat! :-(

> Don't know.. It must work for someone ;) just not me ;) Maybe we have socket 754 versus 939 or 940 and there's differences.

Mines a 754...

> Anyway, a lot of things run faster on amd64 in 32bit mode. Maybe you should consider running 32 bit linux?

32-bit software runs fine, but 64-bit works notably faster for the stuff I do. I have a nice POV-ray render, which takes a 6000x6000 pixel JPEG, textures that onto a 3000x3000 pixel height field map, and uses area-lights, depth-of-field, media, to render to 720x576 with +A0.0, in under a minute. Meanwhile the same scene rendered on a 32-bit version takes almost 3 minutes. When I'm animating as many as 500 frames with this scene I'd rather use 64-bit so it will not take all day to render. After the render is finished I'm left with 500 frames at 900kB each. ffmpeg can take those frames and compile them into a high-quality mpeg2 VOB video file in under 30 seconds. Again the 32-bit version of ffmpeg takes longer, at around a minute...

64-bit or bust sorry... :-)

You're having such a hard time because your prices are too high. Lower
them until sales pick up. Match the economic times. Collectors don't
have the expendable income like they did a few years ago. Compare prices
on ebay now to what they were before the tech bust. They're like 1/3
what they used to be.

It is interesting that classic controllers can be used with the Flashback 2. If the reverse is true, it might well be worth getting a Flashback just for some spare joysticks (and the occasional gaming session, of course).

I fully understand. I did it from roughly somewhere around '89/90 to about '98/99 or so.

> Are you using an EtherNEC, then? If I may ask, how is Express seeing

> the connection?

Absolutely you can ask! I'm using the Lantronix UDS10, a serial port to LAN converter that works great with Atari computers. I heard about it first from the Atari 8-bitters, who were using it both for BBSs and as clients directly. It costs more than the EtherNEC (I have one of those too, btw, bought from Rory), so I don't really know which is the better way to go. It doesn't tie up a cartridge port, it does have a nice web based configuration, etc, etc,.. I never tried the etherNEC, to be honest. It just looked like one of those "gizmos" that I would want to have someday. I may wind up using it for my Falcon though, until some of the newer Falcon projects get completed. <grin>

As far as Express seeing the connection, the UDS10 sends a signal from the LAN to the STs serial port just like a modem would. In fact, thats one of the options in the config that you have to have set for it to work "modem emulation". It took me a couple of tries to get it right, with lots of help from here and comp.sys.atari.8bit, and Marius Diepenhorst (sp?) but I got it in the end. I had to take the *.mdm files from Express and edit them, basically taking out all the modem AT* and string commands leaving it pretty well blank...and that was it, we were up and running.

If you want to see a picture of the UDS10, you can see one at my website (see sig below).There are also screen shots (not good quality though, gonna replace those when I can) of the hardware the BBS is running on, as well as captures from an actual session.

Well, guess I got a little long-winded in my reply there, sorry. I get all excited talking about Atari, ya know? :-)

See ya!

I have a suggestion:

If you can find someone near to you that has a similar card, Maybe
they would let you borrow it long enough to transfer your files over.

As far as fixing the board, Just about anything can be fixed but
it depends on the amount of damage. ICs for these boards can
be hard to find if ICD made there own special versions.

A ICD (THE LINK) or (THE LINK II) would be good replacements.
If you can find them. I use a LINK II with my 1040STE and have
never had a problem with any SCSI hard drive that I've used with it.
Those Links are in good small plastic cases.
Originally they came with ICDs hard drive utilities. And its not bad
software to use on 1040STe/MegaSTe/etc. Not knocking HD Driver,
Its good also. Use it on one of my Falcons.

BTW, if you decide not to keep that damaged board. In stead of
throwing it out. Give/sell or trade it to me. I tinker on all kinds of
Atari hardware when I have the time. Don't know if I could fix it
without looking at it. But might could use a chip or something off
of it, if they are not all fried.

My other critical advice for him would be not to use Xmas in July as an
advertisement. It might offend some religous people (I'm a  little
dissapointed but not offended) because the primary meaning of Xmas is a
religious celebration, not a means to market merchandise (remember, "Have
you made my Father's house a den of merchandise?")

I realize that many companies do market at Xmas time, however I think "Xmas
in July" sale is taking it too far.

Just some helpful criticism, not a flame.

No, Xmas is Gifts, Party's, Egg-nog, and decorations.

Christmas is the religious celebration.

There's not another Atari user in the whole Rosamond, Calif. area.

It took me amost a year to get this card when I first moved here. Don't know which chip fried, but a single drop of water did it.

I was lucky my TT didn't fry, as it is the 1040ST keyboard is trashed and has to be replaced too.

I am looking for a program called booter, written by Holger Janz. Anyone have to hand? It is a MegaSTE configuration type program, and can execute a floppy boot sector. Ideal for running games at 16mhz, hopefully it can set the floppy seek rate too. I need to play Millennium 2.2 again;-).

Mark

Hi Mark

Floppy boot sectors don't need extra software in order to be able to execute
if they are executable software, they do it all on their own.

>I am looking for a program called booter, written by Holger Janz. Anyone

Steve, the point he is making is that at reset the MSTe defaults to
8mhz, which then is what youre stuck at. With Booter you can set 16mhz,
then boot the game.

Coda.

Hello,

I made a new bugfixed version:

Emulate Pause key with Alt+P.
Status bar zoomed in big resolutions.
Work with old Shareware versions.
Caches sounds instead of loading them all at start.
Audio can be switched off.
And many more!

The more important fix is being able to switch audio off, which should prevent most crashed at start.

Hy, do you mean to copy the image of a disk to a normal Atari ST Formatted

```
disk, and then write the image "unpacked" onto another disk using the Atari
ST?
So on which kind of PD-Disk is it? Or where it can be?
I will look for it ;)
Thanks for help..
Tolkin

|
| Hi Tolkin!
|
| Assuming you are doing this on the Atari, try FastCopy III or Pro.
| It was shareware but I have seen it on various PD disks. I must
| admit I have not tried its 'Image copy' function but it ought to
| work.
|
| Regards, /Peter/

J�rgen Strobel wrote:

> Are there other tools to write not standart ST-Disk images back to Floppy?

The way I do it:
- buy a Null-Modem serial cable
- plug the ST to the PC thru the serial ports
- download Ghostlink and run it on both machines at 19200bps
- donwload "MSA2ST" for Atari, or other tools for .ST images
- now you should be able to access your PC drives as if they were ST
drives, and thus can use easily the real ST to write back any kind of
MSA/ST file stored on the PC.

Problems:
- it's rather slow
- not sure about this if you run XP on the PC

Cheers
Simon

Under MiNT, you can add the line 'setenv SDL_VIDEODRIVER gem' in mint.cnf,
or run a shell in tos2win to modify the environment variables. Maybe

something like this is possible under Magic. Unfortunately, this is not
easy to do under TOS; using a front-end application (todo) could be a
solution.

For the crashes people experiment, it seems to be a bug in IKBD SDL
driver, so try GEM video driver if you can. I am investigating this. And I
also made many fixes in the game engine, v0.41 is ready (along with
Heretic), waiting for the IKBD problem to be solved.

Hi there,

I have compiled it, installed it from RPM, tried x86_64 and i386/i586, but no matter what I do ARAnyM starts, finds all the stuff it requires, and then segfaults...

I'm running SuSE 9.2 Pro on an Athlon64 3000+, using a fairly clean SuSE setup.

I've tried mailing to the aranym list, but no-one answered my question.
I see a few aranym threads in here so this is my last chance...

Does anyone have an idea what I can do to stop these segfaults? All I

want to do is run a virtual Atari on my Linux setup, because I miss my
Falcon030! (sold it to a guy in Australia!) :-)

I added the SDL_VIDEODRIVER=3Dgem variable to Magic, and now when I run Doom, after all the initialization stuff, it briefly opens a small GEM window, but then the whole screen goes black and nothing else is ever displayed.

Anyone else had success with running Doom in a GEM window with Magic? I know it's many times faster in Magic than in TOS, so the added stability and functionality would be a welcomed sight!

If anybody here is near Chicago on July 16th, you can test the retail version of it (first time anywhere) at the 8-Bit Classics booth at VGS. Here is the press release:

Atari Video Club/Jaguar Community United is proud to announce that with help from Corey Koltz of 8-bit Classics (http://www.8bitclassics.com) and Curt Vendel of the Atari Museum http://www.atarimuseum.com/) that The Atari Flashback 2.0 game console will take it's first midwestern appearance at The 2005 Video Game Summit in July before it's inital release in August. This will be it's first public showing in full retail form. The Atari Flashback 2.0 made it's first southwestern appearence at the Okalohma Video Game Expo on June 18t(before that it was shown at the Electrontic Entertainment Expo back in May). The Atari Flashback 2.0 features 40 built in 2600 games all using actual 2600 technology (some games are classics but there are a few new homebrew games included). Plus the controllers are interchangable with classic Atari controllers. Stop by the 8-bit classics table at VGS'05 to check out The Atari Flashback 2.0 and flashback to the 70's when you got your first 2600.

The 2005 Video Game Summit will be on July 16th,2005 from 9am to 6pm Fairfield inn and Suites (Heron point building), 645 West North Ave, Lombard, IL 60148.

Join the Video Game Summit mailing list for updates on the event (VideoGameSummit-Subscribe@yahoogroups.com) Visit the VGS website: http://avc.atari-users.net/Events/FestVGS.html

For more information about Video Game Summit contact Daniel Iacovelli at AtariVideoClub@yahoo.com.

Have you tried downloading the pre-setup ISO and burning it? Worked for me. Even used it on my laptop. :-)

Cab is currently your only choice. I'd suggest buying a PC. $299 at Walmart (or less if you get some older one). You could also get by using an old dirt cheap PPC mac (under $100). Rumors abound that CAB can do Paypal but only under MiNT which won't work out with 4MB. You'll have to get a Falcon or a TT to even try, and I've never gotten it to work in CAB despite other people's reports. If you check a local college, decent PC's and Macs are often trashed and free.

Mark

I have Aranym on AMD64 too. What you need to use is the i386 NON-JIT version. The debian package has aranym, aranym-jit and aranym-mmu in the same deb package. Aranym is supposed to work on AMD64 for non-jit binaries but I've never gotten it to work and even one of the dev's hasn't on my system. You also need the 32bit compatibility libraries for SDL but it sounds like you already have em.

My working binary is on http://aoi.atari-source.com/~mduckworth/aranym

Thanks,
Mark

What about HighWire? I've never tried it (yet) but I hear its up and coming.

Thanks.

i tried setting "SDL_VIDEODRIVER gem" in mint.cnf, and this results in
a black screen. I then try swapping apps with ALT+CTRL+TAB, and then I
see a small GEM window for a fraction of a sec, then a crash.

/Joakim

Small update:
I find that when I return to the Manager window I have to move the window (a very small move is enough) so that the top bar updates. This is easy to do because the move bar is near the calendar icon.
Alternative method: Assuming you have Manager module window active. Use ALT+CONTROL + H to switch to main modules window. Change date as described. Hold down the ALT & CONTROL keys press S then H then S. You should now be back in the Manager as active window. Click the Calendar icon and dates should now be updated. This may be the faster method, it uses Harlekins built in macros to switch active windows.

As always only try this if you assume total responsibility for all effects. It works well for me. Be aware that in Gemulator on Windows 98 changing the date in Harlekin as described also changes the Windows 98 system date. That may not be desirable but it is easily reversed either from Harlekin or in Windows.

regards
Maurice

Greetings, everyone!

I am very pleased to announce that STinGadel, the Atari ST multi-user Citadel-type bbs program, is now in 'Beta' mode. I've put up my bbs, Cold Winter Knights, using the software as the official beta site.

I would like to welcome anyone and everyone to log in and give it a test run. Please remember that it *is* on an Atari 1040STe, and as such, it may be a bit slow, relative to today's supra-high-speed machines.

STinGadel's features:

"Room"-based citadel-type bbs system: Each room is a message topic. One can 'goto' each room with new messages, or just 'jump' to a specific room. One can read messages with "F" (read all forward), "R" (Read all reverse), "L" (Latest # of messages), and "N" (New since you last read the room).

* Up to 24 simultaneous connections allowed; each connection is continuously 'polled'.
* VT100-enabled "IRC"-like chat mode.
* Up to 128 rooms
* Sysop-configurable: message memory cache (for speedy message reading/ access), message base size, userbase size, menus.
* Note: There is *no* console mode. All connections *must* be from and through STinG for the moment. I *may* add a console mode, but the stock ST's screen drawing subsystem is *SO* slow, and thus everyone else would slow down.

Requirements:

* Atari ST machine (only originals have been tested; I would like TT or Falcon testers, if anyone is even remotely interested)
* 4 MB memory. (for speed purposes, almost everything is contained in memory, requiring a great deal of free space)
* 10 MB hard drive space -- probably not a problem
* STinG connection. Theoretically, a continuous modem connection *would* work, but who would want that, really -- I'd *HIGHLY* recommend an ethernet (I use EtherNEC personally) connection.
* A static IP, if you want people to be able to log in. :)

Log into Cold Winter Knights BBS with a VT100/ANSI/XTERM connection by telnetting to bbs.coldwinterknights.net

Also, I'm going to continuously update the web site (http://www.coldwinterknights.net) with big sightings, fix-lists, etc, suggestions to be implemented, etc.

One final note, if I may: Remember that it *is* in Beta. I fully expect it to crash during the beta testing period. If you attempt to telnet in and find it hanging, or cannot connect, and so on, that means it's down until I can figure out what went wrong. Thanks for reading, and happy Atari-ing!!

Reading between the lines, could be that this screw is meant to ground
a pad which is meant to control output from the PSU. Next time you have
the unit out see if you can verify this?

Sure - I couldn't stop myself from a little shameless promotion of the club ;-)

> Anyway, where was that one purchased?

Shiuming brought it along, I don't know where he got it from though.

>Hy, do you mean to copy the image of a disk to a normal Atari ST Formatted
>disk, and then write the image "unpacked" onto another disk using the Atari
>ST?

No, what I meant is downloading the image onto a hard disk on the Atari and then doing an image copy to the floppy. But if you don't have a hard drive on the Atari or it is not connected to the web, this won't work.

If you only have connection on the PC, the problem is that the latest PC OSs won't read or write extended floppy formats - but Windows 98 will, so perhaps you could use your laptop? Format the disk to 10 sectors 80 (or more?) tracks on the Atari and W98 should read the disk OK, so you can write the *.msa file to it.

Otherwise, there are apps that allow you to split a file into two or more chunks, and reconstitute them later. There must be one for the PC, hopefully compatible with the Atari ZIPSPLIT.PRG and ZIP-RBLD.PRG.

>So on which kind of PD-Disk is it? Or where it can be?
>I will look for it ;)

Your best bet is on the Belgian Atari server
ftp://chapelie.rma.ac.be/atari
but it should be in some Maus groups too.

The alternative is to link the Atari to the PC via a null modem cable, as Simon describes in his message.

Namco!? WOAH! Why hadn't I heard _that_ before!?
(I guess cuz I stick around comp.sys.atari.8bit and not any arcade-related groups ;^))

> 1986
> (after July 3): A group of Atari Games employees purchased Namco America's

Ah, if this is true, it was quite short-lived, which might help explain
why I hadn't heard about it. :)

<snip>
> 1999

DAMN! That would've been the one I worked on! *sniffle*

It would've had much more natural looking dust and smoke, if I had gotten
my hands on it. :^)

<snip>

So they're not dead, yet. :)

Still, though, what a ride. Thanks for contributing this, Michael!
(Hey, ever edit stuff over at Wikipedia? :))

See someone else's comment on the size of Infogrames. (I'll take their word for it :^))

> There is no way I can see that they are going to
> build a new hardware,

Except, they already _did_. I mean, it's not a PS2, but...

  http://www.atari.com/us/games/atari_flashback/7800

and:

  http://www.classicgaming.com/features/articles/flashback2/

The latter is _actually_ an Atari-compatible device (whereas the original Atari Flashback is based on a Nintendo-NES-on-a-chip).

> People won't Q up to play PacMan on the PSP or Xbox 360,

Define "people." There are a lot of us out here. The first disc I bought
when I got my original PlayStation was the Williams arcade classics disc
(the one with Joust and Sinistar).

Aside from Super Mario World, the only cartridges I have for my Gameboy
Advance SP are classic arcade game compliations. (Pretty much every game
I have _for_ my GBASP were made before the _original_ GB came out!)

> but they won't mind paying a few quid to download it to their phone.

And that's where people like me come in. >:^) I write cellphone games for
a small company in the Bay Area.

Except for all of the classic games they're re-releasing...

http://www.atari.com/us/genre/arcade

* "Retro Atari" for the Gameboy DS (which is apparently pretty awesome,
  though I've never even tried a DS, let alone this game)

* Atari Anthology for PS2 & XBox

* Atari: 80 classic games in one (Windows)

* Atari Arcade (Windows)

* Atari Anniversary Edition (Windows)

* Atari Flashback (a stand-alone console with built-in games;
  not so well-received)

* Atari Flashback 2.0 (coming this summer; highly anticipated)

```

Not yet, but that's a great idea - and pretty easy addition. I will
get to it as soon as possible!

For the record, the Beta board is down at the moment; someone connected
via a terminal that asked for some strange telnet information that I
need to deal with. I'll be working on it when i get home from work and
get it back to going again.

May I suggest the following:-

1) make a PARCP cable and get a copy of the software. It works very well.
Its much quicker than any of the serial solutions I have tried.
The software is cheap (will work as unreged)., the cable is easy to make, I
chopped the "centronics" connector from a printer and soldered a D25 on to
replace and make the cable, and its reliable.
2) Assuming you have a "reasonably" sized ST (say 2Meg) create a RAM Disk on
the STE.
3) copy the image to the ST using PARCP and unpack on the STE.

As I have a hard disk, I have not tried using a RAM disk but I can't see why
it won't work, unless you have a base (1 meg) atari.

Dave

But doesn't Highwire needs multi tasking OS (Magic or Mint) and NVDI? In 4 Megs!

Thinking of replacing my ancient and noisy 100MB h/drive with ICDLink etc on my Mega STE if (and only if) I can get the following working.

In theory:

1) Paskud Interface into cartridge port
2) Instead of attaching IDE device, attach an IDE->Compact Flash card reader from various sources on eBay
3) Insert 128/256/512 Compact Flash cards as and when needed and boot off the drives ...

Anyone else tried this .. I've emailed Paskud and he's said in theory that this is possible, but he's not yet tried it himself?

Short of buying one and sending it to him to confirm, I don't want to take the giant leap .... (albeit a peaceful one compared to my current h/drive!)

Remember the GEM driver is usable only with 8 bits or higher depth (256 colours or True colour modes).

Good news: I found the bug in the SDL IKBD driver.

Bad news: I think this is not related. I had problems in previous versions with the audio, so I think I will make it back switchable on/off.

About Magic: I don't have it, so I can not test anything. I will try to

```
fix SDL stuff with Magic users, but it will take time.

when i first got my falcon, the boot screen would say 'atari' and would
have the memory countdown below it - all in an 80 column screen. suddenly
it displays the above but in a 40 column screen. how can i restore the 80
column boot screen?

the drive select needs to be altered, you may have better luck using the
twisted cable and maybe trying drive B: on the PC.

Control the output? I'm not sure what you mean.
Are you saying this is a fine adjustment for one of the output
voltages?

Right now the Mega STe has been put together again, but if I get
hold of a 68881 I'll be opening up the machine again to install
that, though I'm not sure about opening up the PSU again, but
we'll see. I'll post the results here if I do.

Any other Mega STe users who can look into it?

I believe that this is correct. TOS 2.06 is the first to have built-in
support for HD floppies.

Uwe Siemet did some testing of CF cards and noted that they behave pretty much the same as IDE drives do. Thus I think you can assume the IDE interface would work. It's on my to-do list to try, but I've got CDRW problems at present to deal with.

One thing to note is that CF cards are only good for a few hundred thousand write cycles. You will need to also use a RAM disk for Internet (and other) caches if you want the CF card to last more than a year or two. As a read-only drive, life expectancy exceeds 10 years.

This option is set in the NVRAM among other things. You require one of the many programs that can alter the NVRAM. I use bootconf.cpx myself.

Or you could go for the CF Micro-drives instead. As these are mechanical you dont have the CF's flash write limitations, but you do inherit the potential problems of normal harddrives. Saying that I know of a handful of pro photographers that have been abusing these cards for years without problems. You may get one reasonably cheap. Last time

I looked, in certain capacities they were cheaper than the Flash based equivalent (maybe 4/5Gb?).

FYI, I had problems with my Stacy, an SCSI=>IDE converter, an IDE=>CF converter, and a Viking 512mb CF card. I have a new CF card which I have to try out, but the Stacy has gone to a better home now so I'll do the testing on the MegaSTe (same crappy host adapter though). I guess this is what let the experiment down, and I reckon you'll have better success with the Paskud IDE adapter.

Yes, all the required 32-bit libs are there. I was hoping that I could
continue to use JIT, since it ran very nicely on my older AthlonXP.
I've downloaded 0.9.0beta2 x86_64 compiled for SuSE 9.2 Pro and it
doesn't work either, which makes me wonder why a package created for
x86_64 doesn't work *on* x86_64 hardware and the same OS it was quite
possibly compiled on...odd is what it is! :-(

> My working binary is on http://aoi.atari-source.com/~mduckworth/aranym

I'll have a bit more of a play, then maybe give your binary a go.
Thanks.

To anyone,

Does anyone in this newsgroup know of a guy by the name of Dan DeHulster?? I used to be in contact with him for years. But after late last summer when we all finally found out that Dennis Vermiere had died, he had informed me of this. Which I had suspected all along. I never heard from him agian. I have tried to e-mail him at 2 different e-mail addresses but he does not respond. The messages do not get bounced so he has to be getting them. Any help on this matter would be greatly appreciated.

Thanks,

--
Carey Christenson

Yeah I agree with the PC that if you have serious security issues then you need to spend a LOT of dough on something like a seperate box running Checkpoint, or you could do what I did and have a seperate linux box running IPChains or maybe that freeware firewall, I forget the name now. For most of us, a cheap generic router running the (and not brilliant either) connexant firmware will do an adequate job.

In this case the user here in question wants to connect their TT/Falcon (whoever heard of spyware or virii that make outbound network connections? :-)) - so then in this case the firewall is superfluous.

Hmm, have to agree with most of what you say - considering you're talking about Windoze machines. :-)

I use a Dlink hardware router here, firmware updated, with a Mandriva Linux setup. I run Shorewall as the firewall as well. Again, given that nothing is totally secure, still...I feel *fairly* secure with this setup.

:-)

Hi,

Apologies for off topic post in advance...

Strong Bad is a flash animation cartoon that receives emails from people. One day he get 400,000 virii. The machine throws up a BSOD with the text from my sig. There are others and some are quite funny. Here is the url for those whose interest is piqued. Requires a machine with flash installed.

http://homestarrunner.com/sbemail118.html

take off the 118.html part to see all of the emails...

We now return to our regularly scheduled program...

Folks, I'm looking for a Magnavox Pro. RGB monitor.
It will work on a ST and Atari 8-bit.

Needs to be in good working condition.

If you have one for sale or trade, contact me...

Thanks,
phantomm@bellsouth.net

Hello Mark,

   MB> PLCC

Thanks.

   MB> For 50mhz operation, 32mhz or higher

I know I don't have any more 50 MHz 68882s. I probably don't
have any 32 MHz either. From the sound of things the
original poster already has 16 MHz ones, so I'm probably not
going to be much help. I will have a dig through some old
machines though just to be sure.

- Andy.

Hello,

   P> It is a 16MHz...I'd like to get the 80387SX Co-
    > Processor for it.

Last time I checked, I did have some 16 MHz 80387sx chips.
If nobody has thrown them away, I will be happy to send you
one.

   P> Would love to get it going in a Falcon. I have 2 Falcon
    > -Speed Boards that are nice, but they only have a 286.
    > However, I'd bet that a 386 or maybe even a 486 would
    > work. But I'd have to desolder the 286 chip and put a
    > socket on the board.

486 and 386 chips are not pin-compatible with the 286 (even
though the 386sx chip is similar in some ways).

- Andy Ball.

Hi,

Everyone knows that, there were only a few games on Falcon030, some of them are prety rare and never go outside they onw contry.

To such an extent that many Falcon030 owners think about some of this
games they never existed!
H2o from EKo in fact is one of them, it really exists, do you want a
irrefutable proof?
Then go here: http://eko.planet-d.net

H2o is there and it's a EXCELLENT game, have a good fun with it :)

Xerus / ProToS

PS: do not hesitate to write your greetings to the team, especially if you
enjoy this game, thanks for them!

No Problem...

I am in the USA.

I will pay shipping on items of course and overseas stuff is fine
with me no matter what other folks say.

Hmm, for the life of me, I can't seem to find my original Adspeed
instructions and installation guide.

I've got the Adspeed itself, and the floppy disks/software that came with it.

Can anyone point me to to a site where these can be read or downloaded? I googled for it, found stuff all over, but not these exactly.

Thanks everyone! :-)

Visiting a local drugstore (Het Kruidvat) I saw they were selling "Atari Flashback" gameconsoles for less than 35 euro.

I just got one for $20.00, I dont think its actually made by atari and the
games are okay but not exact. Its supposed to resemble the 7800 but it
really doesnt.
It looks big on the box but is really kinda tiny.
I got it just for the name anyway.
Mo

To everyone,
  Rodolphe sent out an e-mail earlier this week about anyone interested in
in a 100 mhz 68060 Rev. 6 CPU's to let him know. I forget how many he needs
to make this order possible. But lets not let him down!!! Seems to me like
6 was all that he needed, but at a price of 110 euros you cant beat it. So if
your looking for that last little bit of horsepower from your CT60 you need
one of these CPU's along with a CTCM. So get in contact with Rodolphe right
away while you still can.

Thanks,

```

Reason I was asking about making PCB boards is that I have a few
projects that I'd like to put on PCB boards and reproduce them if I
can find a cost effective source here in the US to reproduce them.

Anyone here had experience doing something similar here in the US
that could suggest a company or two that could re-produce a small
quanity of working boards?

BTW, these project boards range from the ST to the Falcon.
But I can't say what they do.

Although based in the UK I used a Canadian company called Myro PCB (www.myropcb.com), they charge in US Dollars. IIRC there was a $50 setup fee for the artwork and it was $0.21 Dollars per square inch for double sided, plated through hole PCB's with solder resist and Top side silk screen. The price does vary with lead time, I went for the standard two weeks although you could get it a little cheaper if you go for a longer time.
Having said that if your PCB software does not produce Gerber files including board outlines I don't know if they will be able to manufacture them. My project required four boards per unit (supplied as one artwork file (panel)), I had enough boards produced for ten units supplied as 40 pieces in total so that they arrived as individual milled to shape PCB's.
They even accecpt PayPal.

Hi
I bought the multi accessory Harlekin3 many years ago. I gave up on it for serious use when I couldn't get the Manager to show beyond the end of Dec 2000 without a lot of hassle.
I called Hisoft in the UK over 2 years ago and they told me they no longer sold or supported Harlekin, had parted company with the author of Harlekin and had no contact address for him. Now promted by a post & response on comp.sys.atari.st I've found the simple work around
and I can start using it after all these years - GREAT. I have it working on a TT and on Gemulator 2000.
Here's the problem & work around for anyone else who needs it. If there's a simpler one please let me know. If there is an update or patch to fix this please let me know.
In the Manager module of Harlekin3 you can show data by Day, Month, or Year. You can move forward/backward one day, month or year as you choose. Advancing by a year it is only possible to go as far as Dec 2000 and no further rendering the manager very inconvenient to use for diary date functions.
Here's the workaround: Delete Harlekins "date_f.prg" from the auto folder - I can't get it to work after 2000. When Harlekin is up and running - in the main Harlekin window click on the calendar icon or date line in the top bar. Set the date to todays date (any date)- click OK.Open the Manager module or click on the open Manager window (don't close the main Harlekin window before doing this). The top bar of Manager should now update to show the system date you just entered but the Diary function may show some previous date. Single click on the calendar icon in the second bar at top of the Manager module. The diary function should also now update. You can

now advance through that year by day or month.
To advance to any year after 2000 repeat the above procedure. Going backwards is easier use one month at a time or the above procedure. It is very much faster to do it than it is to describe it in words.
Strangely you can advance one day at a time from 1999 to any date after 2000 so the code must be there in the program.
16/32 Systems still have Harlekin3 for sale - its a bargain at the asking price.

regards
Maurice

Hi,

after I flamed so heavily against aranym/afros, friendly Francois le Coat sent me an email with a link where to download a hard disk image for aranym/TOS 404 prepared with the HD Driver Demo. With this I was able to run aranym with TOS 404 that detected the C: image.
I am sorry for having stated things about aranym that are wrong. I was so angry because if I don't get a usable Atari-Emulation on Linux I must buy MS Windows and one of the proved Atari emulators for it. I was also able to to get host file access with Beta DOS instead of MinT which I had toggled of expecting better compatibility. But this problem remains on my Linux system as horribly as before. Only about 20 per cent of the programs that run with MagiCMac are working. Can I fix this by changing some settings?
Any advice welcome.

regards Ludwig

Most problems come with fVDI for 2 reasons:
- There is no vectorial font support compare to speedogdos or NVDI and some software need it as Papyrus X
- Video acces is not avaible, all software directing acces video will crash

Solution: Remove fVDI, add vectorial font with speedogdos. Removing fVDI will do able to use Falcon video mode with direct video acces (Videl), compatibility will be highly better, but speed will be very bad unfortunatly, and high video resolution not allowed (the same as a Falcon in fact)

```

If you tell us what programs you have trouble with, we may be able to
help you. Perhaps there is indeed some setting etc that would help, and
otherwise it might at least be possible to let you know if there's any
chance of those programs ever working under ARAnyM.

The ARAnyM developers definitely want to fix bugs!
(But it's entirely possible that the programs in question won't work
 for reasons that aren't actually bugs.)

The best place to talk about your problems with ARAnyM is likely the
ARAnyM user mailing list (see aranym.atari.org).
But if you don't want to join that, feel free to email me.

This is not really a problem, since NVDI works perfectly well together with fVDI, as does SpeedGDOS (not old versions).

And the very latest version of fVDI actually does support vector fonts (using FreeType2), but this is still in its very early stages and not a whole lot of software realizes the vector font support is in there (I'm working on implementing/faking support for the various mechanisms used to detect it).
I still haven't gotten my web site up and running again, so the only way to get hold of the latest fVDI version is to send me an email (or download the sources via CVS and build it yourself ;-).

>- Video acces is not avaible, all software directing acces video will crash

This _shouldn't_ be a problem for GEM software, but I have also seen programs do that (including big commercial packages) for no good reason.
:-(

Often they only do it to check the screen layout (plot a pixel or two and read back the contents of the frame buffer). But it's entirely possible to do that using 100% VDI functions, which does work fine under ARAnyM+fVDI.

Hmm. I just had an idea!
It might be possible to allow restricted reading from the screen for the purposes mentioned above. If we fool the software into reading from a fake frame buffer, it might be possible to intercept those accesses in the same way we intercept hardware accesses, and do the necessary blits from the real screen on the native side.
I need to try this out...

>Solution: Remove fVDI, add vectorial font with speedogdos. Removing fVDI

Or keep fVDI and add vector font support with SpeedGDOS or NVDI. ;-)

You need to remove NVDI's standard screen driver for this to work
(they're called something like *DRV.SYS, IIRC).
I don't think SpeedGDOS requires anything special done, but it does need to be run after fVDI, as does NVDI.

>will do able to use Falcon video mode with direct video acces (Videl),
>compatibility will be highly better, but speed will be very bad

The speed could be improved a bit, but I don't think any of us who work on ARAnyM see that as a priority.

When you can use fVDI with ARAnyM's native code support, things are a _lot_ faster (absolutely blazing speed with the recently developed, but still not 100% finished, OpenGL screen driver) and you can have 32 bit colour in high resolutions.

Olivier is right. With the http://eureka.atari.org/xa-my-aes.zip boot
disk image, there's the way to access to the most compatible config
of ARAnyM. In this configuration, most of the 'Falcon programs' will
work.

The way to proceed is to boot with the image under MyAeS (default)
and to disable fVDI TSR, renaming C:/AUTO/FVDI.PRG. Then you should
use the 'configTOS_4.04' example (instead of default 'config') with the
original ROM image.

You will then boot in a 640x480 resolution with 256 colors, and almost
be able to do what you would do with the real original Falcon.

This is the good way to be sure about what ARAnyM can do, and what
it can't ...

I hope it'll help.

Regards,

```

So rather than simply ask for help or admit that you're clueless, as

TOS 4.04 will guaranteed need an HD driver just like it does on a REAL atari, no instead you yell and curse out the community? You're forever flagged in my book as a complete ass. I don't know if I'll ever offer you even the slightest bit of respect again. You're just LUCKY that other people around here are SO MUCH NICER than they ever should be. And your comments about compilers and assemblers was just fucking hilarious! I mean it's such a stupid comment that it goes out of its way to prove how ignorant you are. It's really quite simple, Aranym is not perfect out of the box and requires quite a bit of configuration usually - this is mostly due to how EXTREMELY FLEXIBLE IT IS. There isn't shit for falcon games that work on MagiCMac or MagiCPC, but they CAN WORK on Aranym. Has ANYTHING you EVER USED ON THE ATARI including THE HARDWARE ITSELF ever worked 100% properly without requiring you screwing with everything? No! That's practically the spirit of Atari itself ;-) So that's my $0.02. I felt someone needed to remind you of what trash you are.

Mark

Received the two chips in the mail today -boy, that was quick!
Looks like a reputable and serious company to me: quick replies,
quick sending of the items and good packing. They even do Paypal,
which is good for me, living outside of the USA.

Ok, so I have the new chips here: a GAL chip (they've been
referred to as GAL chips many places, but I've recently been told
they are PAL chips and can be reprogrammed if needed, just like
EPROMs) for high-density floppy drive support, and one GAL for
68881 math co-processor support.

The high-desnity floppy GAL is a "TIBPAL20L8-25CNT" chip by texas
instruments. I suppose (but don't quote me on this as I'm only
guessing!) that this is a "20L8" GAL chip?
Furthermore, it's marked with the numbers "C301901-002" which I
believe is the Atari part number.

From the abovementioned GAL data file archive available at
Rodolphe's site, the data belonging to it must be the
"MSTE_UA2.JED" file.

Moving on, I received another PAL/GAL. This one is for 68881
support and goes in a socket marked "UB-1" which you'll find if
you remove the leftmost ribbon-cable from the motherboard to the
VME-card connector.
It's a chip marked "TIBPAL16L8-25CN" which I assume is the same
as a "16L8" PAL, but again.... you guessed it! -don't quote me on
this. This is also a Texas instruments chip.
Further markings (as an Atari identification part number I'm
sure) is: "C301903-001".
The correct data file for that chip from the abovementioned
archive should be "MSTE_881.JED".

I would be very interested to hear if anyone with a GAL
programmer is successful at reprogramming these chips, or blank
ones, so they don't need to buy chips from Atari dealers like I did.

I've been in touch with Rodolpe, who's behind the website with
those files. He's explained that the two other files are for some

other projects, though I'm not sure what. Apparently they have nothing to do with the Mega STe.

OK. I'm working on my Mega STe as I'm writing this. I've inserted the two new chips. The connecting wire between the high-density GAL and the 68000 microprocessor is already there as I did that a couple of weeks ago, but I read something strange in the German "Chips'n chips X" file. In German it says:

Wenn die 1.44MB Floppy nicht zuverl�ssig durchformatiert, kann es am Netzteil des Computers liegen. Die Partnummer muss mit -002 enden. Wenn es ein -001 Netzteil ist, muss die mittlere Platinen- Schraube entfernt werden. Ausserdem muss der Stehbolzen, in den die Schraube gedreht war, gegen die Platine isoliert werden. Klingt zwar alles merkw�rdig, ist aber tats�chlich so. Bei der Gelegen- heit kannst du auch gleich nachsehen, ob der "richtige" Optokopp- ler SHARP PC111 eingebaut ist. Wenn es ein CNY17 ist, kann der Bildschirm ein wenig flimmern.

And translated by DDP (from the discussion thread "Re: German text needs translating -anyone?" on the 21st of June 2005), it means:

If the 1.44 MB floppy does not format reliably all the way through, then this could be due to the power supply unit of the computer. The part number must end with -002. If it is a -001 power supply, then the central PCB-mounting screw [presumably of the power supply board - Translator] must be removed. In addition the pillar into which the screw fitted has to be insulated from the PCB. Although all this sounds strange, it is really the case. While you are at it, you can check whether the "correct" opto-coupler SHARP PC111 is present. If it is a CNY17, the screen may flicker a little.

This really has me puzzled!!!!
I have absolutely no idea which screw they're talking about. Yes, my power supply does have a "-001" suffix. There's a big, printed label which rates the input/output voltages, power rating etc., then there's a small, white paper sticker next to it which I assume is the Atari part number. It reads "C301379-001".

What I've done now is open it up.
After removing the power supply from the Mega STe motherboard (careful!!! The power connector that goes from it to the motherboard is really hard to remove. I had to wedge a screwdriver in between, so be really careful that it doesn't slip and scartch up the motherboard!!!!!).... I removed the screws on

each side of the metal enclosure. There are 4 in all.
Then remove the two (long) top screws that go through the cooling fan (you can leave the two lower screws alone).
When that's done you can slide the top metal-cover off the power supply unit.

OK. I'm looking at the power supply circuitry now. Let's see.....
Yes, there is a mounting screw in the centre area of the power supply circuit board. It's next to a black/yellow transformer (there are two transformers in total -this is the biggest one. The smaller one is closer to the power switch).
This must be the screw they're talking about. But I don't feel like removing it just yet. I'm going to re-assemble it, and try out the computer first.

But while I'm at it I'm also going to check for that opto-isolator. I do find a "Sharp PC-111" as one of the two chips on the circuit board. It's towards the opposite end of the switch/fan, and is an 8-pin IC.

OK, ready to try things out. I'm not bothered to re-assemble the metal cover to the power supply (in case I have to open it again), so I carefully re-insert it on the Mega STe motherboard, re-plug the cables, as well as the cables for the hard drive, floppy drive etc.

Keeping my fingers crossed while turning on the power.....
Ouch!!! the screen flickers and I hear a loud "brrrrrrr!!!". Not a good sign, so I immediately turn off the machine, unplug it, and open it up again to see if there's something I've missed.

Ah!!! The monitor connector was plugged in the wrong way (a bit worn after having been unplugged so many times). This is better. The TOS 2.06 "Atari" and its logo comes up along with the memory test. The AUTO programs, ACCessories etc. load. Booting never seemed this long!!!! I'm holding my breath as I insert a 720Kb (DD) floppy that has worked fine before. Yup. The files, come up, so at least I haven't damaged anything :-)

Then comes the ultimate test: I've prepared a HD floppy disk on the PC, with a variety of files. I insert it in the Mega STe floppy drive and hold my breath for what seems like an eternity........

YES!!!! It reads the HD floppy disk. It works!! I'm overjoyed :-)
I can finally use "normal" floppy disks (a bit behind I must admit in a time when Macs aren't even equipped with floppy drives, but better late than never... ;-)

Ready for step 2: I try to format the floppy from the TOS 2.06 desktop (yes, the approproate DIP switch on the motherboard is turned on for the HD format option).

Formatting defaults to "double density" for some reason, so I
assume there's no detection of any kind as to what kind of floppy
has been inserted (bummer!!! I spent a long time working on the
STe (not a MEGA STe, but a plain STe that is) to be able to
automatically detect the floppy used -maybe something can be done
with the Mega STe in order to make it work here as well).

OK, I select "high density", then click on "Start". After a while
a message comes up saying I have 1459200 bytes available, which
must be a good sign :-)
I copy a few files over from the hard drive to the newly
formatted floppy, then insert the floppy into the PC's disk
drive. Yup, I can read the files just fine :-)

So in summary: I've managed to give my Mega STe high-density
floppy drive support! Hopefully this (long winding and detailed)
"story" will help others make it work, without the black smoke
risks I've taken ;-)

All's that left now is to get hold of a 68881 and see if I can be
just as successful to get that working.
Anyone have a 68881 for sale? Not a 68882 as I've read here that
they can cause problems with some programs.

Please calm down ... The error was acknowledged. So it is almost
forgiven. You know that this person was horrified by having to
install Windows on his Linux Box ... He was on a no way end, and
desperate ... Words have gone much further than his real thoughts.

In France, we have real rude words for each other sometimes.
But all ends with a great banquet, everyone laughing and a
dumb bard ;) The diplomacy would expect you to forgive, noticing
that he is not speaking his mother tongue, and that it is probably
a real pain to express himself clearly.

Anyway, he was really rude. I wish that nobody will ever express
himself that way again. That's a real shame on him :(

Best regards Mark,

These threads are getting a bit confusing as I now have 3 or 4
threads concerning more or less the same subject.
I've just successfully made my Mega STe work with HD floppy disks!!!
Go to the thread "Re: Mega STe DMA, HD floppy and other hardware
issues" and read how I did it.

By the way, did you download the "Chips'n chips X" file from my
site? Was it of any use to you?

A correction/addendum to my previous message...
I tried running "Hcopy" (an MSDOS compatible formatter/copier
which I prefer to the TOS desktop formatter) and it froze every
single time.

I removed the 68881 GAL chip I had just received (I popped it
into its socket even though I haven't gotten hold of a 68881
yet), and it worked fine.
So it seems like that 68881 GAL causes problems if it's installed
on its own. Just thought I'd mention it.

Hi Hallward

Congrats! Nice work!
Unfortunately i did not manage to get my MegaSTe in HD mode, even though I have the correct PAL chip and cleared the connection to the 68000.
So now I have ordered an AJAX chip to replace the WD1778ph-02-02.

Is it your modified HD-drive you are using? As I can see on your drive description, there are not any circuitry alteration�s although the physical alterations may com in handy!

Do you think that my german TOS2.05 is the problem. I�m working on purchasing some new ROM�s and program the english version of TOS2.06 into them.

Sincerely
Peter, Danmark

LOL,

Francois, you're probably right. I guess I just don't understand other cultures completely sometimes. But it still ticks me off a bit ;-) I just imagined myself being on the receiving end of that over Gim or something without even being given the chance to properly help someone out with it. But the difference is, Gim is a piece of crap whereas Aranym isn't, despite the arguments over emulators, etc. Aranym is HUGELY useful to me so I don't want to see developers get offended and quit.

And I understand especially French rudeness as it's a bit more toned down than that. He just had some exceptionally harsh things to say - things which simply cannot be taken out of context.. They are what they are.

Thanks Francois,

Mark

> 68000.

Did you check your power supply as mentioned in that other
posting of mine? Might be worth trying out.

> So now I have ordered an AJAX chip to replace the WD1778ph-02-02.

That might be a good idea anyway, but I would assume that a
1772-02-02 should at least work now and then if not always. If
you had no trace of it even once being able to read a HD floppy I
think the problem is elsewhere.
I've been told by Best electronics that many Mega STe machines
have problems with HD floppy drives, being RF interferences or

other things. Try moving the floppy drive cable to another
location inside the machine, or even try it out without the top
plastic casing.

> Is it your modified HD-drive you are using?

Yes. I'm curious however if a non-modified HD floppy drive would
work. But I assume that in any case the drive 0/1 issue still
exists, so that would have to be done.
As for the other modifications, I'm not sure.

> As I can see on your drive
> description, there are not any circuitry alteration�s although the
> physical alterations may com in handy!

Yes -it's absolutely not necessary to cut the casing!
I know this is common practice for many Atari users -to use a
craft knife and cut a big, ugly hole just because the eject
button is different.
Personally I don't want my computer to look "butchered", but
that's just me ;-)

> Do you think that my german TOS2.05 is the problem. I�m working on
> purchasing some new ROM�s and program the english version of TOS2.06
> into them.

Hmm..... could be! I know that there are some issues with 2.05,
but not sure what.
Could it be that TOS 2.05 doesn't have the HD support that 2.06
has? In any case I think you can use a HD cookie setter program
instead, in the AUTO folder, or just run it once, manually.

> Peter, Danmark

That's not far away from here ;-)
Almost neighbours. hehe..

Hy NG,
i have the problem, that i get many times i try to write back a Image of a
Demo to a DD-disk. I try WOSCopier and MakeDisk. The disks are most of the
time 80 Tracks 10 Sectors...
I have no problems with the Game images or Utilities images.
Are there other tools to write not standart ST-Disk images back to Floppy?
Thanks for help
Tolkin

Small update:
  I find that when I return to the Manager window I have to move the window
(a very small move is enough) so that the top bar updates. This is easy to
do because the move bar is near the calendar icon.
  Alternative method: Assuming you have Manager module window active. Use
ALT+CONTROL + H to switch to main modules window. Change date as
described. Hold down the ALT & CONTROL  keys press S then H then S. You
should now be back in the Manager as active window.  Click the Calendar
icon and dates should now be updated. This may be the faster method, it
uses Harlekins built in macros to switch active windows.

As always only try this if you assume total responsibility for all
effects. It works well
for me. Be aware that in Gemulator on Windows 98 changing the date in
Harlekin as described
also changes the Windows 98 system date. That may or may not be desirable
but it is easily
reversed either from Harlekin or in Windows.

       regards
                 BJ

Oh, one more thing...

What do you do to enable the GEM mode in Doom? I read the instructions,
but I must be missing something, because no matter what I try typing
into the .ttp parameter box, I can only get 320x200 fullscreen mode.
The same with other Linux ports (such as M Player) that are supposed to
have a GEM mode. Could someone give me a line that I can more or less
cut and paste into it to get the GEM mode running on any of these
programs? Thanks!

SDL programs are configured with ENVIRONMENT strings, not in parameters.

Floppy?

I have also encountered this problem, my conclusion was that the PC
floppy drive will not write more than 720K to the disk, as disks were
often formatted like this to squeeze upto 800K onto them the result is
that the software fails to write back the final track/sectors to the
floppy and returns an error message instead.
If there is a real solution to this I would also like to know what it
is, a work around is to look at the files in the image and try to
remove any you don't need such as large text instrunction files, or
duplicates of the program file
(eg oni in the root directory and the Auto folder) if you can get it
down to 720K copy the files to a blank disk image and then write that
back to a normal floppy.

I will be very interesting in, because I could test PapyrusX and some
other softwares!

In fact this is not a good reason because in AES there is no way to do
any video access all is in VDI, in fact all VDI software should not use
video direct access! AES have nothing to do with this except manage
windows and screen semaphore. Yes a lot of software done this sort of
trouble, I think some for video detection perhaps, Calamus for example
do this (Calamus is very strangly write and not clean at all I think, a
part possible for it's protection)

I do exactly this in screen.ldg, but now there is EDDI cookie to find
video format.
>
> Hmm. I just had an idea!

> I need to try this out...
Already just support logbase() physbase() with by default a buffer of
the size of the screen and support changing it, there is an option in
fVDI to do this for a part I don't know if all is support, but some
software can run when this option is avaible (Calamus can start for
example), this is done by MagicPC, this buffer is even use by this
software to save restore mouse background (I think when VDI write
something in the screen, it copy it in this buffer), when you use a
software writing directly on screen, and you move mouse I can see what
the software have draw!

Hi Tolkin!

Assuming you are doing this on the Atari, try FastCopy III or Pro. It was shareware but I have seen it on various PD disks. I must admit I have not tried its 'Image copy' function but it ought to work.

Regards, /Peter/

DDP Translations to the rescue! :-) I've left in the original
German, but you may find it easier to read if you delete all lines
starting with the quote chevron.

-------------------- START -------------------
>Trotz HD-Laufwerk und Floppycontroller will der Rechner
>nicht?

Despite HD drive and floppy controller, the computer doesn't want
to know?

>Es gibt insgesamt drei Boardlayouts vom MegaSTE, diese sind
>nicht alle vom Werk aus HD-Diskettenlaufwerk-tauglich!

In total there are 3 board layouts of the MegaSTE, not all of
which are HD floppy drive capable ex-works.

>Hier ein Auszug aus der "Einbauanleitung f�r das HD-Floppy
>Upgra- de Kit" von ATARI:

Here an excerpt from the "Installation for the HD floppy upgrade kit" from ATARI:

>AUSZUG Start
>Beim MEGA STE muss noch �berpr�ft werden, ob eine Verbindung
>von U7 (68000 CPU) Pin 32 zu UA02 (PAL20L8) Pin 19 besteht.
>Falls nicht, bitte auf der Board-Unterseite einen kurzen
>Draht einl�ten. Ausser- dem muss das IC UA02 die Bezeichnung
>C301901-002 aufgedruckt haben. Falls Sie ein IC mit der
>Bezeichnung C301901-001 eingebaut haben, muss dieses
>ausgetauscht werden. AUSZUG Ende

EXCERPT Start
With MEGA STE you still have to check whether a connection exists from U7 (68000 CPU) pin 32 to UA02 (PAL20L8) pin 19. If not, please solder in a short wire on the underside of the PCB (printed circuit board). In addition the UA02 IC has to have the legend C301901-002 printed on it. If you have a built-in IC with the legend C301901-001, then this has to be substituted.
EXCERPT End

>Anmerkung des Autors:
>Wer zu faul ist, die Platine auszubauen, kann auch eine
>Draht- br�cke von Pin 19 UA02 zu Pin 10 U8 (Cache Ram)
>ziehen. Kommt genau das gleiche bei raus, hat aber den
>Vorteil, dass die Platine nicht ausgebaut werden muss. Den
>PAL-Chip MUSS man aber zwingend ersetzen, wenn ein
>C301901-001 PAL Baustein vorhanden ist!

Note by the author:
If you are too lazy to remove the PCB, you can also draw a wire bridge from pin 19 UA02 to pin 10 U8 (Cache Ram). This has exactly the same result, but has the advantage that you do not have to remove the board. However it is ESSENTIAL to replace the PAL chip if a C301901-001 PAL IC is present!

>Es ist egal, ob der Rechner einen DMA-Chip in 40 Pin
>Dil-Ausf�hrung oder in 44 Pin PLCC-4Ausf�hrung hat, die
>obengeschriebenen Massnahmen m�ssen auf alle F�lle beachtet
>werden! Das Pal geh�rt(e) zum Lieferumfang des Original
>HD-Floppy Upgrade Kit (incl TOS 2.06, AJAX Chip und EPSON
>SMD340 Floppy)

It is immaterial whether the computer has a DMA chip in 40-pin DIL format or 44-pin PLCC format, the arrangements described above must be followed in each case! The PAL belongs(ed) to the package of the original HD floppy upgrade kit (inc. TOS 2.06, AJAX chip and EPSON SMD340 Floppy).

>Wenn die 1.44MB Floppy nicht zuverl�ssig durchformatiert,
>kann es am Netzteil des Computers liegen. Die Partnummer
>muss mit -002 enden. Wenn es ein -001 Netzteil ist, muss die
>mittlere Platinen- Schraube entfernt werden. Ausserdem muss
>der Stehbolzen, in den die Schraube gedreht war, gegen die
>Platine isoliert werden. Klingt zwar alles merkw�rdig, ist
>aber tats�chlich so. Bei der Gelegen- heit kannst du auch
>gleich nachsehen, ob der "richtige" Optokopp- ler SHARP
>PC111 eingebaut ist. Wenn es ein CNY17 ist, kann der
>Bildschirm ein wenig flimmern.

If the 1.44 MB floppy does not format reliably all the way
through, then this could be due to the power supply unit of the
computer. The part number must end with -002. If it is a -001
power supply, then the central PCB-mounting screw [presumably of
the power supply board - Translator] must be removed. In addition
the pillar into which the screw fitted has to be insulated from
the PCB. Although all this sounds strange, it is really the case.
While you are at it, you can check whether the "correct"
opto-coupler SHARP PC111 is present. If it is a CNY17, the screen
may flicker a little.

>2 Floppylaufwerke am internen Steckverbinder zu betreiben
>ist ganz einfach. Einfach das Laufwerk mit einer neu
>aufpressten Buchse am Floppykabel verbinden und korrekt(!)
>auf Driveselect B jumpern (ein- stellen) oder die
>Driveselect Jumper ver�ndern. Wird ein PC Floppykabel
>verwendet welches 4 um 180 Grad gedrehte Adern aufweisst

>gejumpert werden, sofern die Laufwerke da mitspielen. Wenn
>es probleme gibt, muss das Kabel auf nichtgedrehte
>Buchsenbelegung durch aufsetzen einer neuen Buchse
>modifiziert werden!

It is simple to connect two floppy drives to the internal push-on
connector. Just connect the drive with a new socket pressed onto
the floppy cable and set the jumper on the drive correctly (!) to
drive-select B, or alter the drive-select jumpers. If a PC floppy
cable is being used that has four wires rotated through 180
degrees, then both floppy drives have to be jumpered to
drive-select 1 (i.e. B), provided the drives go along with that.
If there are problems with this, then the cable has to be modified
to a non-rotated socket connection by fitting a new socket!

>Muss der Blitter aus irgendeinem Grund ausgebaut werden (nur
>dann wenn der Blitter (U205) eh gesockelt ist), m�ssen
>hinterher die L�tl�cher der Widerst�nde R224 und R225 mit
>Drahtbr�cken oder Null-Ohm Wider- st�nden gebr�ckt werden.

If the blitter has to be removed for some reason (only if the
blitter (U205) is socketed in any case), then afterwards the
solder holes of the resistors R224 and R225 have to be bridged
with wire straps or zero-ohm resistors.

>Speicherm�ssig ist ein MegaSTE ohne gr�ssere Umbauten bis auf
>4 Mega- byte aufr�stbar. Mehr Speicher geht nur mittels der
>FRAK und der PAK3 Beschleunigerkarte oder �ber die anfang
>Oktober 1997 erschie- nene MagnumSTE Karte f�r alle MegaSTE
>Computer.

Memory-wise a MegaSTE can be upgraded without much work up to 4 Megabytes. More memory is only possible with the FRAK and the PAK3 accelerator card or the new MagnumSTE card for all MegasSTE computers that first appeared in October 1997.

No, my entry didn't lose.   I didn't have an entry because I've never done
business with Bravo Sierra Computers.

I can recognize and appreciate Ben's KISS philosophy when it comes to his posts and website content. However, this approach makes his post and website very difficult to read if you're not viewing the content in a 40-column browser.

If I might make a suggestion, Ben may wish to have two versions of his website content.   Perhaps if Ben created content for 40-column viewers and for regular viewers, he wouldn't get so much flack over how his advertisements appear.

It would probably go a long way in improving the outward appearance of his business as well.

Call me naive, but if Ben put a little more effort into making his business look professional, he wouldn't have to spam as much.

Just my opinion.

Hey Mark,

That would be most helpful if you could e-mail the docs and software
for the OverScan Board.

I just installed the JRI Genlock in my MegaST4. (Not tested yet)
Only took about 30 minutes. This will be nice, it has a remote control
and
lots of ports. RCA Video In and Out, RCA Audio out, Monitor ports and
etc.

I'd like to have a Good Graphics Card to see if I could get more than
16 colors out of basic displays. However there are some software
tricks to get more than 16 colours displayed at one time.

I believe the OverScan board gets rid of the white border around the
display.

It may benefit some when using the Genlock, if it doesn't already do
that.

Anyway just to make sure, my OverScan board has 2 ICs and a few Caps.
And 10 different colored wires to solder. So without the docs, I have no
clue where the wires are to be soldered. I suppose the software is
fairly small?

Only in still images, spc and spu (spectrum) can do it. FWIR there were
demo's that did 32 colours, maybe 256. But for the purposes of video
capture, I don't think so. You may have issues with the capture software
while running the Overscan cct as well.

Sort of, but not really;-). It just pushes them out

One double density floppy disk, I am e-mailing my home account, so I
don't forget;-).

No more CT63 available !
All are sold.
Same about CTCM

For 060 rev.6 I will check that later...

Regards

Thanks! Much appreciated.
Here's a summary of all that. If someone finds it incorrect,
please correct me!

------------- SUMMARY START -------------------------

Despite having installed a High-density capable floppy drive and a floppy disk controller chip, why won't it work?

There are 3 different Mega STe motherboards variations available. Not all of them are capable of high-density floppy support (without modifications? Not capable of supporting HD floppy drives at all???)

You have to check if there is a connection between pin 32 of the 68000 CPU chip (U7) and pin 19 of the PAL20L8 chip (UA-02):

68000 processor (U7)	PAL20L8 (UA-02)
Pin 32	Pin 19

You could use a multimeter for this.
If there's no connection you need to make one, by soldering a wire between the two ICs, from underneath the Mega STe motherboard.
Also, if the "UA-02" position chip is marked "C301901-001" you need to exchange it with a new chip marked "C301901-002" (note the "-002" suffix).

Note:
If you're not bothered to remove the Mega STe motherboard from the lower part of the plastic casing you can solder a wire between pin 19 of the PAL20L8 chip (UA-02) and pin 10 of the cache RAM chip (U-8). This will give the exact same result as above, but with the advantage of not having to remove the Mega STe motherboard.
However, it is ABSOLUTELY ESSENTIAL that you replace the PAL chip with the "-002" suffix type if you have a "C301901-001".

If you're still having problems (e.g. high density formatting not working reliably), the problem could be due to the Mega STe power-supply unit. The part number should end with a "-002" suffix.
If it's got a "-001" suffix you will have to remove a certain screw

(NOTE: from here on the translation gets a bit sketchy and I
could need some more details from people who know more about the
subject than I do).

------------------- SUMMARY END -----------------------

I have a few cartridge based projects I'd like to get into.

However, I need some fairly bare Atari ST/E- Falcon

Cartridge PCBs.

If someone has a few of these for sale/trade contact me
by e-mail.

Also, I recently got ahold of a original complete PCBoard
Designer package for the Atari ST.

Was wondering if anyone here has used this to make a
complete PCB design?

Also, it seems to only run in Mono.

Has anyone tried running it on a TT or Falcon in a 640x480 color mode?

I know some programs that will work like this as they only check the actual resolution and not the number or colors.

Not tried this one like this yet. But it would sure help to run it in a color resolution.

Regarding the Cartridges, E-mail me at phantomm@bellsouth.net
Overseas offers included, as it seems alot of stuff like this is hard to get in the US now.

If the Cartridge PCBs are no longer available, I would go as far as having some made up, if someone could point me in the right place to get it done.

I need a source for this anyway as I have a few completed boards that I would like to get reproduced, if it will be cost affective.

I got some 2600 PCB's from best, you could try there. I can design PCB's and have they made , or make proto-types, though with the "pro" PCB's you pay per sheet so those little boards you will end up with a lot of them.

If that's the program I remember from several! years ago it came on two
disks? Copy-protected too.

> Was wondering if anyone here has used this to make a

That's what it's for ;-)

> Also, it seems to only run in Mono.

I have a feeling that it wrote directly to screen memory, but...

You should instead try Scooter, which runs in up to 256 colours, and is
also GEM-compliant.

Hmm, it turns the border into usable pixels!

If this is the commercial Overscan board it's very good.

I have just got an ethernec for my TT and want to connect it to a 512k
cable broadband link (Blueyonder/Telewest), who use DHCP. I checked
through the arhices here and saw this has come up efore, and that there
is no DHCP supporting software for the Atari without mint so a router
is the best thing to do.

Any thoughts on which one is best and affordable? Anyone else with a
similar set up with Blueyonder?

Also, are there any that also have a decent firewall as the new
Blueyonder cable modems don't have them built in anymore:(

There are loads of decent cable routers available, and theyre not
expensive anymore, unless you go for the latest wireless spec stuff.

Look here on ebuyer:
http://www.ebuyer.com/customer/products/index.html?action=UFNTaG93UmVzdWx0cw%3D%3D

Loads to choose from, some with hubs and wireless, some not.
If you want a reliable well known brand router with a stateful packet
inspection FW, no wireless, but 4 lan ports you could do a lot worse
than this:
http://www.ebuyer.com/customer/products/index.html?
rb=8378734850&action=c2hvd19wcm9kdWN0X292ZXJ2aWV3&product_uid=45295

Thanks Mark, guess I was thinking about something else. Its good to know
that it does both.

I wouldn't mind getting one for my Mega ST then! :-)

This coming July is my Christmas in July sale. I'm asking for Charity. Business has never been so slow. I'm way behind on my bills and I need to catch up. Summer is the slowest time of year. I've never had it so bad. If Business doesn't pick up soon, there is going to be one less Atari Dealer. A pastor of mine taught, "Make your needs known and Help will come!" I'm not asking for a hand out, I just want to earn your Business & make you a satisfied customer. While business is slow, I relax by playing Atari Video Games. I don't mind waiting since I have the best customers. So goto

http://BenSells.Atari.org

So E-Mail Atari@aracnet.com or Call Ben anytime at (503)256-9974!

http://www.aracnet.com/~atari/whybuyben.htm Ben's Living References!
http://www.aracnet.com/~atari/shipping.htm   Tricks I can Do.

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Yes I know thats what its for, I have a degree in electronics.

I have Scooter, but PC Board Designer looks better in my opinion.

I was just wondering if anyone here had used it to complete a PCB
project?

Hi,

Some of you may be interested in a new book that has been published by
a small specialist publisher. The book reviews and discusses over 200
home computers and consoles, including the Atari 8bit, 16 bit and
console ranges. It manages to pull off the unusual combination of being
really well designed (224 full colour pages) and informative (lots of
interesting facts about the systems, key titles and market history).

Anyway you read more about the book and also have a look at some
example pages at my web site:

http://www.jcec.co.uk/book.html

I'm in regular contact with the author, a really friendly ex-games journalist, if you have questions.

Cheers
John

Hello everybody,

I restarted from original Doom code, to have a cleaner base, than the current 0.31 which was going worse than ever. I also compiled it with a recent SDL version with many bug fixes.

Now, you have:
- Totally dynamic about resolution choice and changes, no more zoomed 320x200. You really can have Doom in 640x400 (or more). With the GEM video driver, you can change the window size, and the game follows.

- The engine always draw in 8 bits, then SDL convert it to the screen format. It should be faster in 8 bits mode with FastRam, because the screen is entirely built in Fast, then c2p-ized to STRam, so less bytes transfered from Fast to ST-Ram.

- Many memory leaks fixes with Valgrind/x86 under Linux.

For SDL, there is also support for Centscreen and Blowup resolutions, and current Screenblaster 3 mode, I need people to test them.

Our local Tesco Metro had some cable routers, looked reasonable price.

Apparently not all stores have them..

> Also, are there any that also have a decent firewall as the new
> Blueyonder cable modems don't have them built in anymore:(
>

I don't think any of the cable routers firewalls are "decent".... Make sure
you don;t use the DMZ address and route only the ports you need.

Also, make sure you update the firmware on any device you do wind up with.

BTW, offtopic, but why don't you think any of the cable routers firewalls are "decent"? (accepting as a given that there is no such thing as being totally secure). :-)

Darn! A couple of days late -I just ordered the two PAL chips

from Best electronics. Oh well, perhaps someone else can benefit
from those files.

PS: the above website says "GAL" chips, but I've been told
they're "PAL" chips.

Anyway I downloaded them out of curiosity, but am a bit puzzled
as to which chips they are for. These are the files:

MODE_26.JED
MODE_HD.JED
MSTE_881.JED
MSTE_UA2.JED

I suppose "MSTE_881.JED" is the GAL needed for use with a 68881
co-processor, and should be inserted in position UB-1 (C301903-001).
And the "MSTE_UA2.JED" is probably the UA-2 chip needed for HD
floppy drive support with the "-002" suffix (C301901-002).

But I have no idea what the other two are for. There were no docs
with the file.
Can someone clear this up?

My experience:
CT60, NVDI, NAES, NTHING, MINT : the welcome screen appears. After a
while NAES restarts
CT60, TOS: doom plays well, but desperately slow (at 95Mhz, boosted mb)

Hi all,

Ok I've put together a LCD from Didier's Eiffel page using a 4x20 LCD
(Vikay 2420STELYGBN). When I fire up the machine I get mostly
scrolling garbage with the date time etc thrown in randomly. Its not
pretty, but I guess its working somewhat. What is needed to fix/modify
so I can get this thing stop scrolling like a out of sync monitor?

Suggestions?

```

I guess it depends what you are after. They don't seem to add much over and above the security you get from NAT. If you are talking Windows boxes and catching out-bound traffic from a PC   then they don't know which app has made the connection. What is trying to connect to port 25. Is it Outlook Express/Eudora/Firebird which is probably OK, or some Trojan, in which case its probably not OK.

In order to figure this out you need to run the firewall on the end device. However even if you run a fire wall on your PC things don't get much better because many of the firewalls prompt when they are not sure. I estimate that
> 99% of PC users don't know which applications should connect on which port...

I also think that protective apps such as firewalls, anti-virus, and spy guards is that the induce a false sense of security. Users click without thinking what they are doing, because they expect to be safe, rather than thinking "is this something I should be doing". Safe Computing is a combination of applications + culture. Most folks don;to think...

Dave.

Hi,

the developers of this shit claim that aranym is something better than an emulator, but in fact it is worse: With EmuTOS/MinT/XaAES only about 20 per cent of the Programs that run in MagicMac are working. papyrus X of course not.
Already the name "Atari running on any machine" is a lie
because it doesn't work with an Atari ROM Image as the test with TOS 404 and a disk image which another user sent to me proved. Only as a diskettes computer.
To the aranym/AFROS developers: Fuck your wives, rape your
girl-friends, make children and keep your hands off things like compilers and assemblers which you have no idea of!

regards, Ludwig

If I would be Aranym developer you would be facing court charges.
Becouse I'm not, you're just facing my killfile.

Hi Adam,

> If I would be Aranym developer you would be facing court charges.
I can easily imagine that people who have no idea of compilers and
assemblers are better in court charges.

regards, Ludwig

```
> I have Scooter, but PC Board Designer looks better in my opinion.

Personal preference of course, but the latter program is restricted as
to what hardware it runs on.

> I was just wondering if anyone here had used it to complete a PCB project?

I made some small boards with it years and years ago.

Maybe your just not smart enough to get it to work (IE, an IQ over 10).
Considering your profane outburst I would bet money on it.

For the sensible people in here: I have experimented with
Aranym/MiNT/Xaaes and have had complete success, even with programs
that will NOT run on my Falcon.

I've considered buying games from this fellow, but I find the spelling and grammar problems in his ads to be a complete turn off. Anyone else feel this way? I guess subliminally I think the service will be bad, or something will go wrong with my order because the spelling and grammar abuse makes him appear incompetent (which probably isn't the case)... It's just not good business to present oneself in such a manner to potential customers.

Not to rush to anyone's defense, but I sent this gentleman an e-mail with
some concerns I had about trying to find a certain Atari product on his
website.  The reply I got was polite, professional, and friendly.  I was
impressed.  If he had the products I was looking for, I would have surely
bought them on the merit of his reply to my original concern.

Lucky guy! :-)
But you still can't read/write HD floppy disks, right?

Have you checked to see what kind of floppy drive is installed
-if it is indeed a HD capable drive or not?

Also, if you have a multimeter, see if there is a connection
between the IC pins I've mentioned in my previous postings.

Hello,

> Need a few good 68882 FPUs for a few Falcons.
> I have the 16mhz ones, need 33mhz or higher.

What physical package do you need? PLCC? PGA?
Does the Falcon let you set the FPU clock independently, or
does it just run at the same speed as the CPU?

> Also need a Math Co-processor for a ATonce 386SX board
> in my MegaSTe. Anyone have a suitable one?

Possibly. How fast is the 386sx in that board?

> Also looking for external CDROM cases with/without the
> CDROM drive.

You might have a look for some Sun 411 boxes. Make sure they
come with the drive mounting bracket though.

Regarding that German text (from the "Chips'n chips version X" HYP file) about getting HD floppy support with the Mega STe... here's what it says (I'd appreciate it if someone understanding German better than me could explain what it says):

-------------------- START -------------------
Trotz HD-Laufwerk und Floppycontroller will der Rechner nicht?

Es gibt insgesamt drei Boardlayouts vom MegaSTE, diese sind nicht alle vom Werk aus HD-Diskettenlaufwerk-tauglich!

Hier ein Auszug aus der "Einbauanleitung f�r das HD-Floppy Upgra- de Kit" von ATARI:

AUSZUG Start
Beim MEGA STE muss noch �berpr�ft werden, ob eine Verbindung von U7 (68000 CPU) Pin 32 zu UA02 (PAL20L8) Pin 19 besteht. Falls nicht, bitte auf der Board-Unterseite einen kurzen Draht einl�ten. Ausser- dem muss das IC UA02 die Bezeichnung C301901-002 aufgedruckt haben. Falls Sie ein IC mit der Bezeichnung C301901-001 eingebaut haben, muss dieses ausgetauscht werden. AUSZUG Ende

Anmerkung des Autors:
Wer zu faul ist, die Platine auszubauen, kann auch eine Draht- br�cke von Pin 19 UA02 zu Pin 10 U8 (Cache Ram) ziehen. Kommt genau das gleiche bei raus, hat aber den Vorteil, dass die Platine nicht ausgebaut werden muss. Den PAL-Chip MUSS man aber zwingend ersetzen, wenn ein C301901-001 PAL Baustein vorhanden ist!

Es ist egal, ob der Rechner einen DMA-Chip in 40 Pin Dil-Ausf�hrung oder in 44 Pin PLCC-4Ausf�hrung hat, die obengeschriebenen Massnahmen m�ssen auf alle F�lle beachtet werden! Das Pal geh�rt(e) zum Lieferumfang des Original HD-Floppy Upgrade Kit (incl TOS 2.06, AJAX Chip und EPSON SMD340 Floppy)

Wenn die 1.44MB Floppy nicht zuverl�ssig durchformatiert, kann es am Netzteil des Computers liegen. Die Partnummer muss mit -002 enden. Wenn es ein -001 Netzteil ist, muss die mittlere Platinen- Schraube entfernt werden. Ausserdem muss der Stehbolzen, in den die Schraube gedreht war, gegen die

Platine isoliert werden. Klingt zwar alles merkw�rdig, ist aber tats�chlich so. Bei der Gelegen- heit kannst du auch gleich nachsehen, ob der "richtige" Optokopp- ler SHARP PC111 eingebaut ist. Wenn es ein CNY17 ist, kann der Bildschirm ein wenig flimmern.

2 Floppylaufwerke am internen Steckverbinder zu betreiben ist ganz einfach. Einfach das Laufwerk mit einer neu aufpressten Buchse am Floppykabel verbinden und korrekt(!) auf Driveselect B jumpern (ein- stellen) oder die Driveselect Jumper ver�ndern. Wird ein PC Floppykabel verwendet welches 4 um 180 Grad gedrehte Adern aufweisst m�ssen beide Floppylaufwerke auf Driveselect 1 (also B) gejumpert werden, sofern die Laufwerke da mitspielen. Wenn es probleme gibt, muss das Kabel auf nichtgedrehte Buchsenbelegung durch aufsetzen einer neuen Buchse modifiziert werden!

Muss der Blitter aus irgendeinem Grund ausgebaut werden (nur dann wenn der Blitter (U205) eh gesockelt ist), m�ssen hinterher die L�tl�cher der Widerst�nde R224 und R225 mit Drahtbr�cken oder Null-Ohm Wider- st�nden gebr�ckt werden.

Speicherm�ssig ist ein MegaSTE ohne gr�ssere Umbauten bis auf 4 Mega- byte aufr�stbar. Mehr Speicher geht nur mittels der FRAK und der PAK3 Beschleunigerkarte oder �ber die anfang Oktober 1997 erschie- nene MagnumSTE Karte f�r alle MegaSTE Computer.
-------------------- END ---------------------

Hey, Don! Off topic, but I was just curious - is the Bear Cavern BBS Atari
based or something else?

Thanks.

See ya.

This connection is not onboard! I�ve made the connection. But I am
unsure about the numbering system of the 68000FN12F.
On your picture I started top right and counted left outer row - then
inner row. Pin 26 is then reached outer row on the bottom of your left
flank (marked with "26" on my mainboard). Pin 32 is the third from the
bottom on the inner left flank!

I checked out Ben's website and catalogs a couple of nights ago and I found his website to be most difficult to read. I'm not terribly impressed with his prices either.

Example:

SX212 1200 baud Modem	$25 U.S.
SX212 1200 baud Modem	$40 U.S.

At first I thought it was a double entry for the SX212 modem. I couldn't figure out why one modem cost $15 more than the other when they are both identical units. Then I figured it out: The $15 premium gets you a manual and a box.

I have to say that I find Ben's shareware prices to be somewhat outrageous. Ben wants $10 U.S. for a copy of a shareware program like BobTerm. If Ben is actually getting people to pay $10 U.S. for a disk with one shareware program on it, I'm going into the shareware distribution business!

Also, on the question of integrity, Ben had a contest where customers were invited to submit "customer satisfaction" testimonials. The customer to write and submit the best testimonial, in Ben's opinion, would receive a cash prize of $25.

I was shocked to learn that Ben awarded the $25 cash prize to a very close friend of his. Most reputable businesses exclude friends and family from eligibility in contests. Not Ben! Ben even goes on to describe how much of a friend the contest winner is.

Note to Ben Smith: Testimonials carry much more weight if they are written by people that you don't actually have personal relations with.

Anyway, I don't anticipate that I will ever be ordering from Bravo Sierra Computers.

Hmmm...You got me with that question. I have 4 Atari Falcons that I'd
like to
upgrade the FPUs in. One is a CT2B Falcon.

AFAIK, Stock Falcon FPUs run at the same speed of the CPU. About 16MHz
IIRC.
However, I think there is a way to run them Faster than the CPU.
But I don't know alot about what can be done to the FPUs in a stock
Falcon.

Some one setup and educate us on this subject.
I need some advice on how fast I can go and what type of FPU I need
in a stock Falcon and anyother tips and info one can share.

Andy,
Not sure if ya know anything about the Atari Falcon, here is some info.

The Centurbo II version B (CT2B) upgraded Falcon runs basically in 2
modes.
The Stock Falcon Mode and the Turbo TOS modes.

If my info is correct.This is the speed of a CT2B Falcon in Normal Mode,
compared to the CT2B Falcon in Turbo Mode.

```
NORMAL                           CT2B TURBO
-------------------------             --------------------
CPU              16MHz         50MHz
```

BUS	16MHz	50MHz	
FPU	32MHz	50MHz	
DSP	32MHz	50MHz	
FastRam-	None	50MHz	FAST RAM
VIDEL (INT)	32MHz	50MHz	

The C2TB Falcon Upgrade has 2 basic modes of operation. The Turbo Modes and the stock standard mode. The Standard Mode suppose to run just like a normal unmodified Falcon.
The Info in the NORMAL Column above should be the same for a Standard Stock Falcon AFAIK. If something is not right, then someone correct me. I'm not 100% sure that a stock Falcon FPU runs at 32Mhz as the CT2B has it's own FPU socket. So some one who knows needs to confirm this.

Now in a normal Factory Atari Falcon there is a Socket for a optional FPU.
Some folks got the FPU when they bought the Falcon new, others installed one later or not at all.

My upgraded Falcon with the CT2B board includes it's own FPU socket.
According to the CT2B docs I'm reading, the co-processor is 32-bit wired,
(16-bit on a basic Falcon)
According to the docs, I will need at least a 68882 33Mhz FPU to run at 50MHz.
Anything under that will not run correctly at that speed.

Now on my Fairly stock Falcons. I'm abit confused as to the type and speed I need.

I've read were folks have over clocked them and etc.
These Falcons are mostly stock, except for things like a TT Touch keyboard upgrade and etc that shouldn't effect the speed of the machine.

I do have a Internal BlowUP Hard installed in one of them, which greatly improves the Video Modes, It might increase the display speed slightly, but shouldn't have any effect on the FPU AFAIK.

I'd like to run the fastest FPUs possible without problems. And if I have to change a clock or something fairly simple, then I can do that. Also, I may be upgrading one or two of them with modest upgrades. I have a Nemesis 25/50mhz that I might install in

one.
This would allow the FPU to run faster IIRC.
So, I'd like to get the fastest ones that I can use in a stock Falcon
that will run
at a higher speed if I upgrade, so I won't have to buy faster FPUs in
the future if
I do install minor or major upgrades.

I could use some input on using FPUs in stock Falcons.
And also what the next highest 68882 FPU speed is over 33Mhz as I might
want to install one faster than 33mhz in my CT2B.

>
> > Also need a Math Co-processor for a ATonce 386SX board
> > in my MegaSTe. Anyone have a suitable one?
>
> Possibly. How fast is the 386sx in that board?

It is a 16MHz, 32Bit CMOS CPU. It is fitted with the optional 512KB
vortex FastRam.
I'd like to get the 80387SX Co-Processor for it. Then It would be a full
board. 8-)
It also operates with the Cache Ram of the MegaSTE.
I suppose the 80387SX Co-Processor also runs at 16mhz.

Not a bad little board actually. It can be installed in a 1040ST,
1040STE, MegaST and MegaSTE.

Would love to get it going in a Falcon. I have 2 FalconSpeed Boards that
are nice, but they only
have a 286. However, I'd bet that a 386 or maybe even a 486 would work.
But I'd have to
desolder the 286 chip and put a socket on the board. Thats a project of
mine thats been
on the back burner for some time. 8-)

Anyone out there that uses a FalconSpeed or other PC board emulator on a
Atari, I'd like
to hear from you. Send me a e-mail.

>
> > Also looking for external CDROM cases with/without the

> come with the drive mounting bracket though.

I've seen some of those. Actually I can make use of the early External
SCSI CDROM Drives with the Centronic ports on the back of the case.
These drives are usually old 1X or 2X speed. Doesn't matter to me
if the CDROM drive works or not.
If anyone has 1 or more of these and don't need them, send me a e-mail.

>
> - Andy Ball

Thanks for you input Andy.

General rule is you can get just under twice the speed from the chip
safely, that Motorola badge the 68882 at.

I.e

For 16mhz operation, 16mhz or higher
For 25mhz operation, 16mhz or higher
For 32mhz operation, 25mhz or higher
For 40mhz operation, 25mhz or higher
For 50mhz operation, 32mhz or higher

And so on, the chip required for the MegaSTE and Falcon is of the PLCC
variety that includes the CT2. Not sure of the TT, but fwir, the vast
majority of TT's had the co-pro from factory, and only really early
models were devoid.

The FPU clock on the Falcon/TT is asynchronys. So you can overclock the
FPU without interfering with the timing of other system components. The
CT2 is cranked pretty hard, and overclocking that, probably won't be
easy. Stock Falcon FPU is 16mhz IIRC. A stock CT2 is 50mhz FPU, so
putting a faster than 32mhz achieves nothing. The clock needs to be
replaced in order to do that.

50mhz

> Now in a normal Factory Atari Falcon there is a Socket for a optional FPU. Some folks got the FPU when they bought the Falcon new, others installed one later or not at all.

Also fwir, all Falcon's were sold without an FPU, except for some developer models. Some places were authorised to fit them without voiding the warranty, and were sold in that fashion.

> My upgraded Falcon with the CT2B board includes it's own FPU socket. According to the CT2B docs I'm reading, the co-processor is 32-bit wired, (16-bit on a basic Falcon) According to the docs, I will need at least a 68882 33Mhz FPU to run at 50MHz. 100% correct.
>

> Now on my Fairly stock Falcons. I'm abit confused as to the type and

16mhz for stock
>
> I've read were folks have over clocked them and etc.
> These Falcons are mostly stock, except for things like a TT Touch

Again, the FPU clock on the Falcon/TT is asynchronys.
>
> I do have a Internal BlowUP Hard installed in one of them, which greatly

None at all.
>
> I'd like to run the fastest FPUs possible without problems. And if I

That is exactly how you do it.

Also, I may be upgrading
> one or two of them
> with modest upgrades. I have a Nemesis 25/50mhz that I might install in

> This would allow the FPU to run faster IIRC.

Probably 25mhz, because unmodified the FPU runs at bus speed.

40mhz iirc, but it will make no difference to you CT2, as it is already
running at 50mhz.

I have a Overscan Board for a MegaST. However I have no software or
Docs for the installation.

Anyone have the docs and or the software?

Also, what results does this board allow and will it work in anything
other
than a Mega ST?

I have them at home, I will zip and mail for you.

Anything with a video shifter afaik. ST/F/M/FM and MegaST.

> This connection is not onboard!

Please verify first if my understanding is correct (my German,
especially technical-German, isn't any good, so I might have
totally misunderstood), but I *think* that it means to connect
pin 32 of the 68000 processor to pin 19 of the UA-2 "PAL" chip.

> I�ve made the connection.

Good.

> But I am
> unsure about the numbering system of the 68000FN12F.

I see. Better not turn on the computer before that's been checked
out properly.

> On your picture I started top right and counted left outer row - then
> inner row. Pin 26 is then reached outer row on the bottom of your left
> flank (marked with "26" on my mainboard). Pin 32 is the third from the
> bottom on the inner left flank!

I used the pinout from the "Chips'n chips X" HYP file. I've taken
a screenshot of it which I've uploaded here:
http://home.c2i.net/w-460389/mste_68000_pinout.gif

If I'm not completely mistaken (again, someone correct me if I'm
wrong), pin 1 is denoted by a "dent" or a "hole" in the chip
itself. It's marked with an asterisk (*) in the pinout image.

Hmm, did that device work with both color and mono monitors or just mono?

Thanks.

Hi Hallward

Thanks to your excellent pinout of the 68000NF.
It tested the connection pin32 (U7) - pin19 (UA02) and it was already
implemented on the mainboard.
So it should work!

There are two options:
1/ Either the WD1772ph02-02 is not spec�ed correctly on my machine.
2/ The HD diskdrive (Teac FD235) is not working.

If it is option 1 - do you know where to get hold of an Ajax?
To test option 2, i will try with another HD drive - however it is not
easy to get hold of the Epson SMD340, which came with the original
upgrade kit.

Is there any possibility to upload the "Chips'n chips X" HYP file to
your FTP server, or is it copyrighted?. I think a lot Atarians could
benefit from this!

How is your MKS-80?

Sincerely
Peter, Denmark

Coda!

The information you are looking for is in the 'man' files (man as in
manuaul.) Alternatively in 'info'.

But I agree, having the ringbound summary on ones desk makes programming
soo much easier. Lattice is an investment I will never regret. Not least
for the durable documentation.

Good. But there were also some other things that needed checking according to that German text. But alas, my German is pretty lousy, so it needs to be translated first to get the full meaning.

>
> There are two options:
> 1/ Either the WD1772ph02-02 is not spec�ed correctly on my machine.

A third option is that there might be some jumpers that need changing around. Does the disk drive work in DD mode, or doesn't it work at all?

> If it is option 1 - do you know where to get hold of an Ajax?

I think it may be available from Best electronics. I just ordered the two MegaSTe PAL chips from them today.
Here's the "Atari custom ICs" page:
http://www.best-electronics-ca.com/custom-i.htm

If they don't have it there you could try asking them. I've never dealt with them until a few days ago. Someone else in this group recommended me to get in touch with them when I was asking where I could get those two PAL chips, and I've seen them mentioned many times here, so I assume they're one of the "good guys" unlike certain other Atari ST dealers/companies...

> To test option 2, i will try with another HD drive - however it is not easy to get hold of the Epson SMD340, which came with the original upgrade kit.

Why would you need an Epson SMD-340?
I'm certainly not going to search for a special (and probably very expensive) floppy drive when a standard PC drive should work fine. At least it worked fine on my STe, so I assume it'll work fine in the Mega STe as well. I've been using it in DD mode for a few years already, and with the slight modification I'm pretty sure it'll work in the Mega STe in HD mode as well.

> Is there any possibility to upload the "Chips'n chips X" HYP file to your FTP server, or is it copyrighted?. I think a lot Atarians could benefit from this!

I'll see what I can do.

> How is your MKS-80?

So we've been in touch before!?
In some MIDI related newsgroup or mailing list?
Actually, the MKS-80 was a friend of mine's, and I tried to fix it for him.
On the other hand I have an MKS-70 which is working great!

As a longtime Atari Logic/Notator user I would be hard pressed not to
have been in contact with you before! (Probably in a Midi related NG).
I just remember that you were well equipped on the Roland MKS range. I
have MKS-7, 30, 50, 70 and 80. I bought the MKS 80 from a Norvegian
guy - I guess it was�nt you!
I had problems with some of the Midi Signal diodes in them - so i
shifted them all to blue ones! Cool.

Trying your link!

It's uploaded now:  ftp://gem.win.co.nz/hall/info/chips_x.zip
Be aware however that it's a HUGE file at over 6 Mbytes!!

If you're interested in reading about how I modified a standard
Sony HD floppy drive for use with my STe (and now my Mega STe)
you can download that from here:
ftp://gem.win.co.nz/hall/hardware/sony_144.zip

Thanks Mark, I was just curious. Seemed like I remembered something like
this enhancement, but I thought it was for mono only.

I've mentioned that German "Chips'n chips version X" hypertext
(.HYP) file several times here, so due to popular demand I've
uploaded it here: ftp://gem.win.co.nz/hall/info/chips_x.zip

Be warned however that this is a huge file at over 6 Mbytes.

A couple of others along with myself are looking into how to
upgrade the Mega STe with a HD floppy drive among other things. I
found some tips and information about this issue in the German
"Chips'n chips version X" Hypertext (HYP) file.
(by the way, I've just uploaded that file (which contains a
wealth of hardware information for all Atari ST computers) and it
can be found here: ftp://gem.win.co.nz/hall/info/chips_x.zip)

Anyway, since my German (and especially technical-German) isn't
that good I could need some help in understanding what it says.
I've tried a rough word-by-word translation using Altavista's
online translation service, but there are still quite a few
things I don't understand.
Can someone out here help?
Thanks :-)

Here's that text:

-------------------- START -------------------
Trotz HD-Laufwerk und Floppycontroller will der Rechner

nicht?

Es gibt insgesamt drei Boardlayouts vom MegaSTE, diese sind nicht alle vom Werk aus HD-Diskettenlaufwerk-tauglich!

Hier ein Auszug aus der "Einbauanleitung f�r das HD-Floppy Upgra- de Kit" von ATARI:

AUSZUG Start
Beim MEGA STE muss noch �berpr�ft werden, ob eine Verbindung von U7 (68000 CPU) Pin 32 zu UA02 (PAL20L8) Pin 19 besteht. Falls nicht, bitte auf der Board-Unterseite einen kurzen Draht einl�ten. Ausser- dem muss das IC UA02 die Bezeichnung C301901-002 aufgedruckt haben. Falls Sie ein IC mit der Bezeichnung C301901-001 eingebaut haben, muss dieses ausgetauscht werden. AUSZUG Ende

Anmerkung des Autors:
Wer zu faul ist, die Platine auszubauen, kann auch eine Draht- br�cke von Pin 19 UA02 zu Pin 10 U8 (Cache Ram) ziehen. Kommt genau das gleiche bei raus, hat aber den Vorteil, dass die Platine nicht ausgebaut werden muss. Den PAL-Chip MUSS man aber zwingend ersetzen, wenn ein C301901-001 PAL Baustein vorhanden ist!

Es ist egal, ob der Rechner einen DMA-Chip in 40 Pin Dil-Ausf�hrung oder in 44 Pin PLCC-4Ausf�hrung hat, die obengeschriebenen Massnahmen m�ssen auf alle F�lle beachtet werden! Das Pal geh�rt(e) zum Lieferumfang des Original HD-Floppy Upgrade Kit (incl TOS 2.06, AJAX Chip und EPSON SMD340 Floppy)

Wenn die 1.44MB Floppy nicht zuverl�ssig durchformatiert, kann es am Netzteil des Computers liegen. Die Partnummer muss mit -002 enden. Wenn es ein -001 Netzteil ist, muss die mittlere Platinen- Schraube entfernt werden. Ausserdem muss der Stehbolzen, in den die Schraube gedreht war, gegen die Platine isoliert werden. Klingt zwar alles merkw�rdig, ist aber tats�chlich so. Bei der Gelegen- heit kannst du auch gleich nachsehen, ob der "richtige" Optokopp- ler SHARP PC111 eingebaut ist. Wenn es ein CNY17 ist, kann der Bildschirm ein wenig flimmern.

2 Floppylaufwerke am internen Steckverbinder zu betreiben ist ganz einfach. Einfach das Laufwerk mit einer neu aufpressten Buchse am Floppykabel verbinden und korrekt(!) auf Driveselect B jumpern (ein- stellen) oder die Driveselect Jumper ver�ndern. Wird ein PC Floppykabel verwendet welches 4 um 180 Grad gedrehte Adern aufweisst m�ssen beide Floppylaufwerke auf Driveselect 1 (also B) gejumpert werden, sofern die Laufwerke da mitspielen. Wenn es probleme gibt, muss das Kabel auf nichtgedrehte Buchsenbelegung durch aufsetzen einer neuen Buchse

modifiziert werden!

Muss der Blitter aus irgendeinem Grund ausgebaut werden (nur dann wenn der Blitter (U205) eh gesockelt ist), m�ssen hinterher die L�tl�cher der Widerst�nde R224 und R225 mit Drahtbr�cken oder Null-Ohm Wider- st�nden gebr�ckt werden.

Speicherm�ssig ist ein MegaSTE ohne gr�ssere Umbauten bis auf 4 Mega- byte aufr�stbar. Mehr Speicher geht nur mittels der FRAK und der PAK3 Beschleunigerkarte oder �ber die anfang Oktober 1997 erschie- nene MagnumSTE Karte f�r alle MegaSTE Computer.
--------------------- END ----------------------

Never heard of a PLIP cable. What is that? Can you buy them or do you have to
build it?

From...
http://desnoyers.org/retrochallenge/

Introduction
Do you depend upon modern computers, or are you a creative spirit who can push the limits of your old hardware in order to fulfill your everyday needs? The Retrochallenge is where you find out. This competition promotes the use of vintage hardware by establishing up three challenges. You are encouraged to enter any or all of theses challenges, to judge the creative works of other participants, or simply join in the discussions on our mailing list.

What are these challenges? If you enjoy creating original artwork, music, or programs on your legacy computer, then the creative challenges are for you. Simply do what you normally do, then submit your work to be judged by your peers. The second challenge is simply using a qualifying computer through the month of July, in a competition to see can survive a month without the latest in gadgetry. The third challenges judges how well you could communicate with the outside world on a retrocomputer.

So what is the prize? The excitement of participating in the challenge (everyone gets that one), and the respect of your peers. In order to help you gain the recognition of your peers, MLAgazine has gratiously offered to publish an article about the winner.

(68000 computers get a x3 modifier compared to the standard '030 computers which will be a modifier of x1.)

You think you got what it takes? :)

Doctor Clu

: I have done business with Ben before. Nice guy...

Ed,

I agree that he is probably a great guy, but what people are saying is that his continual posting and multiple posting of his ads does give the impression that he is desparate to sell his goods.

The Apple II groups has a special place for such ads, and there should be one for Atari 8 bit groups as well, if there isn't one already. That would be the place to post his ads where people would go if they were in the market for Atari items.

Of course, there are those who just need something to complain about and we have those in all groups, not just in the Atari-8 group.   :o)

Hi all,

The sources for the once commerical text editor EditPlus has been
released by the author, Craig Harvey. This application had a vast
number of powerful features and is of course a very vital addition to
The Orphaned Projects Page.

You will also note that the source package contains a binary version of
EditPlus. To read more and download the files, follow the link below:

http://topp.atari-users.net

Regards,

/Joakim

I too discovered the DSP mod is clearly wrong as I sourced 9V and the DSP oscillator got very hot. However the FPU oscillator only gets hot if I use a 66MHz one, not slower ones.. Even when the oscillator is getting hot, the fpu itself is quite cool and produces accurate math. +5 is sourced from the large round capacitor near the power supply and I metered

it to be sure. The master clock was changed from 32MHz to 40MHz (won't
take any higher), and the videl external clock also has 40MHz going to it
IIRC.. YMMV ;-)

Thanks,
Mark

Ronald,

NO, this work was done on a C-Lab Falcon MK II that I acquired as a backup. I am not trying to boost this computer as much like my CT60'ed Falcon. Granted it does not score know where near what the CT60 does in alot of areas accept for the Graphics area. BUT, with a 40 percent playing of MP3's at 128 kbit/sec and 45 at 160 kbit/sec this computer is VERY useable now!!! Plus not to mention I am using the Eclipse on that Falcon computer so I dont have to worry about dealing with the CT60 and that issue at this point. WAITING for the SuperVidel.

Thanks,

--

Hey all,

I just fired up one of my TT's and it started to smell funny. I quickly unplugged everything and took it apart. The battery had exploded some time ago and sprayed all over. Rust was all over the back. I'm now going to soak the board in some baking soda and water to remove the acid. It looks like there will be a lot of parts replacement back by the SCSI port. The battery connector is charred badly. Anyway going to try and resurrect this thing.

If anybody has access to schematics for a TT, please contact me...

I hope to save somebody elses bacon....

Move your batteries to the outside the case if possible and keep an eye on them...

Rory

NO WATER!!! NEVER USE WATER!!!

Use clean alcohol instead. Vodka would do.

After looking thru my Mega STE Manual, I notice that the 2 modem ports
are wired abit different.

What was the reason, for this?

Should I stick with modem 1 or can modem 2 be used as wired?

In the future, I would like to use a Null Modem Cable on one of the
Modem
ports and use the other for Net access at the same time if possible.

Anythoughts?

One important thing to know: A major difference between EmuTOS and TOS404 is that EmuTOS has a builtin harddisk driver, TOS404 hasn't. When using TOS404 you should install a hard diskdriver. HDDRIVER is the best, try the demo version to get started.

I had the same experience with an Apple II+ computer of mine.
Actually it exploded while I was using the machine! Sounded like
a loud firecracker pop or something. Fortunately it didn't damage
anything else, or cause any shortcircuits, but the battery itself
was ripped in two.

Anyone know *why* this sort of thing happens now and then?
I believe the particular battery was a 3.6 rechargeable type.
Makes me worry about the battery inside my Mega STe -I haven't
taken a close look at it, so does anyone know if it's a
rechargeable type or something else?

I would try some ST emulator sites. They usually have dumped disks online.

Carey you could either use the ftp protacol for transfer or else try the
MagicNet version of BNet. Both work great transfering files to and from my
Hades and STe.

In our old workshop we used soapywater since day 1, though only a spot on
soap else it may leave a residue. A lot of manufactures of equipment also
say the same.

Well, initially i use some water, scrubbed gently with soft toothbrush
and q-tip swab, then used 99% rubbing alcohol to the area and set it
in a window to dry. there is some damage to the SCSI port, floppy
motherboard connector and the 3 pin connector nearest the floppy is
trashed.

Vodka would've done ME some good... :)

Really? First Apple ][+ I've heard of with a battery - unless it was on
an expansion card ;)

Yes, a clock-card with a battery.

  Best way imho is PLIP cable. I had Falcon connected to TT (with riebl
Ethernet card and cable modem) for years. TT acted as router and ip
masquarading, so net acces from TT to Falcon was transparent...
HTTP,FTP,NFS whatever worked great. Speed was okay as well, up to 120kb/sec
(tt<>ct2 machine) 2 problems: it takes parallel port and require MiNT,
don't know if MagicNET would work with PLIP drivers. Magic surely can't act
as router/masquarading,  but FTP access would surely be possible..

Hi Hallward

v2.5 gives TOS error 35 when launching. Could you try it out on your ST?

I do not know what TOS error 35 means.

Thanks in advance.

Peter

Don't be mislead by the names. Use Serial 2 for preference. As with Modem 2 it uses the much faster SCC chip, but it has more controls.

```

Everyone,
  I just asked Rodolphe if I could get one more 68060 rev. 6 100 mhz CPU and he told me that he needed 2 more for a CT63 users, one for me and one for another person and that he only needed 6 people to be able to place an order. That means 2 more people are needed. Anyone willing to buy just the CPU's from Rodolphe or place any other kinds of orders should jump on the band wagon now. Come on if you have a CT60 now you know how fast they are. Going to this new CPU will get you about a 50 percent increase in performance. You cant get any better performance for just a few bucks out of the atari world. So if you want another 100 mhz CPU or are needing one for your CT60 or CT63 be sure

to get ahold of Rodolphe.

Thanks,

```

Hi Uwe,

I have a ICD Link II, will this allow up to 1 gig per partition on a
1040STe or MegaSTE? Or
is there a limit within the TOS versions?  I know the Falcon can handle
upto 1gig partitions.
But I'm not to fimilar with limits on the MegaSTe TOS 2.06 and 1040STe
Tos 1.62.

Anyhow, I'd like to know the max size drive I can use inside the MegaSTe
using the stock
Atari hard drive system and what the partition limits are with the
internal harddrive.

Thanks for any help,
phantomm@bellsouth.net

Hey Folks,

I have a few 68882 FPUs from Falcons and I had intended on placing one in my MegaSTE TOS 2.06, but now I'm abit confused. Some say 68882 will work with no problems, others say get a 68881. My 68882s are 16Mhz, Which program or programs should I watch for if I install the 68882?

I mostly do Graphics/Video/ and Music work and was planning on putting all the CAD 2.0 and support software on this machine. Anyone know of a problem with this setup.

I'd also like to test the FPU with some software to see what happens.

I also have a Vortex 386SX board installed with the 512K FastRam option.
I need the 80387SX Co-Processor for the board if anyone has a source for it.

A nice graphics card would be cool as well if someone has one for sale/trade.

Where are all those Crazy Dots cards, Reflex cards and the others?

I do remember someone releasing a fix for some of the clock carts prior to Y2K.

I have it here somewhere, just have to find it.

Not sure if it will work on the timekeeper.

It may also be on some FTP site.

I acquired a JRI Genlock for a Mega ST awhile back.

To install, you have to remove the VideoShifter and plug the Genlock in its socket.

Now, they were suppose to make versions for the STE, maybe the MegaSTE.

My question is, Does the 1040STE and MegaSTE use the same type of VideoShifter as the MegaST?

And how about the TT and Falcon? Are they the same or different.

I have a Factory 4meg MegaST to put the JRI Genlock in. But if the videoshifter is the same in a 1040STE or MegaSTE, I may try to install it
in one of those instead. Especially the MegaSTE with the extra speed and colours, if there is enough space.

The MegaSTE has a completely redesigned shifter, called the GSTshifter
iirc.

The MegaST has the same shifter as the ST/F/FM/M and all the hardware
addons are only comptible with these machines.
TT and Falcon are both different again. Sorry:-(

Mark

TOS 1.62 limits the partition size to 512 MB. You need MagiC or MiNT to
lift this restriction.

> Anyhow, I'd like to know the max size drive I can use inside the MegaSTe
> using the stock

There is no maximum size for the drive's capacity, but only a maximum
size to the partition size (depending on TOS) and the capacity of the
drive you can acutally access. The latter depends on the host adapter
and the hard disk driver. Without an ICD compatible adapter you cannot
access more than 1 GB of a drive. With an ICD compatible adapter there
is no such limit, provided you use a hard disk driver that can access
more. AHDI, in particular, cannot access more than 1 GB of a SCSI hard

disk, regardless of your hardware.

That means 2 more people are needed. Anyone willing to buy just the CPU's from Rodolphe or place any other kinds of orders should jump on the band wagon now. Come on if you have a CT60 now you know how fast they are. Going to this new CPU will get you about a 50 percent increase in performance. You cant get any better performance for just a few bucks out of the atari world. So if you want another 100 mhz CPU or are needing one for your CT60 or CT63 be sure to get ahold of Rodolphe.

Ah, if only I had those "few bucks"! My 66MHz CT60's great, but... : (
I always seem to not have the cash on hand when these opportunities arise. Wish I could help!

Hi Freinds

I am investegating the opportunity to upgrade the 68000 CPU on my
MegaSTe - but i cannot find it! Is it not in the same (large) shape
and format as in a normal ST?

As for the HD disks i purchased the ED/HD interface hardware upgrade,
containing both GAL and Clock crystal from www.wbsystemtechnik.de.

However i have not had success in this project - propably because the manual is in german. The upgrade is complemented with a software disc, which, unfortunately, also seems rather undocumented.

In a another thread, somebody talks abaout a magic dip-switch to make everything work? Where is this?

Can anybody explain the function(s) of the jumpers located around the motherboard?

Thanks in advance.
Peter Feddersen

Anyone remember Lords of Chaos? Well do you remember a little shareware piece that preceeded it? I think it was called Sorcerer or something, but I can't seem to find any info on it...

It was all played on one screen and you got a sorcerer with a totally random selection of spells, mostly summoning some monster or another, or you could summon magic trees which spread and magic slime which spread and ate whatever it touched, or magic fire, same deal. All the sorcerers were named with some prank call name like Ben Dover. You could play with multiple players or against PC sorcerers.

I think I found it.

Name was Chaos - The Battle of Wizards. IMHO a better game than Lords of Chaos.

And for fun here's a little java version of it I found on the web as well...

No. It is a square 68-pin PLCC package, which is BTW clearly labeled as MC68000 ;-)

It's a PLCC type (square shaped) IC as the one used in the STe. You'll find it in front of the power supply. In my Mega STe it's marked as follows, but I believe different variations of the 68000 were used:

http://home.c2i.net/w-460389/mste_68000.jpg

> As for the HD disks i purchased the ED/HD interface hardware upgrade,
> containing both GAL and Clock crystal from www.wbsystemtechnik.de.
> However i have not had success in this project - propably because the
> manual is in german. The upgrade is complemented with a software disc,
> which, unfortunately, also seems rather undocumented.

As far as I know, such an upgrade is completely unnecessary for the Mega STe as it already has provisions for HD floppy drive support (but not ED -who uses that anyway?), though not all Mega STe machines have it enabled.

I have an older Mega STe which I want to use a HD floppy drive with. The drive has been modified for use in an STe for use with a HD/DD interface such as the one you have, but the Mega STe just doesn't have the support for it yet.
 From what I've read, if a Mega STe doesn't already have a working HD floppy drive factory installed you have to:

1) buy a HD floppy drive of course. I'm not sure if just about any "standard" PC type HD floppy drive will work, or if it has to be (slightly) modified like mine if you don't use the one that Atari put into Mega STe machine (I believe it was an Epson something).

2) get a PAL chip marked "C301901-002" replacing the "C301901-001" (note the suffix) which you most likely already have. It's chip "UA-2" which you'll find right in front of the power supply.

3) Don't quote me on this as I've (hopefully correctly) translated this from German, using the information for the Mega STe (old board) section of the "Chips'n Chips version X" HYPertext file, but I believe the newer boards (*with* full HD floppy support, delivered with HD floppy drives from the factory) had a wire-trace between that PAL chip and the 68000 processor which wasn't present on older boards, so a wire has to be soldered between pin 19 of the "UA-2" PAL chip, and pin 19 of the 68000 processor ("U-7" chip). But again, don't quote me on this! I take no responsibility of fried or malfunctioning Mega STe boards!!!

4) Not to start that old discussion again, but *officially* you need to change the disk controller chip (I haven't taken a note of the chip number, but you'll find it underneath the ACSI/SCSI interface board on the rear-right hand side of the motherboard. Just remove the small board's screw and unplug it from the multi-pin connector on the right hand side.

5) Officially from Atari, you need to replace the WD-1772 chip with an "AJAX" (I can't remember the numbers on that chip, but that's the nickname it has) which has been designed for the HD/ED modes. The WD-1772 was built to handle just the DD mode, but unofficially the WD1772-02-02 (not the suffix) has a higher tolerance than other WD-1772 versions, and many people here have reported it running fine in HD mode as well as DD mode.

6) If you want to add a "High desnity" option in addition to "Single sided" and "Double sided" format options when choosing to format a floppy disk from the TOS desktop, you need to flip up the number 7 DIP switch (you'll find an 8 switch DIP block, which is red in my machine) close to the TOS ROM/EPROMs in the front-right hand side area of the motherboard.

> In a another thread, somebody talks abaout a magic dip-switch to make
> everything work? Where is this?

I assume you mean the DIP switch I just mentioned. It has nothing to do with enabling or diabling HD floppy support. It just gives you an extra format option. By flipping the switch ON you will get that option in the format window even if you don't have a HD floppy drive, the correct PAL chip or anything else related to HD floppy support! Of course it won't format the floppy drive to HD standards ;-)

> Can anybody explain the function(s) of the jumpers located around the

> motherboard?

I think a few of these are explained in the "Chips'n chips X"
HYPertext file. It's a HUGE HYP file, and you probably need a 4
Mbyte machine to run it, but I've also read it using a couple of
free Atari ST emulators in Windows ("GEMulator 2000" and "STEem
engine", the latter being the best one in my opinion).
I have the file here, so if it can't be found elsewhere I'll see
about uploading it (not sure if I have enough disk space, but
we'll see).

Hope this clears up a few things.
I would still like to get this information confirmed though.

I've just made a photo available, showing the location of the
various ICs concerning the HD floppy drive and the other Mega STe
stuff that I've discussed in different threads lately.

Take a look here: http://home.c2i.net/w-460389/mste_overview.jpg

Maybe, just maybe, nobody wants your 8-bit fossils. Doh!

You sure don't see this crap on Craigslist.

Hi Hallward

Thanks! You are an exhaustive source of information. I will start
looking inside tonight and try to confirm your findings.

I have MagiC 6 and that came with an English manual (from Atari Workshop), however the manual is only really new users introduction and odens't go into great depths like the older Atari software manuals used to in the 80's, but there is loads of info out there on the net for you as well.

There is no demo version available, and the software is still commercial so you can't download it legally. If you want to give it a try without spending serious money, I suggest you look around for an older second hand version and if you like it, pay for the current version update.

I have a new version.What I would like is a V4 Disk 2 so I can use it with
Gemulator. Later versions don't seem to work :-(

Midway, actually.

I had the opporunity to work at Atari Games in Milpitas back in 1998,
but decided to stay with my soon-to-be-wife. (Ironically, we landed down
in this area (SF south bay / peninsula) a few years later, anyway :^))

There was a slashdot article a coupla years ago when the Midway (Atari)
offices finally closed in Milpitas. I recognized a lot of the stuff
in the photos. (Posters on the wall, etc.)

Hi,

I'm currently in the process of making a CD-ROM based interactive tv show.
Basically here's the idea:

1. The magazine will come out monthly / bi-monthly or quarterly (depending
on interest)
2. Each CD-ROM will contain well over an hour of video footage, along with
text and software content. It will all be connected by a sleek interface for
easy navigation.
3. The CD-ROM will cover retro news, events, interviews, latest games (for

retro computers/consoles) and a lot more. Covering computers and consoles
such as the Commodore 64, Sinclair Spectrum, Atari ST, Amiga, MSX and game
consoles from Sega, Nintendo and others.
4. It will sell for about 5 USD (thats's about 4 Euro and about 2.70
Sterling) with free postage throughout the world.
5. Depending on the success of the CD-ROM, supporters will be paid for video
footage etc, failing that they will be offered free issues of the CD-ROM.

Here is what I want to know................ WHO'S INTERESTED? As in, who
would purchase such a CD-ROM, if this interests you or if you want to be
involved then email us at john(at)digi-alt.net

John

On Mon, 6 Jun 2005 11:39:33 +0100, "exxos" <exxos@home.co.uk> wrote:

Here's the history of Atari Games Corp. I put together (and just recently updated), available at http://home.centurytel.net/hunmanik/atariholdings.html

What I just figured out is that, legally anyway, Midway Games West still exists, and is still the owner of all the Atari Games Corp. rights.

Just like Atari Interactive is the legal unit within today's Atari, Inc. that owns all the old Atari Corp. rights.

Anyway:

Atari Coin-Operated Games (Atari Games Corp.)

1985
February 6: Namco, Ltd. (of Japan) purchased the Atari Coin-Operated Games division of Atari Games, Inc. from Warner Communications, Inc. Upon the purchase, Namco renamed the division Atari Games Corp., and made Atari Games Corp. a division of Namco America, Inc. The transaction included the "Atari" name and "Fuji" logo, along with intangible property rights (patents, trademarks, and copyrights) owned by Atari Games, Inc. in conjunction with its coin-operated video game business, all for exclusive use in the area of coin-operated video games. (Upon the sale, the Atari Games, Inc. unit of Warner Communications was renamed Atari Holdings, Inc.)

Spring: Hide Nakajima became president of Atari Games.

1986
(after July 3): A group of Atari Games employees purchased Namco America's controlling interest in the company. Atari Games became independent of any corporate parent. (Both Namco America and Warner Communications remained major investors.) [NOTE- MC has not been able to document this transaction directly.] Hide Nakajima remained president of Atari Games.

1987
September 1: Atari Games purchased all assets of Barrel of Fun, Inc., owner/operator of the "Barrel of Fun" and "2001 Entertainment Center" chains

of video game arcades, located primarily in six southeastern U.S. states. The acquired arcade operations would now be run by a new wholly-owned subsidiary of Atari Games, named Atari Operations, Inc.

December: Atari Games created Tengen, Inc., a wholly-owned subsidiary, for the purpose of marketing games for home video game systems (where exclusive use of the Atari brand was owned by Atari Corp.).

1990
June 26: Atari Games announced that it would repurchase the entire 43.8% share of the company held by one of its two largest shareholders, Namco America. In return, Namco received ownership of Atari Games' Atari Operations subsidiary, which operated more than 40 video game arcades in the Western and Southeastern U.S. SEE BELOW.

While there was no majority shareholder in Atari Games before the transaction, the majority shareholder after the transaction became Warner Communications, itself now a unit of Time Warner, Inc.

1992
September: Hide Nakajima was still president of Atari Games.

1993
December 31: The Warner Communications unit of Time Warner reported owning 79% of Atari Games.

1994
April 11: Time Warner Interactive Group, Atari Games and Tengen announced plans to integrate their operations and to utilize the common name, Time Warner Interactive. Use of the Atari Games brand was discontinued, though the Atari Games business unit remained distinct.

December 31: The Warner Communications unit of Time Warner reported owning 100% of Atari Games.

1996
March 29: Midway Interactive, Inc., a subsidiary of Midway Games, Inc. (itself a subsidiary of WMS Industries, Inc.) acquired the entire 100% of Atari Games owned by the Warner Communications unit of Time Warner. Atari Games became a division of Midway Games, and use of the Atari Games brand resumed.

1998
April 6: WMS Industries spun off to shareholders its entire stake of Midway Games, making Midway Games an independent entity. Atari Games remained a division of Midway Games.

1999
Atari Games released San Francisco Rush 2049. This turned out to be the last coin-operated arcade game sporting the Atari Games name and logo.

2000
January: Atari Games was renamed Midway Games West, Inc., and games produced by the group would now sport the Midway Games brand.

2001
June 22: Midway Games announced its exit from the coin-operated arcade video game market; it would now develop software exclusively for home systems. The Midway Games West division remained an in-house game development unit within Midway Games.

October 1: Happ Controls acquired assets of Midway Amusement Games' Midway and Atari Games coin-operated videogame parts and service business, and assumed warranty repair operations and all warranty obligations. See http://www.happcontrols.com/midway/midway.htm

2003
February 7: The Midway Games West development studio was shut down, but it remained a legal entity wholly-owned by Midway Games.

TODAY: The Atari copyrights/trademarks/patents secured by Atari Games Corp. from Warner Communications in 1985, along with all Atari Games Corp. and Midway Games West properties created since 1985, are owned by the Midway Games West unit of Midway Games. Midway Games, Inc. is based in Chicago, Illinois, USA: http://www.midway.com/

```

Atari now is just a brand logo used by a games comapny that is themselves very small. There is no way I can see that they are going to build a new hardware, they don't have anything like the money or experience to do it. Besides it wouldn't be wise from a business point of view. I think in the future they will wind up making games mostly for the mobile market where the overheads involved in making games is less, plus they can use their old titles. People won't Q up to play PacMan on the PSP or Xbox 360, but they won't mind paying a few quid to download it to their phone.

I think there may be quite a big market for simple, retro games on the next gen consoles. All 3 consoles are going to be more on-line centric, with some games available for download.

If microtransactions can be made to work then the market for simple, cheap retrogames could be huge - if they can get the cost right there might be a lot of money to made.

My apologies to anyone who wasted their time reading my post, I am not really stupid, it just looks like it. I now know drones in fact SHOULD be 490 tons. It's been so long, I had forgotten.

To anyone who wants to play Deuteros, some advice: use the atari st emulator called Steem, use the disk images from pompey pirates or d-bug, www.the-underdogs.org has them.

Don't hesitate it truly is a great game. Don't be put off by the lack of information in the manual, that's intentional, you will truly be surprised by this game. It's big, it's difficult, it's brilliant.

Didn't I hear at one point that Infogrammes officially changed their
name to Atari? So in that respect, it isn't a subsidy, but the
company's official name. It's still only a surface change, though.
There is no support for past Atari products at all. Just a means to use
past Atari ideas and better name recognition to make PC games.

Very interesting indeed. I have been using GfaBasic with ErgoPro+Bastard under MiNT/N.AES which is a really nice setup. But the original GfaBasic editor simply wasn't made for Multitasking. It's a little miracle that with ErgoPro/Bastard I could use it under MiNT. But it always felt dirty and unsafe.

If I had more time I would use the new editor frequently. I haven't programmed anything in GfaBasic for a long time. This could be a good reason to try to make something nice with it again. I have still some unfinished projects on Falcon's harddisk ...

Sorry. He will have to buy it like I did. Suggest that he try Mint. That is
free and downloadable off of the NET.

```

Hi all!

I am owner of an Atari Mega STE (currently in the attic, but otherwise in MiNT condition.)

I am considering bringing it back to life, doing what it initially was purchased for and supposed to do: MIDI sequencing.

In the old days I had an acc named "harlequin" (sp?), with calender, textedit, calc and term. It was version 2 and the calender part is now (after Y2K) partially dysfunctional.

I recall that a version 3 was released, but I never bothered to get it (kicks self in ass!)

Do anybody here know if the calender in Harlequin 3 is fully functional
after Y2K? And if so; where to get it?

mvh // Jens M Andreasen

The 68K chip in the Atari ST is thick enough to go anywhere in our solar
system without noticing. Do not attemt to land on Europa though!

:) :)

Wasnt that a Hisoft App? If so, its probably still available for
purchase at one or more of the existing Atari dealers.

Could try Nick at 1632systems.co.uk

Coda.

Yes, now that you say say it, I recall Harlequin to be distributed by HiSoft. Though the program itself was developed by a danish company named ... (ehrmm??)

> If so, its probably still available for purchase at one or more of the
> existing Atari dealers.

Purchase? Well yes ... uhmm ... If it's really, really cheap! And if it is functional after Y2K.

I have another antique up in the attic (an Intel PII 400) that I could set up with Linux and a sequencer and a calendar. Just thought I would save that one for a giveaway to somebody in need of machine that can do realtime softsynthesis.

Hmmm ... decicions, decisions ...

>
> Could try Nick at 1632systems.co.uk

OK! I'll ask. Maybe he will agree with a one to one exchange for one of my own applications residing here:

    http://mx44.linux.dk

(it's a softsynth)

(and Nick probably won't agree.)

Understand me correctly now: I am not into stealing intellectual property,
just thought that it would have have been elegant to utilize a piece of
outdated equipment, instead of just letting it sit, silently bored to
death in the attic, along with the Tandberg all valve taperecorder and
other hard-to-throw-away-items.
:)

I was working on a universal MIDI System Exclusive dump utility with a
modern interface and a lot of bells and whistles. Color icons, resolution
independent, online help, drag&drop, and, unlike many old Atari ST MIDI
apps, multitasking friendly. Never quite finished it.

And I was dreaming of a nice GEM interface for SoX, the audio
processing/converting utility that is available for SpareMiNT.
In general, many of those nice commandline apps from the SpareMiNT archive
could use a nice GEM frontend.

I have made some test binaries using various variable types byte, word, and long and tried $S|, $S&, $S%, in my tests. The byte setting always generates a binary that is identical to the word setting. Only thing I can conclude is $S| = $S& from my tests. I have even compared the output in TT digger. Strange.

Anyone else want to verify my tests ? In case I have done something wrong.
;-)

Anyone,

First off I have my Falcon060 Networked to my Cable Modem via a Linksys 4 port Router. I am using MagicNet with the Iconnect port. I am also using a EtherNEC for this connection to the Router. My question pertains to another Falcon that I have that does not have a CT60. It was accellerated and scores just as good if not better in most benchmarks than a STOCK TT030. I want to network this Falcon to my CT60'ed Falcon. Would the LAN port work?? If so, where do I get the Cables and what software should I use?? Does MagicNET work for this?? With this type of connection will that Falcon be able to use the Internet at all or will I just be able to transfer files?? Also, I have a 1040STf that I want to network to my Falcon060. Reason, I have a MegaFile 60 that is pretty much full and I need to transfer the stuff to my Falcon060 to burn the stuff to a CD for a backup. Will MIDI cables work for this job?? What software will I need?? MagicNet, STING is actually all ready setup on the 1040STf for connection through a router but I do not have an extra EtherNEC. What about FTP software?? I use Fiffi on my Falcon060 and plan on using that on my other Falcon but that will probably not work on a 1040STf. So what should I use for transfering these files over to my Falcon060 If there are any good networking web pages out there that will help with these type of connections with the type of software that I have please let me know. NOW granted, I know these type of connections will probably not be the fastest connection possible. But it sure beats using FLOPPY's!!!

Thanks,
--

Funnily enough during the 80's/90's some  rocket launches were tracked by
Amiga hardware - not sure if this is still the case ;-)

I agree with you Jens, I was just pointing out that I think that Hisoft stuff is still being sold by Hisoft or whoever else owns their assets now. In fact I bought some stuff off ebay directly from Hisoft only as much as two years ago, so maybe they are still trading.

Coda.

I would expect so..

> If so, where do I get the Cables and what software should I use?? Does MagicNET

I think you would just be able to transfer files. I don;t think there is a routing module for MagicNET
Not sure of Max Speed. You will need a "null modem" cable. I think the MAC cable is OK.

> Also, I
> have a 1040STf that I want to network to my Falcon060. Reason, I have a

Not sure if there is still a copy of MIDI net. I expect MIDI is hardwired at 32k Baud.
Thats very slow. You might want to try PARCP http://joy.sophics.cz/parcp/

> What software will I need?? MagicNet, STING is actually all ready

I use an FTP server. Can;t remember where I got it from GAPFTP perhaps. Try google for it..

I'm sure that was down to the PC CPU bug of where "1" was like
"0.9999999999998", probably miscalculated the fule intake.....

HiSoft is alive. I approached them 2 years ago to see if they could supply
me with a set of disk-images for Lattice-C, which I bought from them
and have a perfectly valid licence number for ...

No Cigar :(

The funny thing is that a modern Gnu C Compiler for 68K will do a better
job, and once you realize how to use "strip" after compiling, the binaries
are about the same size. Now go figure?

There are some good news though :)

I bought MidiDraw from Intelligent Music, a program that turns your mouse into some kind of, how to say, an electro-harp? I was pretty annoyed when I realized it was incompatible with the spanking new Mega STE ... The good news is that Intelligent Music have recently released all their bright stuff (and even their not so bright stuff, dispite the name) into public domain.

Programs like MidiDraw and its well working successor Diabolo do not function as intended by the author under PC emulution. This is related to how mouse-interrupts are handled on the ST. Basically you get one interrupt for every pixel on the ST, wheras on a PC you get an interrupt once in a while telling you how far the pointer have moved. Uhmm, no ... you can't really play MIDI with mouse gestures using the way a PC prefer doing mouse handling. And it will not help to run under Linux and hack the mouse-driver, because the information is simply not there. It's one of those obscure hardware thingies.

Xref: g2news1.google.com comp.sys.atari.st:6296

I've finally gotten round to opening up my (early model) Mega STe in order to find out what needs to be done and how. I've only been able to find small bits of information here and there (searching through "google groups" as well as the "Chips 'n'chips

X" HYPertext file and other documentation. Unfortunately it's mostly in German which I'm not very good at (at least not technical German), so I have some questions:

1) Adding a co-processor.
My machine has an empty PLCC type co-processor socket (UB-2, found close to the 68000 processor) as well as an empty 20 pin DIL socket (UB-1, found underneath the left flat-cables that connects from the motherboard to the VME connector) which I've figured out is for a PAL chip needed for the 68881 (and/or 68882?). Is this all that's needed?
It looks like (according to some documentation in the German "Chips'n'Chips X" HYP file) that one or several wires may have to be soldered between some chip pins, but I'm not sure.
I know that there isn't much software out there which supports it, but I'm hoping that "X-alyzer" (a DX-7 editor/librarian from C-Lab) which does some pretty processor-intensive stuff will take advantage of it -I guess there's really no way to find out if it will or not other than to actually try it out (C-Lab is long gone, so there's no point in trying to ask them).

2) The ACSI host-adapter.
My SCSI drive works fine with it, but someone else with a Mega STe wants to add a new drive and I told him there were some specifics to the Mega STe which I can't quite remember.
I seem to recall something about having to terminate or NOT having to terminate the drive connected to it, and only being able to connect one SCSI device to it or something. Can someone please fill me in?

3) DMA problems.
Some Mega STe machines had a problem with crackling audio etc. I haven't really checked as I haven't used my machine much for audio, but if I have a faulty chip I'd like to fix it anyway.
I had a hard time searching for the specifics on the web, but one posting pointed me in what I hope is the right direction, as I read the said (PLCC shaped) chip is found in location U-502 (to the left of the memory SIMMs). Mine is marked as follows:

300588-001
(c)Atari 1988
-19
S9006

From what I read, the chip I have is one of the good, but old GST shifter chips. Can someone confirm this, or do I need to change it? If so, what number should I replace it with?

4) High-density floppy drive
My machine is one of the older ones which didn't come with a HD disk drive, but I've since added one (a modified Sony MPF-520-1 which works great in DD mode), but alas the Mega STe hardware

doesn't support it out of the box. I believe I need to change a pre-programmed PAL chip that came with newer Mega STe machines. I am however unsure of exactly which chip I'm looking for. There's some conflicting information going around. The said HYP manual seems to mention UA-02 (which is found just in front of the power supply), but a news posting mentions UA-10 which I found underneath the power supply (you have to remove it to gain access), close to the where the rear connectors are found. But I think UA-02 is the right one as I've seen that reference several places.

My UA-02 chip is a 20L8 marked as follows: C-301901-001

If I'm not mistaken, it needs to be replaced with another 20L8 marked: C-301901-002. Can anyone confirm this?

Trying to figure out the German information about this issue in "Chips'n'chips X" it also seems like I have to solder a wire between the mentioned PAL and the 68000 processor as follows:

UA-02 (20L8 PAL chip)	U-7 (68000 processor)
Pin 32	Pin 19

Can anyone confirm this?

Also, does anyone have a pinout of the 68000 PLCC chip as it's not that obvious where pin 1 is, and in which direction the numbering continues.

5) DIP switch settings

There's an 8 pin DIP switch block on the front, right hand side of the motherboard, close to the two TOS EPROMs. It's marked S-701. According to "Chips'n'chips X", pins 1-6 are unused so it doesn't matter how they're set, but pin 7 has to do with turning on or off the "High density" format option in the TOS desktop formatter. I know this from having messed around with an STe, and it has nothing to do with actually being able to read/write/format HD floppies, it just accesses an extra option in TOS 2.06 (but doesn't really make sense to turn this option on unless you actually have a fully working HD disk drive).

But I'm getting sidetracked....

I was wondering about the next switch (switch 8) which is for turning on/off "DMA sound hardware". What on earth is this?

I believe that's about it for now. Anything else I should take a look at now that I've opened up the Mega STe?

1) Not sure

2) Termination must be OFF and 1 drive only on a reasonably short cable. Modifications can be made to the host adapter to allow 2 drives though.

3) Not sure, I know mine doesnt have the problem. (If it aint broke dont fix it?)

4&5) http://www.best-electronics-ca.com/custom-i.htm look for "C301901".
Your WD1772 should be OK of its the 02-02 model, either that or you can use an Ajax ($ OUCH). Some early MegaSTe's use the old WD1772 and need this chip changing out. Also, I think that you need to be running Tos 2.06, Im not sure if 2.05 has the option to format HD disks. Leave the dip-switch 7 ON. It doesnt matter if your hardware cant do it yet.
Don't know about the dip#8, never played with it.

Coda.

I recently bought Lattice C also, mainly because of the number of huge manuals that help me when im C coding (its not my first language). If I knew where to get Gnu C information to the detail that the Lattice manuals contain, I would be using it already.

well hello guys,hows things?
i may be able to assist :
i have afew atari "chips" ...various ones but never the less all good.
consists of :
----------------------------------
3 mmu
------------------------------------
2 glue
-----------------------------------
2 floppy control(1 is 02-02 wd1772-ph for high dens format)
-------------------------------------------
2 dma
----------------------------------------------
2 st/mega video shifter
--------------------------------
and 4    256 k simms frrom old ste upgrade.
-----------------------------------------------------
i shouldn't really target the forum for selling or buying ,
but this is definiently atari stuff.

so if interested email..

Hi all,

Does anyone of you know how to get in touch with Danny from Electronic
Cow?
It seems like the email addresses listed at his website
(http://www.cow-net.co.uk/) does not work, appearantly due to a flooded
inbox.
I was in contact with Danny regarding Electronic Cow sources for The
Orphaned Projects Page a few years from now, but we never got things
settled.

Any help would be appreciated.

Thanks!

Regards,

/Joakim

He did have one or more the last time I saw him.

And I can confirm that the calendar in Harly III works OK post 2000, though in common with all HiSoft applications the first digit of the year is displayed incorrectly, e.g. as '11/6/:5' (if you select D/M/Y - of course you have a M/D/Y option). And to ensure longer-term use: I have checked and after 2009 it becomes '11/6/;0' for 2010 :-) This only affects the fileselector, dialog boxes and the date in the Manager listing - the date is shown correctly as '11 June 2005' in its top panel (and the main dialog). I assume that your system clock is 2000-compliant, but in any case you can set any system date from 1980 up to 2079 in Harlekin's main dialog by clicking on the date and manipulating the arrows in the dialog this opens.

Regards, /Peter/

> though.

Any *English* instructions on how to do this anywhere?
Not that I have any need for an additional drive, but who knows
later on....

OK: termination OFF, and SCSI ID 0 I assume? (I guess I can check
my existing drive for that). And parity is to be turned off if
the drive has that option as well, right?

> 3) Not sure, I know mine doesnt have the problem. (If it aint broke
> dont fix it?)

Too true, or... "if it ain't broke, don't break it" which is
often the case when you mess around with electronics ;-)

> 4&5) http://www.best-electronics-ca.com/custom-i.htm look for
> "C301901".

So you can indeed confirm that it is the UA-2 chip then?
Because as I said I found the one here to be marked as above, but
with the "-001" suffix.
Do you have HD disk drive support, and do you know what that chip
is marked as inside your machine?
I believe the UA-2 chip to look for is the one with the "-002"
suffix, but it would be nice to get this confirmed before I start
looking around for it, or order it from somewhere.

> Your WD1772 should be OK of its the 02-02 model, either that or you can
> use an Ajax ($ OUCH).

I already have one. Bought it years ago when I was worried that it would disappear from the market.

> Some early MegaSTe's use the old WD1772 and need
> this chip changing out.

There's been discussions about this throughout the years, but "02-02" suffix or not, I'm going to stick the AJAX in there since I bought one for that purpose (actually I bought it for my STe, but now that I have a Mega STe the choice is easy).

> Also, I think that you need to be running Tos
> 2.06,

Yup, already installed from when I bought it.

> Im not sure if 2.05 has the option to format HD disks. Leave the
> dip-switch 7 ON. It doesnt matter if your hardware cant do it yet.
> Don't know about the dip#8, never played with it.

It was switched off, probably a factory default setting for machines without HD disk drive support, but I've switched it on now. However, I've found the built-in formatting option in TOS to be crap. I'd rather use Hcopy or something which does MSDOS correctly to begin with.

Not sure what to do about the number 8 switch. It's currently turned off.

Hallo David!

DW>I think you would just be able to transfer files. I don;t think there
DW>is a routing module for MagicNET

You're wrong. There is such a module, but not in the rather outdated version available from Vassilis' homepage.

It's also possible to map drives to the other machine, but somehow limited. I was never able to use it as all of my drive letters are occupied ;-)

DW>Not sure if there is still a copy of MIDI net. I expect MIDI is
DW>hardwired at 32k Baud.

MagiCNet is also capable of working with the MIDI connection. It's not very fast, but still alomost twice as fast as the standard serial port of a ST.
For transferring files, I'd setup a ftp server on one machine and transfer the files with a ftp client from the other machine. Or http server on the ST and wget on the falcon. This may run overnight, so speed is not an issue anyway.

Before I had the EtherNec I used PARCP, made my own cable, very quick
registration is cheap...
Works like FTP...

http://atari4ever.free.fr/hardware/drives.html - look for SCSIMSTE.ZIP

I think whatever ID you set the drive to, its still 0, but I havent tried it myself. I did try a SCSI to IDE convertor on the Stacy (same host adapter as megaste) and it worked great with a 10gb IDE drive. No parity is used, but again you *can* modify the host adapter to do parity.

I havent got the time to open my machine tonight, but if UA02 has C301901-001 or C301901-002 written on it, that thats your baby. Being a PAL it may have a sticker on it, or it may be printed I cant remember.

I do have a HD drive in my MegaSTe. I had an Ajax on standby so I installed that when I got the HD drive assembly. I was curious so I put the 02-02 back in and it still worked fine, so I left it at that. As I have a working Falcon and TT, I am keeping the Ajax in the draw as a spare.

Hi all,

Some people have been asking me for information and pics of the
EtherNEC and Eiffel. I have put up a little page to have pictures,
prices and hopefully soon a FAQ or a forum for intallation hints and
tips for those devices as well as some other hardware stuff I'm
messing around with.

I apologize in advance for the large picture size and my crappy
camera. If you load the page, go get a cup of coffee and a sandwich
and come in a little bit. I will try to reduce them soon.

Heres the page:
http://fujiman.no-ip.com

If you have any questions, feel free to email me at
fujiman@(nospam)netzero.net.

Thanks
Rory

JagFest UK 2005

This years JagFest UK will be held on the 22nd and 23rd of October at the Medway Manor Hotel, Rochester, Kent, England.

I have been informed by Nick that The Hotel is under new management and that while this has resulted in a small cost increase the rooms are clean, painted and designed as function rooms and so we have plenty of space and tables.
The cost for staying overnight is �30 (including breakfast) per person per night, based on sharing a twin room as usual.

I am sure some of you have been awaiting this announcement for a while, life (and for some new life) along with the search for an alternate location has delayed proceedings a little but hopefully we are back on track now. For the moment there are a couple of minor changes from last year....

1)
Anyone bringing equipment must bring their own display (TV/Monitor). I know this will restrict some people from bringing equipment with them, but what's the point of doing so if there are no available displays to connect it to.

2)
As there are usually no Sunday Day visitors the tournaments for Sunday will start earlier than last year, exact timings are yet to be decided but don't be surprised to see a 9am start, although there may be scope for any early day visitors to fill any remaining slots.

Speaking of tournaments, the set-up will be the same as last year with up to two running simultaneously on both days so if anyone is considering running a tournament PM me with details at either the JagFest BBS or Atari Age.

Details of the booking arrangements and the cost of weekend passes/day tickets will be announced once the website is updated, keep an eye out for these and other announcements on the JagFest BBS at http://www.jagfest.org.uk/ and the Jaguar forum on Atari Age at www.atariage.com

OK, so for a stock, unmodified Mega STe, if for example you
install a new SCSI drive you should set it as follows:

a) SCSI termination *OFF* !!!!
b) SCSI ID 0
c) parity OFF

Yup, here's a picture I've taken of it:
http://home.c2i.net/w-460389/PAL_floppy_Mste.jpg
It's got the "-001" suffix.

> I do have a HD drive in my MegaSTe. I had an Ajax on standby so I

Good to know.
I learnt something interesting from an electronics related
newsgroup today. It is indeed possible to copy PAL chips, unless
they're copy protected. Since spare parts for our machines are
hard to come by these days and will one day become totally
extinct, it would be an idea for someone with the proper
equipment to read the data from these chips so that new copies
can be made for other Atari users if needed.
I don't know about the copyright implications here, but since
Atari Mega STe machines are no longer produced or sold, and Atari
in its original form isn't around anymore either, surely nobody
can suffer from some enthusiasts taking steps to ensure the
survival of their machines?

Thanks, but I already downloaded those schematics a while ago, so
they're safely here on a CD-R of mine :-)

Regarding the GST-shifter (location U-502 in the Mega STe) which
I've read is the cause of DMA problems discussed in many a
news-thread... here's a photo of mine (C300588-001):
http://home.c2i.net/w-460389/megaste_GSTshifter.jpg

Can anyone confirm if this particular chip is the malfunctioning
one, or the working one?
If not, how can I test it with software to find out?
I'm not sure how audio is supposed to sound on a Mega STe. We're
not exactly talking state of the art audio quality here
after all ;-)

Good morrow to you all!

I am pleased to announce that I have been working on a new Atari ST
STinG-based "Citadel"-type BBS. It is based on the original "Inner
Sanctum"/STadel source code, but I've pretty much torn it down and
completely re-worked the insides. The software will accept up to 24
Telnet concurrent connections through STinG, and will work best with
an ethernet static IP connection. It will work on any model ST, but
it requires 4MB RAM and at least 10 MB hard drive space.

The software is coming along smoothly: user accounts, rooms, and the
message base are all working and just require some stress-testing to
ensure their structures are solid. I'm currently hoping for an

August 1 launch date, but a beta version of the software will be up and available sometime before then.

For more information and updated progress, hit the web site at http://www.coldwinterknights.net

Having opened up my Mega STe, seeing what needs upgrading or not, I noticed the empty co-processor socket (UB-4) and the empty co-processor GAL socket (UB-1), which has made me wonder if I should get a 68881.

I noticed that Best electronics has the 68881 (http://www.best-electronics-ca.com/custom-i.htm) but for a price! US$ 50 !!!!

Is this chip really that expensive, or is it because it's hard to find these days? As fas as I know, it's a standard chip made by Motorola, and not a custom chip for the Mega STe, so it should be available from other sources as well, but where?

Also, I've heard mention of the 68882 in Atari related discussions, confusing me a bit: is the 68882 just another, faster version of the 68881, which is possibly easier to find than the 68881, or have I misunderstood?
Should I look for a 68881 or a 68882 for my Mega STe?

> ----------------------------------------------------
> Pin 32                       Pin 19

Oops! My mistake.
The pin numbers are supposed to be opposite, so this would be the
correct setup:

  UA-02 (20L8 PAL chip)        U-7 (68000 processor)
  ----------------------------------------------------
  Pin 19                       Pin 32

I would still like to have all of this verified though. Anyone
reading this who's upgraded an old model Mega STe to allow for HD
disk drive support?

In co-processor mode in a TT or Falcon the 68882 and 68881 are
identical apart from speed, but in memory-mapped mode as in the MSTe
they are not. Programs written in Pure C or Pure Pascal which try to
use the fpu will hang on an MSTe with 68882 because the 68000 waits
forever for a response which the 68882 is not going to send. However
such programs can be patched to make them work with a 68882.

It is possible to write code which will work on both chips. Lattice C programs do.

Hi NG

My original disk containing Emagic�s Logic v2.5 for Atari is broken - and the old Conner harddisk in my STacy is broken too!

I have scorched 100�s of disks to find a security copy, but "no dice". I have contacted Emagic (Apple) who does not support Atari platform anylonger (No surprise!)

Can any kind regular reader of this group please pack the content of the original program disk and send it to fedder@webhiker.dk, as i am trying to recapture all the songs we did back in the 80�s and 90�s?

Needlees to say i have the original LOG3 key!

TIA

Meanwhile I have read the Patrice Mandin's aranym doc, but did not
understand the chapter about hard disk images completely.

> Then download EmuTOS and the AFROS disk image (or even the live CD,
> which will boot directly into ARAnyM).

Yes, I did so and now I want to replace EmuTOS with TOS404.

> Changing to TOS404 (if you already own a copy) later is really simple.

I don't get the trick with TOS 404. It does not recognize the hard disk
image file from afros.zip. Must I create an image file with aranym and
then format it? I wasn't able to format the file with Atari's utility AHDI
6 (system function "format track" doesn't work with aranym). What is to do
now? Can anyone send me an image file as *.zip with 10 .. 20 MB size that
is formatted as C: in Atari compatible way? Please help!
To be correct I do not "own" TOS 404. I have downloaded it
from the WWW page with the Atari system images that is linked to from the
aranym homepage. This doesn't appear as a betrayal to me because I don't
know anyone who sells TOS 404.

>>If aranym is not sufficient for me, I will install MagicMac in the
>>Basilisk environment to use Atari programs on my Linux PC. The
>>installation of Basilisk II and MacOS 7.6 was comparatively simple with
>>the excellent setup program.
> Please, go ahead. If you already own MagicMac and its speed and features
> cover your needs, why not use it?

I own MagicMac but gave up the idea with Basilisk because I'm not able to
print with it.

regards, Ludwig

Thanks for clearing that up.
So I should really get hold of a 68881 then.
There's a particular program I have which I'm wondering works
better with math co-processor installed. It's called "X-alyzer"
by C-Lab (later Emagic, now Apple) and is a Yamaha DX-7
synthesizer editor. I don't think the program is very widespread,
so in case nobody here knows -is there a way to test if a certain

program utilizes the co-processor?
Alternatively, I'll probably just have to take my chances and
install a 68881/accompanying PAL chip and see what happens.

Are 68881 chips hard to find? I guess I could look for a used
one, but then I'd need the exact specs. Apart from being a PLCC
shaped 68 pin chip, what else should I keep in mind?

No problem. A bit off-topic from the rest of the Emagic software
I've uploaded (I run the Notator mailing list: www.notator.org),
but since I have Notator Logic myself and had a hard time finding
the final version I've made it available to anyone else by

placing it here:

ftp://gem.win.co.nz/hall/midi/sequencer/logic/

PS. Read the text file there first. It'll tell you what you need to download.

Getting back to the memory expansion discussions (I can't remember which threads though)....

I really want to put in more than 4 Mbytes of RAM in my Mega STe, and I believe I read that several people in this group were involved in something like that. Egon Spengler in this group is someone I was in touch with who almost had something working as far as I know, but unfortunately I lost touch with him (has anyone else heard from him lately?).

I know most memory expansion boards plug into the 68000 processor in some way, but I'm also looking into getting hold of an IDE board of some sort (so I can use a modern, quiet laptop 2.5" drive instead of continuing to use my old and noisy 3.5" SCSI drive), so adding a memory expansion board on top of that would probably prove to be difficult.

Is using the VME bus a viable option?

Anyway I'd like to hear from others who are interested in and/or are involved in designing/building something like this. I believe I'm not the only one looking for more memory than the maximum 4 Mbytes.

I beleive that the answer lies in the existing ST/e memory expansion projects that take a bog standard ST up to 10 or 14mb. No you will not be able to use the VME port. More likely that you will have to hand solder a SIMM socket to the CPU/Glue/DMA ICs, and add some logic of your own (or the machine will bus error if you try to address more than 4mb ram whether it exists or not)

As for the IDE drive, why not get yourself a SCSI to IDE convertor and use a quiet 3.5 IDE? I have done this in my TT, and it works perfectly.

Coda.

I think thats it, just a 68881 in a 68pin PLCC. Speed will not be important.

As far as working out if a program requires a copro - the only way I can think of other than reading the manual is to open the program with MonST and look for some FPU specific instructions, but this is probably a bit much for most people.

Coda.

OK.
For anyone else interested -the files will still be there and can be freely downloaded any time.

Note: these are NOT pirated copies of Notator Logic. I put them up there because you need the original Log-3 hardware dongle to be able to use it. You'll be wasting your time if you try to run the software without it.

START MAKING MONEY TODAY !!!!!!!!!!! COOOOOOOOOOOL !!!!!!!!!!
1. Make 800,000$ in 3months!! EASY!!!
Dear Friends: Greetings: I am a retired attorney. A few years ago a man came to me with a letter. He asked me to verify the fact that this was legal to do. I told him I would review it and get back to him. When I first read the letter my client brought me, I thought it was some "off-the-wall" idea to make money. A week and a half later we met in my office to discuss the issue. I told him the letter he originally brought me was not 100% legal. My client then asked me to alter it to make it perfectly legal. I asked him to make one small change in the letter. I was still curious about the letter, so he explained to me how it works. I thought it seemed like a long shot, so I decided against participating. But before my client left, I asked him to keep me updated on his results. About two months later, he called me to tell me he had received over $800,000 in cash. I didn't believe him, so he asked me to try this idea and find out for myself. I thought about it for a couple of days and decided I really didn't have anything to lose, so I asked him for a copy of the letters. I followed the instructions exactly, mailed 200 copies, and sure enough, the money started coming in! It arrived slowly at first, but coming. I kept a precise record of the earnings, and in the end, it totaled $978,493! I could hardly believe it. I met with my friend for lunch to find out exactly how it worked. He told me there are quite a few similar letters around, but this one is different because there are six names at the end of the letter, not five like some others. This fact alone results

in your name being in far more returns. The other fact was the help I gave him, making sure the whole thing was legal, since no one wants to take the risk of doing something illegal.

: By now you are surely curious to know what small changes to make. If you sent a letter like this one out, in order to be completely legal, you must actually sell something in order to receive a dollar in return. So when you send a dollar to each of the names on the list, you must include these words, "PLEASE PUT ME ON YOUR MAILING LIST" and include your name and address. This is the key to the program. The item you will receive for the dollar you sent to the six people below is the letter.

: At the time I first tried this idea, I was earning a good living as a lawyer. But everyone in the legal profession will tell you there is a lot of stress that comes with the job. I told myself if things worked out, I would retired from my practice and play golf. I decided to try the letter again, but this time I sent 500 copies. Three months later , I had totaled $2,341,178!

: Here are a few reasons a person might give for not trying this program: � Some people think they can never make a lot of money with anything this simple. � Some are afraid they will be ridiculed for trying � Some dream of large sums of money, but do nothing to actually achieve it. � Some are just plain lazy. � Some are afraid of losing their investment. They think this program is designed to beat them out of a few dollars.

: The system works if you will just try it. But you must follow the simple instructions exactly, and in less than three months, you will receive $800,000 GUARANTEED! Keep what you are doing to yourself for awhile. Many will tell you it won`t work and will try to talk you out of your dreams. Let them know of your success after it works.

: LETTERS FROM PARTICIPANTS IN THIS PROGRAM:

: My name is David Rhodes. In 1992 my car was repossessed and bill collectors were housing my. I was laid off and my unemployment ran out. In October of 1992, I received a letter telling me how to earn $800,000 anytime I wanted. Of course, I was skeptical. But because I was so desperate and virtually had nothing to lose, I gave it a try. In January 1993, my family and I went on a 10-day cruise. The next month I bought a brand new Mercedes with cash! I am currently building a home in Virginia and I will never have to work again. This money program really works perfectly every time. I have never failed to receive less than $500,000. This is a legitimate, money-making opportunity. It does not require you to sell anything or to come in contact with people. And , best of all, you only leave the house to mail the letters. If you have always believed that someday you would get the lucky break, then simply follow the instructions and make dreams come true.

: Larry McMahon, Norfolk, VA Six months ago, I received this letter and ignored it. Five more came within a period of time and I ignored them also. I was tempted, but I was convinced that they were just a Hoax. After three weeks of deliberating, I decided to give it a try (not expecting much). Two weeks went by and nothing happened. The fourth week was unbelievable! I cant say I received $800,000 but I received $400,000. For the first time in years, I am debt free. I am doing this again, only this time starting with 500 post. I strongly recommend that you follow the instructions exactly as outlined in this letter.

```
: INSTRUCTIONS
1. Immediately send $1.00 to each of the six people on the list at the
end of this letter. Wrap the dollar bill in a note saying " Please
add me to your mailing list" and include your name and address.
: 2. Copy this letter. You do not have to type it 200 times. Simply
place your cursor at the top of the page, hold it and drag it all the
way down to the end of the letter. Then click on "edit" and select
"copy". Now open up a notepad file on your computer and put the cursor
at the top of the page in the notepad, click on 'edit' and then select
'paste' it will copy the letter for you onto your computer.
: 3. Remove the name next to the #1 on the list and move the rest of
the names up one position (#2 becomes #1, #3 becomes #2, etc.....) Then
place your name in the #6 position. Then save it, make sure it is saved
as a txt. file.
: 4. When you have completed the instructions, take this letter and
then go to (Google,Yahoo,...) and type in (Making Money Massege
board,or post massege,...)and start posting your copy to 200 message
boards,or more this is only the minimum, you can post as much as you
like...The more copies you send the better the results. Keep a copy of
this letter so you can use it a second time. Post it out again in six
months, but Post it with the addresses you receive with each dollar. It
will work better the second time. NOTE: This service is 100% legal -
(Refer to title 18 section 1302 of the U.S. Postal & lottery laws)
: How does it work? When you send out 200 Posts, it is estimated that
at least 15 people will respond and send you a $1.00. ($15.00) Those 15
will Post 200 Posts each and 225 people send you $1.00 ($225.00) Those
225 people Post 200 Posts each and 3,375 people send you $1.00
($3,375.00) Those 3,375 post 200 posts each and 759,375 people send you
$1.00 ($759,375.00) At this point your name drops off the list, but so
far you have received $813,615.00. P.S. When your money begins to come
in, give the first 10% to charity with spirit and share a good fortune!
: important tip - Cover money by paper fully by which it can not been
seen in light , because postal employees do some cheat some times....ok

Hallvard,

I recently bought a 68882 co-processor for a Falcon project that me and Mark D had going on. He took this 68882 co-processor and boosted it from its stock rating of 33 mhz to a level of 50 mhz. This is felt in benchmarks such as zBench and Kronos. The result is substantial going from the stock setting of 16 mhz to 50 mhz. yielded quite an amazing difference. I hope to have benchmarks on the web of this falcon soon. But Mark D. also did some other amazing overclocking features. He took the Videl to 40 mhz and the CPU to 20 mhz. the DSP is clocked at 50 mhz and the FPU is clocked at 50 mhz for now. I have added on to this computer my Eclipse Graphic Card and I now am able to play a 128 kbit/sec MP3 with 40 percent average CPU load. 160 kbit/sec averages around 45 percent. Well worth the money I will be paying, for this improvement. But to answer your question. The 68882 is from what I have heard 2 to 4 times faster and is exactly the same as the 68881 in every way except for processing power. I personally would opt for the 68882, it should be easier to find and mine actually cost 16 dollars shipped to my house. I bought mine from a place called Vintage Fun World. the URL is http://www.vintagefunworld.com/default.asp I sent the guy a check on Saturday and had my 68882 on Thursday. I went to his web page and seen he does not have them listed under the Amiga or Atari ST anymore but you may wish to e-mail him. Also do a search on the web. I found that e-cost.com has them for around 22 dollars for a 68882 at 33 mhz. Remember the faster the speed of the FPU if you decided to overclock the FPU the more likely you would be successful at doing this with a higher clocked FPU from the factory. Generally you can go 2 to 2.5 times faster than the rated speed of the FPU. Visit this web page for speed up mods. http://www.atari.nvg.org goto hardware then under Falcon there is a FPU accelerator. I would not do this to a Mega STe unless someone here could verify that the modification would work on a Mega Ste.

Thanks,

--

My Falcon's 68882 is a 25mhz part, and is clocked at 66mhz.

Just to clear something up, your videl is not clocked at 40mhz, but you have added a 40mhz clock to it so that it can display at higher frequencys. There is a 25 (for VGA) and a 32 (for RGB) clock as standard, and the option to add an external clock (usually through the monitor port hence screenblaster et al), but it can instead be soldered directly to the Videl. Some people cut the 32mhz RGB clock and put a 40 or 50 there, and some people just add the clock to the aforementioned external input. Which way is yours done?

Coda.

Coda,
  I am not sure on that. I would have to ask Mark D to be sure on that. We got the Falcon modifications off from that web page I put on the previous post. http://www.atari.nvg.org click on hardware then there are links to a FPU, DSP, BUS/CPU accelerators as well as a screenblaster mod

they called it. All I know is that we used 2 40 mhz clocks and 2 50 mhz clocks. According to Mark he tested my 33 mhz at 64 mhz and 66 mhz and I believe the FPU oscillator got pretty HOT. Is this normal for this type of MOD?? What is acceptable temperature for such an FPU and more to the point what is acceptable temperature for the oscillator itself to run??

Thanks,

FPU instructions would suggest co-processor mode. In memory-mapped mode they appear in 68000 instructions as immediate data, so it's unlikely that a disassembler would find them. You need to check for references to the addresses of the 68881/2 registers.

Pure C checks for a memory-mapped fpu by grabbing the bus-error vector and trying to write to the fpu. If no bus error, it's there. This test doesn't distinguish between 68881 and 68882.

I shouldn't have said that the two chips are identical in co-processor mode. For instance, they dump different stuff to the stack when interrupted but this affects only people doing hairy things in assembly language.

I have a 68882 in my MSTe and haven't met any insuperable problems.
For example, C libraries compiled with Lattice for HighWire work.

Xref: g2news1.google.com comp.sys.atari.st:6336

I just picked up a lot of Seagate Baracudda 4.2 Gig Hard Drives.

I had intended to use this on my Falcons for D2D recording and etc.

Looking at the connection on these drives, they have a 68 pin Female
connector similar to the SCSI Port on the Falcon.

Of course the Falcon has a 50 pin SCSI connector.

My Question is, Are there ready to use cables I can get to directly
connect
these drives to my Falcon?

And are there cables I can get to daisy chain at least 2 maybe 3 of
these drives
and then connect them to the Falcon.

When I bought these, I was under the impression they were 50 pin, but
actually they
are 68 pin Female. Connector looks just like the Falcon except for the
extra female
connectors.

I normal use actual 50pin scsi drives with ribbion cables to daisy
chain.

Anyone had any experience with these 68 pin SCSI drives?

If cables are not available, Is there a device to connect to the drives
to make them
50 pin compatible?

I though I'd ask here first to see if anyone has experience with these
types of drives
before going somewhere else. I got a good deal on these and would be
worth the
extra cables or etc if they will work correctly.

There is a 50-68 pin converter you can buy, it's actually not a big deal.

Thanks for the Info.

I thought there should be something available for these.

I believe these are SCSI III drives, IIRC.

I really could use a case or two already setup to handle these types of
drives. Anyone have one or more for sale?

If not, I'll check other sources...

I have 10 of these drives, not sure I can use them all.
I will be using at least 6 of em on Falcons.

Will these also work with a ICD Link 2 with an adapter?

My Mega STe could use one inside, Anyone know if it will work on the
MegaSTe with stock MegaSTE hard drive setup, If I get a adapter or does
the
MegaSTe require a different type of internal hard drive?

Also, a good source for the 50-68 pin adapter would help as I will
probably
need at least 10 of em.

Got a question about hard drives.

If I had a hard drive that came from a Windoze machine or other computer
using
a differnet OS other than Atari OS's.

Is there any way possible to read any data on the drives before
partitioning them on
a Falcon?

I have various PC hardware cards such as FalconSpeed and a Vortex 386
board in
my MegaSTe. Although I know the partition limits are smaller using
these.

Anyone tried to do this?

Need a few good 68882 FPUs for a few Falcons.

I have the 16mhz ones, need 33mhz or higher.

Also, would a 68882 FPU 16mhz out of a Falcon work well in
a MegaSTE? Or should I get a faster one?

Also need a Math Co-processor for a ATonce 386SX board in my
MegaSTe. Anyone have a suitable one?

Also still in the market for broken Falcons and related hardware
and upgrades.

Also looking for external CDROM cases with/without the CDROM drive.

Also need a SpartaDos X cart and manual.

E-mail me if ya happen to have any of above for sale/trade.

It might work, but with the MegaSTE's host adapter you will not be able
to access more than 1 GByte. For more you need an ICD-compatible adapter
like the LINK96/97.

Provided that there are FAT-compatible partitions (i.e. FAT16 or FAT32,
but no NTFS) on this drive you should be able to access them using
HDDRIVER and MiNT or MagiC.

Ok, the DIY screenblaster method is done by putting a clock on the external videl input. Your 25 and 32mhz clocks should be intact - unless your bus has been accelerated (by changing the 32mhz master clock) which also affects the 32mhz RGB as its derived from the master. The 25mhz clock is seperately sourced so it isnt affected.

My 25mhz part gets reasonably warm at 66mhz, but arithmetic tests show that its working OK. I believe a popular phrase in the US is 'YMMV' :-)

If its too hot to touch, then its definately too hot!!! Other than that, run some FPU tests, and keep your finger on it, or use a suitable thermometer. If you start getting math errors then drop the speed.

If your oscillator is getting hot its probably running at too high a voltage. Did you take the +5v from an IC or one end of a capacitor? When I overclocked my DSP the first time (following instructions at atari.nvg.org), I took a metering off one end of the cap thats suggested (C121) and it was 9V! This was during investigation after the DSP stopped working (and the computer wont boot if that happens). I then found that the oscillator had died. I later took the supply from one leg of an IC and changed the osc.

Coda.

I hear ya Martin. I dare not move my Hades eiher, but if I could attend and
bring it, I would. Too bad I am here in the US.

I had a battery clock for my ST and it never worked right consistenly so I took it out. I now use a program that requires me to set the date and time at boot up. Only takes a few seconds.

To find the correct cable try Best Electronics or B&C Computers. They are both
big on Atari items....

The big thing is that the chain will be geared toward adults and not kids. He is suppose to have a game at every table. I just wonder which games he will choose to have.

While drooling over these posts about NAS, I began to wonder if there may be support to have a North American Atari Show? I know there are gaming expos that companies like B&C Computervisions and Best Electronics have supported. How many of you would support an Atari show in the USA? I would be willing to pay $200-300 dollars for registration if we were to fly in a guest like Rodolphe Czuba and have some interesting things to show/discuss/purchase, etc. Chime in!

Honestly, I couldn't afford that much, but I'd be willing to chip in what
I could.

I'm all for the idea of a show, love to go to one and see some of the faces attached to the names! :-)

I understand. :-(

I have to say though - those names you mentioned...well, I'd sum it up like this:

"Here Be Giants"

or maybe even:

"Look on my works, ye mighty, and despair!"

:-)

Atari got split up years ago, I think Atari games are still going, at least when I worked on arcade machines they were still getting new machines out on the market. Its the same old story, they are just "using the name" they have no intention in Atari machines, Why would any company build a 68000 based machine these days ? it would be 10 years out of date. If they did it would be a PC based machine, doubt anyone would invest in a new OS for it, so it would never be a True Atari.

They may develop games with the Atari title, but thats as far as it will go. Though is it "*Really* Atari ? I think not, I have Unreal 2003 with Atari stamped on the box, it aint going run on a Atari machine, so whats the use in it ?! I'm affraid to say that anything with Atari stamped on it is meaningless. I've not worked on the arcade machines for a couple of years now, though the last ones I saw were Jaguar based using the 68000 series CPU. I very much doubt any company would invest in updating that kind of games machine, they would just make it PC based. Big companys don't care about us ppl who are hardcore Atari lovers, all they want is to use the Atari label and thats it. Somewhat easier than trying to make a new brand label known.

Chris

Hi All !

A few days ago I bought this machine:

http://retrospec.sgn.net/users/tomcat/2080/

Yes - its an Atari 2080STf :) Works like a charm, still has the Gaurantie-Seal on the screw. Looks a bit yellowed (unfortunetly) but not too harsh.
The sticker (metal) and the serial plate (see through plastic with ATARI 2080 written mirrored on the back) both look normal Atari quality altough the whole label is in Blue letters.
The guy that sold it to me didn't have any idea that this might be a rarity or anything - he tought 2080's were normal Atari's back then. He bought it from (the only one) official Atari dealer in Slovenia just before they stopped selling ST's here.

What do you think ? Worth keeping ? ;-)

```
Best regards,
  Tomaz

Don't know about the rarity aspect (after all, its just a 2 meg STe, right?) but you can replace the yellowed parts from someplace like:

http://www.best-electronics-ca.com/

Have fun, STe's are great little machines! :-)

Er, just noticed the "f"...thought it said "e" the first time. :-(

I'm not sure about the rarity of this machine at all - hopefully others in the group will know.

See ya.

Afaik only some countries had 2080 in sale, i know that "Mladinska Knjiga" in Slovenia did expand STF to 2mb and exchange stickers to 2080.... I also own one.. If only MK sold thenm it may be preety rare..

Janez

Hey Janez.

Was MK in Slovenia the only "official" distrivuter of Atari computers ?
If so - then mine is also from there :) And would explain a few things.
Did they also exchange Serial Number plates ? Does your 2080 look like
mine does (front and back plate) :

http://retrospec.sgn.net/users/tomcat/2080/

Best regards,
  Tomaz

My guess would be interactive, but hopefully not competitive.  Nolan
has noted in several places that he considers games at their best when
people are working together and interacting.

Galen (who would like a two-player battle game of some sort that had
the two players in the same cockpit.)

I guess the remaining Atari users know very well that illegal copies
mean a lot of damage to what is left of the platform.
By the way, if you are actually an enthusiast, you should support the
platform by using legal copies.

Another good thing about BUYING it is you can get support :) well worth
the price IMHO..BTW anyone know when I find an English Version of the
manual that I can print out? The one that came with mine is German..

Thanks

A better question would be who owns the name Atari now, and do they have
that sort of cash?

What's the story with all the Deuteros disk images for sts and amigas?

A couple of years ago I downloaded Steem and Deuteros for st, and started playing, no trouble.
But when the Methanoids declare war and my research guys come up with the DFCC and drones, the materials needed for these two items are swapped(for anyone who's forgotten: the DFCC is the huge computer/storage container that holds several hundred drones).
So in my game one drone needs 490 tons of material to be built, and a DFCC only needs 6 tons(or is it 8?)!! This makes the game completely unplayable.

The first time this happened I thought, 'ok, this is someone playing a joke'.
So I downloaded a different disk image, and tried it. Same problem, so I gave up.
Yesterday I though 'Why not give the amiga version a try?'. I downloaded WinUAE and the disk images, started playing(a bit slow and

rough compared to Steem), got to the point of having war declared against me, researched drones, and of course, they're the size of a DFCC!
I couldnt believe it. I could understand if most of the st versions were like this, they may have come from the same source, but the amiga also? I am starting to wonder if I am wrong, and it was always like this, maybe a bug in the program that fixes itself later? I have no idea.

Is there someone out there who has a copy(preferably st, but amiga is ok) that does not have the problem I am describing? I would love to get hold of it. I am yet to come across a come with the atmosphere of Deuteros.

Thanks.

Just a quick note on the subject of the TimeKeeper Clock cart and software.

I replaced my battery. No need to solder, in just snaps in.

On my 4meg STE TOS 1.62, I can set the time and date of the clock
like this with the clock set program.

03:23PM
06/01/2005

And every time I run the clock setup, the time and date are displayed in
the
software window correctly like above.

However I have tried 2 different control panels. The very old one and
XControl v1.0
I've not tried the later ones yet.

Both Control panels will display the time correctly but both get the
year wrong.
The day and month seem fine.

Also version 1.0 of Xcontrol will give different years.

The TimeKeeper ACC software that displays the time and date are fine
except for the
year. And it varys with the 2 control panels.

I've not had time to fully test everything but it seems upon boot up the
Control Panel does have an effect on the Date.

So it looks like no only does the STe effect the clock on boot up but
also the
control panel. And maybe other software, depending on what you are
running.

I have gotten the year 2009 displayed with the TimeKeeper ACC software.
Then when I run the Clock set program, it comes back with the correct
Time and Date.

The clock cart appears to keep the correct time and date but more than
one thing is
effecting the ACC setting after bootup.

Now I have used this cart before Y2K and never had a problem like this
with
the Date.

At the moment, I am busy with other projects. When I get time to
experiment more,
I'll post the results if anyone's interested.

Also, the manual does mention something about the control panels causing problems and to use the latest one IIRC.

However this software is old. It's Copyrighted 1986, so I assume thats
about
the time it was written. Thats way before the STe was released.

I don't have a STFM to test it on, I do have a MegaST, with TOS 1.4, I
may try it
on it and see if it will work better. Also need to test latest Xcontrol
Panel.

With a resource editor you could translate all of the RSC files from
German, which would give you an interface in your language, but any
system error messages produced by the OS would still be in German. Also
there might be a flag or two to indicate the OS's language version.

I have English resource files on my web site (DDP section) which may or
may not be of some use to you.

Atari Announces Departure of Chief Executive Officer
Tuesday June 7, 4:21 pm ET

NEW YORK, June 7 /PRNewswire-FirstCall/ -- Atari, Inc. (Nasdaq: ATAR - News), a leader in interactive entertainment, today announced that James Caparro has resigned his position as Atari's President and CEO, effective immediately. The board of directors appointed current Chairman and Chief Creative Officer, Bruno Bonnell, to act as CEO on an interim basis. The board has instituted an immediate search for a permanent President and CEO.
ADVERTISEMENT

As announced by Glenayre Technologies, Inc. in an SEC filing on June 3, 2005, Mr. Caparro entered into an agreement to become the President and

Chief Executive Officer of Entertainment Distribution Corp., a division
of Glenayre.

Bruno Bonnell stated, "Atari has assembled a senior management team
that is moving forward to execute its strategic objectives. The team --
from product development to marketing and sales to finance -- possesses
enormous energy and experience to lead us as we evolve into a more
dominant force in the entertainment industry."

>Yes I will come at the show with my lady and a friend !
>I hope he will get
>time to cook you a special ancestral drink ;-)

sounds nice, then...

Actually for all others here at comp.sys.atari.st I can inform now that we managed to use this school wheres NAS is hosted, to offer all of you accomodation.

You can actually sleep the night on schools floors, so bring the stuff needed.

We (The Swe ATARI association) then hope that this will make you all attend at NAS 2005.

Rodolphe, his wife and a friend of theirs are as we planned welcome to stay at my home and hope that I with help of this beautiful summer town of Gothenburg give you

all a nice unforgetable weekend.

yours,

Mille Babic

Folks,

I have tried many times to play ATARI games on my PC, and its just never had the right "feel" in the Joystick. Any way whilst shopping in my local TESCO I say a TRUST USB Games Pad with a big yellow reduced price sticker on. As I am a sucker for these stickers I bought it for �4.50. What a revelation. Booted up Winston, configured at as the joystick, loaded "Buggy Boy" and its like playing on a real ST except slightly quicker. Could even map the up/down for throttle/brake to the buttons, Wonderful!!!!!!! Managed all five laps of "Off-road" second go. Can't wait to try it with Winter Olympics and Zenon II. (even LLAMATRON).

So if any of you are yearning for a "real" Atari fix you might like to check the Office Supplies section at your nearest Tesco Extra!

Dave.

I get Mega envy everytime I see you post the stats for your Mega. I'd
probably drool if I didn't have a CT60'ed Falcon. :-)

Thats one tricked out Atari, thats for sure!

Any chance we could get some close up internal pics of that beast?

:-)

PIC is the name of Microchip Technology, Inc.'s microcontroller family, not a generic term describing any MCU. So you shouldn't call the ST IKBD controller a PIC since it was made by Hitachi, not Microchip.

The Hitachi chip in question appears to be a clone of the Motorola 6801 with some enhancements. The 6801 was an early 8-bit microcontroller with an instruction set similar to 6502.

Martin,

Sorry, I meant the RSC for the setup application.

Rory

Hi Ronald

If your willing to mortgage your house then you can buy it!

There's not much to see that couldn't be found in the public domain, the PAK and FRAK images are freely available, the graphics card is pretty boring, the SCSI image board is also publicly available, the only unusual thing about it is the SCSI connector on top of the drive bay.

Okay, I'll go googling for PAK and FRAK images. :-)

Thanks!

Hello

I got some problems with STACY, I need to check if the EPROM chips are OK.

Stacy got TOS 1.0 and I can put it to the MEGA STE to try it out but it don�t work. The EPROMS are different but specs tell that its possible to use both type if I change the JUMPERS, so should MEGA STE start-up with STACY EPROMS - TOS 1.0.

If you'd said purse then we'd be talking. Name a price via email, not open bidding here. I paid �2.99 for my present STFM, the scart RGB monitor I pulled out of a skip in Cambridge with an Archimedies attached to it.

The setup application is Gemsetup.
You can download Gemsetup (German/English) from the Belgian
ftp-server.

Hi,

Have just won an SF314 DSDD disk drive on eBay for �1.99 but grrrrrrrrr,
someone outbid me on the PSU for it. Went for about �10+ in the end.
:-(Anyways..

Would anyone have the published power supply pin connections for the SF314?

I think it's a DIN plug.

Have searched a bit on Google so far. This exists in Google's cache; http://64.233.161.104/search?q=cache:evXKMdy1y5kJ:www.atari-forum.com/sutra21346.html%26sid%3D0b5edb96f1ccc9b0e54129ec430aa1b1+SF314+connector&hl=en

Thanks,

techie_alison

Success

I managed to use a Spyrus RD-400 Dual PCMCIA to SCSI adapter containing two DataFab Compact Flash to PCMCIA adaptors, again containing two dirtcheap 256 MB FLashcards from RiData. (www.spyrus.com, www.datafab.com, www.ridata.com).

I had to buy a Link 96 Mega STe from www.wbsystemtechnik.de, Price 56,86 Euros - which includes HDDriver 7.x from Uwe Seimet. The original Atari host adaptor will not work.

Formatting, partitioning and went perfect.
I now have a completely silent and lightning fast STe - and it is the perfect companion for musicmaking.

Download the AFROS disk image from the ARAnyM website and run from that.
It contains a MiNT+XaAES setup.

There should be a couple of Megabyte free in disk image, and IIRC it's
also set up by default to access your Linux file system directly.
Then you can start thinking about other setups later if you want.

>>> And how can I setup a resolution of 800x600?
>> You need FVDI and the needed driver.
>Does FVDI fully replace NVDI 4? Or can I use NVDI instead?

While you could use NVDI by itself, that would mean terribly slow
screen updates and no 24 bit colour (since it would need to use a
normal Atari Falcon mode, which would then need to be converted to
whatever real mode you're using).

However, you can run NVDI "on top" of fVDI (run it after fVDI in the
AUTO folder and remove NVDI's normal screen drivers) to get access to all
the normal NVDI features, like vector font support (which is actually
available in the very latest fVDI (a couple of weeks now), but not yet
fully usable).

>>> I haven't found a documentation for the config file.
>> It seems you didn't read any documentation. All official ARAnyM packages
>> should come with the doc.
>Why isn't there a html Documentation at http://aranym.sourceforge.net/ ?

You'd have to ask whoever is responsible for the web page, but I suppose
it doesn't make much sense when you get it in the installation package,
anyway.

Anyway, as has already been suggested, join the ARAnyM-user mailing list.

>>> Why can't I buy aranym/Linux ready for use with legal TOS404 or TOS492?

You'd have to ask whoever owns the copyright to TOS404 and TOS492.
Since ARAnyM is GPLed, they would certainly be able to sell you an
image of TOS and send along ARAnyM.

>> With Emutos, you can have a totally free system.

>I don't care for a free system, only for a working and useful system.

Then download EmuTOS and the AFROS disk image (or even the live CD,
which will boot directly into ARAnyM).
Changing to TOS404 (if you already own a copy) later is really simple.

>If aranym is not sufficient for me, I will install MagicMac in the
>Basilisk environment to use Atari programs on my Linux PC. The
>installation of Basilisk II and MacOS 7.6 was comparatively simple with
>the excellent setup program.

Please, go ahead. If you already own MagicMac and its speed and features
cover your needs, why not use it?

I think your Stacy is TOS 1.4.

Anyhow, TOS in the STACY (1.2 or 1.4) starts at $FC0000, and TOS in the
MegaSTe (2.0x) starts at $E00000, so they are not interchangeable,

regardless of the fact that they are both contained on 2x 27001 Eproms.

Coda.

I managed to get the CF card working (sorta) in the Stacy, which uses
the same host adapter. Maybe that host adapter was the reason that I
couldnt get it working properly. (It worked great in the TT).

Coda.

Hi,

I'm looking for the Steinberg Cubase Audio for Yamaha CBX-D5.
The only version available is the 1.1 put on Steinberg FTP server,
and I noticed that the executable program is corrupted.

So I'm looking for a person who used this program with his Atari.
I'm interested by an original disk to make it available.

Very difficult task !

Just a quick note: I have permanent write access again, which means I
can continue providing support as before.

The Nordic Atari Computer Show (NAS) 2005

Where? G�teborgs H�gre Samskola in Gothenburg
B�ltgatan 4 (Tram stop "Stampgatan")

When? 2 - 3 July 2005
Saturday, 2 July, 10:00 - 22:00
Sunday, 3 July, 11:00 - 16:00

How to get there?
By car, train or public transport.
See www.vasttrafik.se or www.gulasidorna.se (maps)

What? The main theme for NAS2005 is Accelerated Falcon030 with ct60/63 and EtherNet network card.
Ethernet LAN with access to Internet is available for all who bring their own computers.
Rodolphe Czuba will be attending NAS2005.
Nick Harlow (16/32-Systems) is probably coming.
The brothers Gild� will show the EtherNet network card.
Three Atari-compatible Hades computers will be at NAS.
A number of Atari Falcon030 with both ct60 and Falcon eXtender.
At least two Atari TT030, plus STacy and STF.
ASH-MagiC-PC will be shown with LAN/Internet capability.
64-bit multimedia console Atari Jaguar.
Atari Portfolio.

Entrance fee:
SEK 20 per day to the treasurer Kenneth Medin. (Press free.)

Info: Information posted at http://www.sak.nu/nas Mille Babic's homepage is during June and July entirely devoted to NAS2005. http://mille.atari.org

Lodging:
We can recommend a youth hostel in Gothenburg:
Kvibergs Vandrarhem (Tram 6, 10 minutes from NAS) See http://www.vandrarhem.com Hotel F1 is well-known for its fixed price of SEK 310/night for a room, whether for one or three people in the same room. Perfect for the family. Located in Fr�lunda, telephone 031-492400.
KFUK-KFUM has a summer hostel right next door to NAS, in the former women's jail Gullbrohemmet. It is often used by backpackers and others who want somewhere cheap to stay the night in town.

E-mail: info@sak.nu (Swedish Atari Club) atari@sverige.nu (Mille Babic, NAS05 Coordinator)

Telephone:
0762-100934 during NAS days for directions, help, etc.

Once again it is time for The Nordic Atari Show, this annual gathering that brings us together
to share experiences, talk, and let software and hardware change owners.
It is now the eleventh year in a row that NAS manifests. We really hope that all
expectations will be fulfilled and everyone can express their interest for Atari.
As was the case the previous two years, NAS is again scheduled a weekend in the
vacation month of July.
One large room will host any commercial stands, plus demonstrations by programmers
and other Atari friends. Many different models of Atari and compatibles will be shown.
The largest room will host lectures and exhibitor demonstrations of applications,
system software, games, and hardware solutions.

Other activities will include small competitions of different kinds. It has not yet
been determined which, though likely at least one classic game on an Atari will figure in some way.
Refreshments available on site will consist of soda in cans and coffee.
The event is located in a school, so everyone is expected to follow the rules of
conduct that apply to these premises.

Svenska Atariklubben
In�gogatan 12 (c/o Medin)
418 74 Gothenburg

I can make it this year.
I would love to bring the Hades with me but I just don't dare to move
the Hades around anymore. I probably will pop in somewhere in the
afternoon on saturday. ( after the lady has done some shopping :-) ).

Its June now. Does anyone know if Rodolphe has shipped the latest Rev6
68060s and CTclocks yet?

Eagerly awaiting installing same in my Falcon. ;-)

Thanks.

The Milan has pdi and ISA slots, although all my pci slots are used :-)

Since there are other pci USB cards why not just persuade some nice developer to get involved in the coding ?

Perhaps we should arrange some sort of prize ? Rather like the Hades repair fund with suitable rules to define what is required.

How about something like this:

* uses common/cheap USB card
* works on Milan & Hades
* works with TOS/Mint/Magic
* can be shown to work with an example of each of the following devices:
    + USB keyboard
    + USB mouse
    + USB memory stick
    + USB webcam

Peter

I just received 30 CPU this time and I need 32 to bring them at the factory
to finisj assembling the CT63.
And the other 060 are for people who ordered CTCM + 060.

The CTCM are here ready and programmed and work fine :-)

Sorry for the delays but I'm not in cause...

Regards

Rodolphe

I sent Rodolphe my Falcon m.b. for some installation work (and got the faster rev. 6 chip while I was at it) last month. Rodolphe emailed me four days ago to note that he had sent my Falcon was on its way to me, complete with the rev. 6.

Thus I think it is safe to say that he has begun the process of shipping.

Galen

LOL,
man I'm sure that will be BLAZINGLY fast.  If you want a useful Aranym
system, you'll have to work for it.  Aranym in it's full glory is based on
MiNT, not MagiC, and there's a lot of differences to learn and things to
catch up on.  You'd do well to read all the docs.  Aranym is a small
team... They work on more important things like making Aranym work and
making it useful, rather than a pretty installer.
```

No problem, Rodolphe - I was just wanting a status report.

Many thanks! :-)

PS I was one of those who ordered the clock and rev 6 CPU at the same time.

I will be there with a new version of MyMAIL.

I will also bring lots of computer stuff with me to sell as I have too
much of that at home now.

NAS will also have its own phone exchange (PBX)

 I am doing some research about PCI USB now, and will most probably
attempt something in the near future. No promises, tho. I want to get a
beta release of FreeMiNT/XaAES ready before starting such a project.

>
> Perhaps we should arrange some sort of prize ? Rather like the Hades repair
> fund with suitable rules to define what is required.

 That sounds really nice ;-) However, with the rules below I dont think
I cant enter, since the implementation I want to start working on is
largely based on the Linux (or netbsd, dont know for sure yet) USB stack
implementations. And doing this for other systems than FreeMiNT is out
of the question ... I dont have time. On the positive side, if I can get
one of the above implementations to run under MiNT, we instantly have
USB drivers for most common things ;-)

Hi!

In the past have been asked whether users abroad could order HDDRIVER or
updates and pay with PayPal (http://www.paypal.com). This is possible now.

Best regards,   Uwe

 I emailed with Shiraz Shivji about half a year ago so he's alive. I hope
he's going to be alive at the ST NEWS International Christmas Coding
Convention in 2015... I'd love for him to be the guest of honour.

Dang, you guys make me jealous. :-(

Wish I was:

A. Rich
B. Famous
C. Both

so I could attend! :-)

I some old commercials and such on Videos that I have ordered in the past. My favorites are the ones that Alan Alda did. And then there is the famous one that ends in "Have You Played Atari Today".

My SIO cable is the same except it can connect to the Modem 1 port on my
Hades060 or to the modem port on a ST. I would suggest getting this version of
the SIO cable (the one you have works with APE) or just get an adapter. I have
one such adapter that I bought some months ago. Just google it and order on
the net.

>Getting the Xformer Cable is the biggest problem. They aren't a standard

make them. I think they are on the Net as well.

Yes, they are rare and I know I have one. It is just buried in my closet along
with the rest of my Atari items. Never did use it.

Hi,
```

this emulator appears as a disaster, especially EmuTOS.
Meanwhile I have entered the TOS404.img into the config file but the tos
tries to store the desktop.inf on A: (floppy).
Then I entered into the config for C: and D: the corresponding folders
of the unix directory, but cannot access them from the Atari-Desktop.
Is this caused by the betaDOS missing? Where have I to enter the betaDOS
in this case?
And how can I setup a resolution of 800x600?
And how switch off the RAM test that is done when booting?
And return to Linux without shutting down the Atari?
I haven't found a documentation for the config file.
Why can't I buy aranym/Linux ready for use with legal TOS404 or TOS492?
Please help.

regards, Ludwig

No, in some polish paper mags I read that Shiraz was DEAD, but of course
this is untrue!

Jay Miner gone about 2000 I think.

What you just have to do is to buy a Macintosh with MacOSX.
You then download <http://eureka.atari.org/MacAranym.zip>
It is ready to use, and already configured. Simple !

I hope that I will have helped.

Hi groupies :-)

I was wondering if it was possible to keep the time by applying backup power to the keyboard controller? Was also wondering if the ST booting up would reset the thing (and the time).

At the moment thinking about a 40-pin DIL header plug trailing off to a small board to hold the Hitachi PIC with a couple of NiMH 3.6v charging while the ST is powered.

Any views or experience in this??

Thanks,

Alison C, Cambridge UK

As its a three slots does it have three LUNS on on one SCSI ID or three IDs.
If it as three LUNS will DDRIVER cope, I thought, by default it did two.
If its three ID's does it clash with something else...

If my memory serves me correctly it has three IDs and one LUN.  It
shows up in the boot process, but will not show up to format or
partition.  I can dig it out again and try it, but it is an internal
unit so I have to use an external case/power supply to test it again
at this point.  I'd really like to find one of the external models
that would hopefully work!

Good, I have version 2.36. So I should be alright.

Can't seem to find their URL for CD Recorder 3.

Sounds like a good project to try.

ST clock cartridges all used some type of battery.

Some were very large. I have a Navarone ST/STE Clock cart and
it's the same size as a VideoMaster cartridge, and has a pass thru port.
It includes it's own software. Not sure if you have to use it or not to
keep
the Time/Date correct on the ST/STe.

It needs the battery replaced. Just never got around to soldering in a
new one.

Even though the cartridge is large, I don't recall alot of componets on
the
PCB. And I've seen some carts that are quite small.

I don't see why a internal one wouldn't work. Unless you need a software
patch to keep the date from resetting or something.

Even if thats the case, and you can't program. Maybe some of the
software
from various clock carts would work. It's a long shot but ya never know.

My 2cents.

HDDRIVER does not check more than two logical units (LUNs) and if there
are actually three, which would be unusual, the third LUN will simply be
ignored without any side effects. It will just not be accessible.

AFAIK the time and date are only reset at switch on because there is
no backup clock, although I could be wrong, don't forget that if you
want the date to be correct you have two problems.
1st, you will have to use some kind of 2K fix program to patch the
date as the original clock memory space does not allow for dates

beyond that, its possible that those used with cartridge based battery backed clocks will work.
2nd, even if you can patch the date for system display beyond the year 2000 the year shown on saved files may be either 00 or ** (I can't remember which off hand) not the clock year although this may depend on your TOS version. Anyone know of a software patch that can correct this?

I looked at adding a battery back up to the keyboard controller but abandonded it because I was looking at interupting the power from the Keyboard to motherboard cable and decided that the battery would end up powering the entire keyboard PCB thus creating too large a drain on the battery, plus the file save date problem really rendered the whole thing useless.
Relocating the controller chip to another location is a much better idea, don't know why I did not think of that unless it was because I deemed it too difficult for people to fit themselves.

If the controller chip is in a socket thats not to bad but IIRC it is soldered into the board and thus not easy to desolder without the correct equipment. If you do manage to remover it have you condidered how you are going to enuse that only the controller chip recieves the battery power? If not you could use a diode with a low forward voltage drop (Schottky) that take power form the main supply when the ST is on (forward biased) but blocks the battery power when the main supply is off as it will be reverse biased although a FET wold be better as it will have a lower voltage drop.
I was planning on using alkaline batteries in my design and so have never tried to build a battery charger so I can't help you there but you will have to look at this aspect carefully as charging them slowly might not charge them enough and chraging them quickly may draw to much current from the main supply, plus you will ideally need some charged circuit to stop them from being chrage once thay are at thier maximum capacity.

Stephen Moss

Although I've never tried this myself, you might want to take a look at
the "Real-time clock" archive, available for download from the Misc
section of my website, address in sig.

Hiya :-)

okies, time to go through these one by one.

RE: Clock Cartridges
From what I've found out, clock cartridges ALWAYS require a little bit of software to transfer the clock info stored by the cartridge to the ST.

As for Y2K, I'll get to that in the reply to Stephen.

Aly :-)

Oooooh Y2K, that old hat :-)

Following on from Phantom's post, Y2K seems to only affect the clock cartridges that plug into the cartridge port. Well, the clocks have no problem with Y2K but the software for the cartridges to transfer the info to the system clock are where things fall foul.

There's a site out there where they were talking all about the different TOS versions, saying Y2K affected TOS right upto version 3 or something. Then some bright spark said it was the software for the cartridges which was the problem.

Still haven't got round to getting the language disks and XCONTROL etc. sourced yet so not tried with the system clock directly yet. Next little job :-)

Hi there :-)

Would anyone know of any weblinks of circuit schematics for the STFM AND the MEGA ST?

I'm attempting to unravel the differences between the two with regards to the battery backed clock, namely how the HD6031V1 keyboard controller / MCU is wired up.

http://www.datasheetarchive.com/datasheet/pdf/10/1053099.html
http://www.sothius.com/hypertxt/welcome.html?./additional/1040stfmaddition.html

I've started this thread relating solely to schematics so it can be found later.

Thanks,

Alison C

Battery is on Page3 of the MegaST schematics down in the bottom right.

Following back.... Mmmmmmmm

Heaven knows how that makes it's way to the keyboard controller, perhaps I'm wrong. :-(
